J. M. Adovasio has spent the last thirty years at the center of one of our most fiery scientific debates: Who were the first humans in the Americas, and how and when did they get there? At its heart, *The First Americans* is the story of the revolution in thinking that Adovasio and his fellow archaeologists have brought about, and the firestorm it has ignited. As he writes, "The work of lifetimes has been put at risk, reputations have been damaged, an astounding amount of silliness and even profound stupidity has been taken as serious thought, and always lurking in the background of all the argumentation and gnashing of tenets has been the question of whether the field of archaeology can ever be pursued as a science."

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Through the eyes of an inventor of new markets, *Good Derivatives: A Story of Financial and Environmental Innovation* tells the story of how financial innovation – a concept that is misunderstood and under attack – has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate

Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, *Good Derivatives* will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

Spread out over the Peninsula and the island states of Sabah and Sarawak, Malaysia contains and embraces a huge variety of cultures and cuisines, natural habitats, heritage sites and architectural wonders. Within this diversity there are many extreme contrasts, adding to the excitement of travelling

through the country. Modern skyscrapers overlook wooden houses built on stilts; five-star hotels restaurants compete with street food from hawker stalls; rugged mountain peaks tower over sandy beaches and humid mangroves; bustling cities are juxtaposed with remote rainforests. With around 20% of the world's animal species and thousands of plant species, Malaysia's abundant wildlife is spread throughout the country with notable reserves at Taman Negara, Kinabalu Park, Sabah and Mulu National Park, Sarawak. For those who like to explore the urban landscape, Kuala Lumpur, the capital city, is packed with interesting sights, from the dominant Twin Towers and the surrounding shopping malls to Chinatown and Little India, while George Town on Penang and Melaka on the Peninsula have a maze of historic streets designated as a UNESCO World Heritage Site. Everywhere there is intriguing and irresistible street food. Presenting Malaysia provides an extensive introduction to the geography, history, people, religion, food, and arts and crafts, as well as a visual journey through the 13 states and three federal territories that make up this impressive and always fascinating country.

It is the ancient days of the Persian Empire. Hadassah was content in her quiet life in the Jewish quarter of the city of Babylon with her uncle Mordecai, who had raised her from childhood. But she was old enough to be married, and yet her uncle hadn't arranged a marriage for her. Meanwhile in Shushan, King Ahasuerus' marriage to the vain and selfish Vashti has ended, and a new wife must be found. Why not bring to him the most beautiful women of the kingdom, and let him choose? And so the loveliest young women of the empire are selected in local contests, and Hadassah is among those chosen to go to Shushan to meet the King. But as a Jewess in a foreign land with powerful enemies to her faith, she must conceal her true identity and take the Babylonian name of Esther. Will she find love with a man she has never met? And can she survive in a strict royal court controlled by the evil prime minister Haman, who wants to destroy her people?-Print ed.

Throughout its previous four editions, Combustion has made a very complex subject both enjoyable and understandable to its student readers and a pleasure for instructors to teach. With its clearly articulated physical and chemical processes of flame combustion and smooth, logical transitions to engineering applications, this new edition continues that tradition. Greatly expanded end-of-chapter problem sets and new areas of combustion engineering applications

make it even easier for students to grasp the significance of combustion to a wide range of engineering practice, from transportation to energy generation to environmental impacts. Combustion engineering is the study of rapid energy and mass transfer usually through the common physical phenomena of flame oxidation. It covers the physics and chemistry of this process and the engineering applications—including power generation in internal combustion automobile engines and gas turbine engines. Renewed concerns about energy efficiency and fuel costs, along with continued concerns over toxic and particulate emissions, make this a crucial area of engineering. New chapter on new combustion concepts and technologies, including discussion on nanotechnology as related to combustion, as well as microgravity combustion, microcombustion, and catalytic combustion—all interrelated and discussed by considering scaling issues (e.g., length and time scales) New information on sensitivity analysis of reaction mechanisms and generation and application of reduced mechanisms Expanded coverage of turbulent reactive flows to better illustrate real-world applications Important new sections on stabilization of diffusion flames—for the first time, the concept of triple flames will be introduced and discussed in the context of diffusion flame stabilization
