*Urban Transport XXI* contains the proceedings of the 21st International Conference on Urban Transport and the Environment. The series of annual conferences organised by the Wessex Institute was first held in 1995. Transportation in urban areas, with its related environmental and social impacts, is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems. Urban

transport systems require considerable studies to devise and then safeguard their operational use, maintenance and safety. Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres. Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern, with financial, political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public. Papers cover such topics as: Urban Transport Planning and Management; Urban Transport Strategies; Public Transport Systems; Environmental Aspects; Economic and Social Impact; Safety and Security; Travel Behaviour Studies; Customer Satisfaction; Transportation Modelling and Simulation; Infrastructure Development; Intelligent and Advanced Transport Systems; Transportation Integration; City Logistics; Resilience and Inter-modal Transport Systems; Mass Transport Strategies; Social Impacts; Freight Transport; Railway Systems; Transport Governance and Administration; Port and City; Mobility and Public Space; Life Cycle Management.

Decoded is a book like no other: a collection of lyrics and their meanings that together tell the story of a culture, an art form, a moment in history, and one of the most provocative and successful artists of our time. Praise for Decoded “Compelling . . . provocative, evocative . . . Part autobiography, part lavishly illustrated commentary on the author’s own work, Decoded gives the reader a harrowing portrait of the rough worlds Jay-Z navigated in his youth, while at the same time deconstructing his lyrics.”—Michiko Kakutani, *The New York Times* “One of a handful of books that just about any hip hop fan should own.”—*The New Yorker* “Elegantly designed, incisively written . . . an impressive leap by a man who has never been known for small steps.”—*Los Angeles Times* “A riveting exploration of Jay-Z’s journey . . . So thoroughly engrossing, it reads like a good piece of cultural journalism.”—*The Boston Globe* “Shawn Carter’s most honest airing of the experiences he drew on to create the mythic figure of Jay-Z . . . The scenes he recounts along the way are fascinating.”—*Entertainment Weekly* “Hip-hop’s renaissance man drops a classic. . . . Heartfelt, passionate and slick.”—*Kirkus Reviews* (starred review)

Of the legendary names in the history of the Ford Mustang, one stands apart: Boss. Originally created to homologate the new Boss 302 engine for SCCA Trans-Am racing, the Boss 302 Mustang was built in limited numbers for the street. Designed by legend Larry Shinoda, the Boss cars were easily distinguished from their less potent stable mates by their unique front and rear spoilers, rear window slats, and the omission of the standard Mustang's (fake) rear fender brake ducts. Also standard was a shaker hood scoop and bold graphics. Though Mustang performance faded to all-time lows as the 1970s rolled on, there was good news on the way. The pairing of the venerable 302 Windsor engine with the new Fox-body platform for the 1979 Mustang might not have seemed significant at the time, but it was the first edition of what would become a performance institution in the late 20th century: the 5-liter Mustang was an overwhelming force on the streets and tracks through the end of its production in 1995. With no small amount of fanfare, Ford is paying homage to its performance past with the re-introduction of the 5.0 liter powerplant in the Mustang GT for 2011.

In stepped Preston Tucker, a salesman extraordinaire who announced the building of a revolutionary new car: the Tucker '48, the first car in almost a decade to be built fresh from the ground up. Tucker's car, which would include ingenious advances in design and engineering that other car companies could not match, captured the interest of the public, and automakers in Detroit took notice. Here, author Steve Lehto tackles Tucker's amazing story, relying on a huge trove of documents that has been used by no other writer to date. It is the first

comprehensive, authoritative account of Tucker's magnificent car and his battles with the government. And in this book, Lehto finally answers the question automobile aficionados have wondered about for decades: exactly how and why the production of such an innovative car was killed.

"A visual celebration of the iconic car of Italy's fashionable dolce vita boom years. The Fiat 500, which began production in 1957, is the iconic car of Italy's free-spirited boom years, when Italian films, fashion, and design took the world by storm. The car remains immortalized in America's imagination and is much sought after by collectors and anyone with a nostalgic love for la dolce vita. This book celebrates the 500 for both its groundbreaking design and its role as a pop-culture icon. Despite its diminutive size, it proved to be enormously practical and popular. It was an instant hit with the Cinecitta movie stars as well as with American tourists absorbing Italy's local color. The book features an array of vintage images of the 500, including film stills, paparazzi shots, and advertising, in addition to more serious chapters on design. The publication of this handsome tribute volume is timed with Fiat's release in the United States of its updated version of the car for the twenty-first century, the Fiat Nuova 500"--Publisher's description.

### **Embracing Defeat: Japan in the Wake of World War II**

### **Chevrolet Corvette, 1968-1982**

A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters

firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace. From the Hardcover edition.

Winner of the Pulitzer Prize, the 1999 National Book Award for Nonfiction, finalist for the Lionel Gelber Prize and the Kiriya Pacific Rim Book Prize, *Embracing Defeat* is John W. Dower's brilliant examination of Japan in the immediate, shattering aftermath of World War II. Drawing on a vast range of Japanese sources and illustrated with dozens of astonishing documentary photographs, *Embracing Defeat* is the fullest and most important history of the more than six years of American occupation, which affected every level of Japanese society, often in ways neither side could anticipate. Dower, whom Stephen E. Ambrose has called "America's foremost historian of the Second World War in the Pacific," gives us the rich and turbulent interplay between West and East, the victor and the vanquished, in a way never before attempted, from top-level manipulations concerning the fate of Emperor Hirohito to the hopes and fears of men and women in every walk of life. Already regarded as the benchmark in its field, *Embracing Defeat* is a work of colossal scholarship and history of the very first order. John W. Dower is the Elting E. Morison Professor of History at the Massachusetts Institute of Technology. He is a winner of the National Book Critics Circle Award for *War Without Mercy*.

### **How to Rebuild the Small-Block Ford**

This book will help the private investigator reevaluate business opportunities and identify goals for the future. The world of the private investigator is constantly changing due to the introduction of various legal requirements that have restricted or eliminated some of the methods available for obtaining information such as the various privacy protection acts. Additionally, most private investigators have restricted their business activities to a response mode; that is, conducting inquiries after an incident has occurred. Their preventive skills have been ignored to their financial detriment. As restrictions continue to be placed on private investigative activities, private investigators need to reevaluate personal skills and discover how these may relate to expanding their services. This book provides the necessary information for learning about these new skill areas and provides the necessary strategies for their implementation. Some of the topics cover crime

and loss prevention strategies, risk assessment, and prevention strategies. Many other topics are also covered such as that of the expert witness. This is not a difficult status to attain but requires unique skill sets and experience and can be highly lucrative. Crises management is another skill set that is explored here. It not only identifies potential risk areas through risk assessment activities but includes development and implementation of preventive measures and shows how the private investigator can assist in restoring business operations to their normal levels. This book will be of enormous help to private investigators who wish to develop these sophisticated investigative business skills and preventive services in order to meet these challenges for surviving and thriving in this modern age industry.

### **How to Rebuild & Modify GM Turbo 400 Transmissions**

For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. Transitions to Alternative Vehicles and Fuels assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice.
