of the five Nikayas or collections belonging to the Suttapitaka or the basket of (Buddha`s) discourses which is one of the three majorr collections of Pali Buddhist texts, the other two being Vinayapitaka and Abhidhammapitaka. It consists of 34 long suttas of which each individual one treats intensively some particular point or points of the doctrine. The Buddha, like other Indian teachers of his time, taught by conversation. He followed the literary habit of his time by embodying his doctrine in set phrases, sutras, on which he enlarged on different occasiions in different ways. When the Buddha died these sayings (suttas) were collected together by his disciples into the great Nikayas of which the present one is the first.

competency of the researchers. Such competency needs to be generated and nurtured properly among the researchers from the very beginning of their research career. This comprehensive book on research methodology discusses in detail how to carry out research studies in various disciplines of behavioural sciences in an organized manner. The book is meant for the postgraduate students of Education (M.Ed.), Sociology, Psychology and Management. In addition, it will also be useful to research scholars in learning the art of doing qualitative and quantitative research studies in behavioural sciences. Key Features Systematic and logical organization of the subject matter providing step-by-step description of the research methodology for conducting research studies. Extensively illustrated with working examples, diagrams and tables. A comprehensive description of the essential data collection tools employed in quantitative and qualitative research studies, along with their proper construction, standardization and validation. Complete and workable description of the techniques and methods of data analysis used in quantitative and qualitative research studies. A complete chapter devoted to the use of computer technology for the execution of the quantitative and qualitative research studies.

The Institute Vienna Circle held a conference in Vienna in 2003, Cambridge and Vienna - Frank P. Ramsey and the Vienna Circle, to commemorate the philosophical and scientific work of Frank Plumpton Ramsey (1903-1930). This Ramsey conference provided not only historical and biographical perspectives on one of the most gifted thinkers of the Twentieth Century, but also new impulses for further research on at least some of the topics pioneered by Ramsey, whose interest and potential are greater than ever. Ramsey did pioneering work in several fields, practitioners of which rarely know of his important work in other fields: philosophy of logic and theory of language, foundations of mathematics, mathematics, probability theory, methodology of science, philosophy of psychology, and economics. There was a focus on the one topic which was of

strongest mutual concern to Ramsey and the Vienna Circle, namely the question of foundations of mathematics, in particular the status of logicism. Although the major scientific connection linking Ramsey with Austria is his work on logic, to which the Vienna Circle dedicated several meetings, certainly the connection which is of greater general interest concerns Ramsey's visits and discussions with Wittgenstein. Ramsey was the only important thinker to actually visit Wittgenstein during his school-teaching career in Puchberg and Ottertal in the 1920s, in Lower Austria; and later, Ramsey was instrumental in getting Wittgenstein positions at Cambridge.

she was appointed the 'headman' of Weithaga Location, the first and only female headman of the entire colonial period. The author outlines her character and background, and the kind of leadership Wangu showed her community; and discusses to what extent the stereotypical portrayals of her as a leader - as a whore or personification of evil - are true. The study also assesses the significance in her fall from power of the conflict between traditional society and the colonial political framework within which Wangu worked, as against her own role in her downfall.

Married couples dating couples parents and children teachers and students office workers management and staff business to business There is a simple solution to improving your communication and building better, healthier relationships. It's called Law of Connection. Make it work for you! Are there certain people you cannot seem to communicate with--at home, at work, or in your community? You say one thing, they hear something different. You simply do not understand one another, and you cannot explain why. The only thing you are certain of is that the lack of connection leads to disappointment, frustration, and conflict. Now in LAW OF CONNECTION, Michael J. Losier gives you the key to successful communication. Using the principles of Neuro-Linguistic Programming (NLP), you will soon master the few simple skills needed to create better understanding with people in every aspect of your life. With tips, tools, exercises, and scripts to guide you, you will discover: --the three conditions for connecting --techniques for calibrating your conversations --four easy methods for effective communication --tips for creating positive rapport in all kinds of situations --a special section for teachers, trainers, and anyone who makes group presentations. As a leading member of the Vienna Circle, Rudolph Carnap's aim was to bring about a "unified science" by applying a method of logical analysis to the empirical data of all the sciences. This work, first published in English in 1934, endeavors to work out a way in which the observation statements required for verification are not private to the observer. The work shows the strong influence of Wittgenstein, Russell, and Frege.
