Research paper from the year 2009 in the subject Business economics - Company formation, Business Plans, grade: 1, London Metropolitan University, language: English, abstract: iBus(r) will offer an exciting new service for music enthusiasts by combining the special features of an Apple store with those of an internet cafe. iBus(r) is a mobile entertainment hub that will tour all of the UK's finest festivals and gigs. iBus(r) will be a magnet for the iPod generation of today, enabling customers to either download exclusive iBus(r) iTunes, surf the net or purchase first-class Apple merchandise. iBus(r) is the answer to the abiding demand of new and creative music ventures. By collaborating with

innovative brand leader Apple, iBus(r) is able to create an exclusive forum for communication and entertainment through the medium of public internet access. In today's increasingly mobile society, fast and easy internet access has quickly become a necessity of life. However at most festivals, internet access is still a rarity, which would make iBus(r) the sole provider of this service. This fact, in addition to the significant demand of iPods and iTunes, presents iBus(r) with a chance to seize this window of opportunity and enter into a profitable

Actor-Network Theory and Technology Innovation: Advancements and New Concepts provides a comprehensive look at the development of actor-network theory itself, as well as case studies of its use to assist in the explanation of various socio-technical phenomena. This book includes topics relating to technological innovation; both those using actor-network theory as an explanatory framework and those using other approaches. It is an excellent source of information regarding ANT as an approach to technological innovation and its link to ICT

(Information Communication Technology).

MacLife is the ultimate magazine about all things Apple. It's authoritative, ahead of the curve and endlessly entertaining. MacLife provides unique content that helps readers use their Macs, iPhones, iPods, and their related hardware and software in every facet of their personal and professional lives.

Bibliography of Scientific and Industrial Reports

This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it

works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.
