Running on my knees is about making decisions and choices and the affect those decisions and choices have on your life and the lives of other people. Decisions and choices are powerful and should not be made in haste or under duress. They should never be made without careful thinking or having a plan of action. Whatever the decision or choice you make, it's life-changing for better or for worse; maybe you will find out the moment the decision is made or perhaps you discover the effects later. Either way, decisions change lives and alter paths.

However, the "tree" of k now ledge of m athemat i cs and re I ated fie I ds does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, COding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. The first collection of short stories are deeply personal in nature, all located in Mumbai- its folds and seams- which the writer has explored all his life. Familial bond or the lack of them, an intimate dekko at a media group's machinations, a close study of the Irani community which is fast vanishing in the metropolis, the underworld and the staggeringly bold new world of sexual relationships sparked by websites are just some of the narratives, with a twist in the tale. KHALID MOHAMED started as reviewer and co-editor, during his teenage years for close-up, a film society magazine. He reviewed television for The Economic Times basides contributing articles to The Illustrated Weekly of India and Femina. His writing has writing has also featured in India Today,The Indian Express, The Telegraph, the international film weekly Variety and in Sunday Observer, London. He was film critic for Mid-day, Senior Editor of DNA newspaper, and National Culture Editor and film critic for Hindustan Times. Currently, he is Consulting Editor to the Deccan Chronicle media group. He wrote the original stories and screenplays and also directed the films Fiza, Tehzeeb and Silsilaay . He debuted recently as a playwright and director of the stageplay Kennedy Bridge. His documentary The Last Irani Chai has been screened widely. His second documentary Smiles and Tears on Mumbai's street children is under post-production. Presently, he is writing his second stageplay and his first novel.

Getting Started with Sensors

To build electronic projects that can sense the physical world, you need to build circuits based around sensors: electronic components that react to physical phenomena by sending an electrical signal. Even with only basic electronic components, you can build useful and educational sensor projects. But if you incorporate Arduino or Raspberry Pi into your project, you can build much more sophisticated projects that can react in interesting ways and even connect to the Internet. This book starts by teaching you the basic electronic circuits to read and react to a sensor. It then goes on to show how to use Arduino to develop sensor systems, and wraps up by teaching you how to build sensor projects with the Linux-powered Raspberry Pi.

Nonlinear Stochastic Operator Equations

Sharkey Ward commanded 801 Naval Air Squadron, "HMS Invincible", during the Falkland War of April to June 1982, and was senior Sea Harrier adviser to the command on the tactics, direction and progress of the air war. He flew over 60 war missions, achieved three air-to air kills, and took part in or witnessed a total of ten kills; he was also the leading night pilot, and was decorated with the Distinguished Service Cross for gallantry. But what, after all, could 20 Sea Harriers, operating from a flight-deck bucketing about in the South Atlantic, do against more than 200 Argentine military aircraft flown by pilots who, as the raids against the British shipping proved, displayed enormous skill and almost suicidal gallantry? The world knows the answer - now. What is puzzling, therefore, is this book's truthful depiction of the attitudes of some senior non-flying naval officers, and of the RAF, towards the men (and indeed the machine) that made possible the victory in the Falklands. This first-hand account charts, in detail, the naval pilots' journey to the South Atlantic, and how they took on and triumphantly conquered the challenges they faced. It is a dramatic story, leavened with accounts of the air-to-air fighting and of life in a squadron at sea and on a war footing. But it is also a tale of inter-Service rivalry, bureaucratic interference, and the less-than-generous attitudes of a number of senior commanders who should certainly have known better; indeed, some of them might even have lost the war through a lack of understanding of air warfare. The author attempts to put the record straight.

Nonlinear Stochastic Operator Equations deals with realistic solutions of the nonlinear stochastic equations arising from the modeling of frontier problems in many fields of science. This book also discusses a wide class of equations to provide modeling of problems concerning physics, engineering, operations research, systems analysis, biology, medicine. This text discusses operator equations and the decomposition method. This book also explains the limitations, restrictions and assumptions made in differential equations involving stochastic process coefficients (the stochastic operator case), which yield results very different from the needs of the actual physical problem. Real-world application of mathematics to actual physical problems, requires making a reasonable model that is both realistic and solvable. The decomposition approach or model is an approximation method to solve a wide range of problems. This book explains an inherent feature of real systems—known as nonlinear behavior—that occurs frequently in nuclear reactors, in physiological systems, or in cellular growth. This text also discusses stochastic operator equations with linear boundary conditions. This book is intended for students with a mathematics background, particularly senior undergraduate and graduate students of advanced mathematics, of the physical or engineering sciences.

Appointed is a recently recovered novel written by William Anderson and Walter Stowers, two of the editors of the Detroit Plaindealer, a long-running and well-regarded African American newspaper of the late nineteenth century. Drawing heavily on nineteenth-century print culture, the authors tell the story of John Saunders, a college-educated black man living and working in Detroit. Through a bizarre set of circumstances, Saunders befriends his white employer's son, Seth Stanley, and the two men form a lasting, cross-racial bond that leads them to travel together to the American South. On their journey, John shows Seth the harsh realities of American racism and instructs him in how he might take responsibility for alleviating the effects of racism in his own home and in the white world broadly. As a coauthored novel of frustrated ambition, cross-racial friendship, and the tragedy of lynching, Appointed represents a unique contribution to African American literary history. This is the first scholarly edition of Appointed, and it includes a collection of writings from the Plaindealer, the authors' short story "A Strange Freak of Fate," and an introduction that locates Appointed and its authors within the journalistic and literary currents of the United States in the late

nineteenth century.
