Essentials of Accounting for Governmental and Not-for-Profit Organizations

Ethical Obligations and Decision-Making in Accounting gives students a robust ethical framework that is crucial for accountants in the post-Enron era. Incorporating the principles of the AICPA code and other systems of ethics, Mintz and Morris show accounting students how a commitment to ethics can enable accounting professionals to meet their ethical obligations both to investors and creditors. No other book so comprehensively examines the elements of the financial reporting system - including the ethics of the internal control environment and the effectiveness of board of director and audit committee oversight - that determine the ethical standard of the accounting process.

The main focus of this text is on the preparation of external financial statements which is a challenge for governmental reporting. The approach in this edition is similar to that used in practice. Specifically, day to day events are recorded at the fund level using the basis of accounting for fund financial statements. Governmental activities are recorded using the modified accrual basis. The fund-basis statements are then used as input in the preparation of government-wide statements. The preparation of government-wide statements is presented in an Excel worksheet.

The Tenth Edition of Auditing continues to provide students a balanced presentation of auditing concepts and procedures. The text reflects the challenges inherent in accounting and auditing practice, particularly in public accounting firms. The text is designed to provide flexibility for instructors; the thirteen chapters focus on the Auditing Process while the eight modules provide additional topics. There are three main approaches to teaching auditing, which you need to understand to match customer needs with our texts: 1. The Balance Sheet Approach-smallest market segment and more traditional, which teaches the audit procedures by using the individual balance sheet (and related income statement) accounts. Our Whittington/ Pany text is the only one left in this segment. 2. The Audit Risk Model. This is an emerging area in auditing that considers audit risk,

which is the probability that an auditor will give an inappropriate opinion on financial statements. 3. The Cycles Approach, which was first introduced by the market-leading textbook written by Arens/Loebbecke (Prentice Hall). Cycles are sets of accounts and business activities that go together in an accounting system. This is where Robertson fits in the market.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community.
