Use this study tool to master the content from your Today's Medical Assistant: Clinical & Administrative Procedures, 2nd Edition textbook! Corresponding to the chapters in the textbook by Kathy Bonewit-West, Sue Hunt, and Edith Applegate, this study guide helps you understand and apply the material with practical exercises, activities, flashcards, checklists, review questions, and more. Chapter assignment tables at the beginning of chapters guide you through textbook and study guide assignments, and make it easy to track your progress. Laboratory assignment tables list the procedures in each chapter, including study guide page number references, and indicate the procedures shown on the DVDs. A pretest and posttest in each chapter measure your understanding with 10 true/false questions. Key term assessments include exercises to help in reviewing and mastering new vocabulary. Evaluation of Learning questions let you assess your understanding, evaluate progress, and prepare for the certification examination. Critical thinking activities let you apply your knowledge to real-life situations. Practice for Competency sections offer extra practice on clinical skills presented in the book. Evaluation of Competency checklists evaluate your performance versus stated objectives and updated CAAHEP performance standards. Updated content includes exercises for topics such as electronic medical records, advanced directives, HIPAA, emergency preparedness, ICD-10 coding, documentation, medical office technology, medical asepsis, vital signs, pediatrics, colonoscopy, IV therapy, and CLIA waived tests. New activities provide practice for the Today's Medical Assistant textbook's newest and most up-to-date content. New Emergency Protective Practices for the Medical Office chapter includes procedures, critical thinking questions, and other activities to help you understand emergency preparedness. New Wheelchair Transfer Procedure and Evaluation of Competency checklist includes a step-by-step guide to this important procedure. New video evaluation worksheets on the Evolve companion website reinforce the procedures demonstrated on the textbook DVDs. New practicum and externship activities on Evolve provide practice with real-world scenarios.

Radiographic Anatomy and Positioning Workbook

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates

critical thinking and clicker questions to help students understand--and apply--key concepts.

Get the most out of your Merrill's Radiographic Atlas with the Workbook for Merrill's Atlas of Radiographic Positioning and Procedures, 13th Edition. Providing plenty of review and practice of the concepts found in the atlas, this workbook contains a wide variety of exercises — including labeling, anatomy identification, short answer, multiple-choice, matching, true and false, fill-in-the-blank, error identification, and more — that focus on the essential terminology, anatomy, and positioning information you need to pass the ARRT exam and thrive in the clinical environment. Correlation with main Merrill's Radiographic Atlas features exercises that support the digital positioning content in the atlas. Wide variety of exercises holds user's interest and provides a variety of interaction with the content. Exercises on identifying errors on radiographs prepare users to evaluate radiographs in clinical situations. Anatomy and positioning exercises provide balanced coverage of both topics. Abundance of labeling exercises ensures users recognize anatomical structures on actual radiographs. Comprehensive self-test at the end of each chapter enable users to accurately gauge their comprehension of the material and measure their own progress. Pathology exercises helps users understand which projections will best demonstrate various pathologies. NEW! New images reflect all the content updates in the main Merrill's text. NEW! Detailed review exercises that cover osteology, anatomy, physiology, arthrology and radiographic examinations NEW! Additional images for identifying essential projections
