Real Research: Research Methods Sociology Students Can Use by Liahna Gordon is an innovative text that takes a holistic approach to the subject by discussing each step in the research process within the context of a particular method. After an opening chapter that surveys different methods of data collection and the components of research, students proceed immediately to chapters on specific methods. Each of these chapters begins with a description of the method and the

logic that underlies it, so that students can see how each step in the research process fits within the logic of that particular method. The chapters then go on to present all of the steps of research as they relate to that particular research method, from writing research questions through analysis. With this format, instructors can begin engaging students in hands-on exercises almost immediately, increasing interest in and comprehension of the material.

Covers topics including active and passive money management, fundamental analysis and portfolio attribution analysis Companion streaming videos show how to use free online data to create your own analyses of key economic indicators, individual stocks, and stock portfolios A valuable resource for universities who have applied equity analysis and portfolio management courses Practical and up-to-date, the book is an excellent resource for those with a need for practical investment expertise.

How insights from the social sciences, including social psychology and economics, can improve the design of online communities. Online communities are among the most popular destinations on the Internet, but not all online communities are

equally successful. For every flourishing Facebook, there is a moribund Friendster—not to mention the scores of smaller social networking sites that never attracted enough members to be viable. This book offers lessons from theory and empirical research in the social sciences that can help improve the design of online communities. The authors draw on the literature in psychology, economics, and other social sciences, as well as their own research, translating general findings into useful design claims. They explain, for example, how to encourage information contributions based on the theory of public goods, and how to build members' commitment based on theories of interpersonal bond formation. For each design claim, they offer supporting evidence from theory, experiments, or observational studies.

Advice Online presents a comprehensive study of advice-giving in one particular American Internet advice column, referred to as 'Lucy Answers'. The discursive practice investigated is part of a professional and educational health program managed by an American university. The book offers a comprehensive literature review of advice in health encounters and other contexts, and uses this knowledge as a basis for comparison. Advice Online demonstrates how qualitative and quantitative research methods can be successfully combined to arrive at a comprehensive analysis of a discursive practice. It provides essential information

on advice-giving for researchers, academics and students in the fields of (Internet) communication, media studies, pragmatics, social psychology and counseling. With the demands of technology, transparency, and constant connectedness, and calls for higher performance, leaders from the front line to the C-suite face complex dilemmas that cannot be easily denied or postponed. These perplexing, recurring issues are familiar to anyone in a leadership role today, including: How do I balance my functional or business unit goals with the needs of my peers and the whole company? How do I support and promote others while still advancing my own career? How do I emphasize teamwork and still reward the “stars”? Can I really devote enough time and energy to both family and work? These are not “problems” but paradoxes—situations in which there will never be a single correct solution—and while they make many leaders feel overwhelmed and challenged, this remarkable book provides help. The Unfinished Leader is a modern handbook for recognizing, facing, and inspiring others to expose the real issues that underlie

paradoxes in modern organizations. Leaders must first recognize situations they will never be able to “solve” and understand how to confront the barriers—in their own heads and their organizations—that push them towards seeking ultimate solutions that don’t exist. Leading through complexity requires giving up the illusion of control, consistency, and closure, while embracing the reality of being permanently “unfinished.” Drawing from interviews with 100 CEOs and top leaders from a wide range of companies—such as Avon, Nike, Colgate, DeutschePost DHL, Johnson & Johnson, PepsiCo, and many more— The Unfinished Leader provides the mindsets and tools to recognize contradictory requirements, understand competing demands, and still be able to take action. No one can find or even should look for perfect solutions to impossible situations. The Unfinished Leader will help leaders at all levels understand and excel at their true task: guiding themselves and their teams through ongoing paradoxes, reconciling competing outcomes, continually changing and adapting, and thereby building lasting success.

Teaching in a Digital Age

Internet advertising has come off age; yet little is known in research and practice about how digital channel advertising really works. The empirical research in this thesis intends to fill this gap and shed light on the effectiveness of online advertising. Two studies are conducted that focus on multichannel online advertising and search engine advertising, the single-most important online ad channel. In an interdisciplinary approach, both studies first develop comprehensive theoretical models based on existing work in related research fields—for example, marketing and information retrieval. This approach pays off and leads to new and insightful findings: - There are synergies in multichannel online advertising: purchase propensity increases when consumers receive advertising messages through multiple channels. - The channel order can influence the conversion probability. - Click-through rates in search engine advertising are influenced through various keyword criteria on semantic and syntactic level The results of this thesis constitute an important starting point for future research in online advertising. Furthermore, the results enable practitioners to improve the effectiveness of online advertising through a more differentiated campaign management approach.
