Clear information shows clear thinking, and clear thinking informs, influences and impresses. How often do you stare at uninviting and confusing presentations, notes, reports and information packs and get nothing out of them? It doesn't have to be like this. We could all produce amazingly clear work that has incredible impact - if only we knew how. This book shows you how. It is full of ideas, tips and

principles that are simple and easy to implement, yet brilliantly effective. You will never look at a business document in the same way again. And your work will impress the people that matter and get the results you want. It guides you through the most effective ways of using all forms of presenting information - tables, charts, slides, flowcharts, etc. Moon also introduces the new WiT (Words in Tables) approach to give impact to your message on all documents and slides. "I love Jon's work. His tips are hugely useful, his WiT fantastic and ground-breaking, and his book essential reading. If you want to enhance your sales tenders, pitches and slides - if you want to win more business - get into Jon's stuff. It's really, really good." Gavin Duffy, a Dragon on Ireland's "Dragons' Den", top media coach and economics columnist with the Irish Sunday Independent "Every once in a while, simple ideas change business forever - this book is full of such ideas. A must-read if you want to do something about all those impenetrable reports, slides and information packs. This book has all the answers and will redefine how you think about business documents." Dominic Burke, Chief Executive, Jardine Lloyd Thompson Group plc. "This is a vital topic that has been sorely neglected. Jon's book changes that. It is crammed with new ideas that are creative, thoughtful, yet practical and relevant for all disciplines of business. Essential reading for everyone in business! " Dr Jikyeong Kang, Professor of Marketing and Director of MBA Programmes, Manchester Business School. "I've seen Jon's talk and his ideas are full of originality and wisdom. Many ideas are stunningly simple, others are mould breaking. He takes preconceived thinking and turns it

Clara Luna's name means "clear moon" in Spanish. But lately, her head has felt anything but clear. One day a letter comes from Mexico, written in Spanish: Dear Clara, We invite you to our house for the summer. We will wait for you on the day of the full moon, in June, at the Oaxaca airport. Love, your grandparents. Fourteen-year-old Clara has never met her father's parents. She knows he snuck over the border from Mexico as a teenager, but beyond that, she knows almost nothing about his childhood. When she agrees to go, she's stunned by her grandparents' life: they live in simple shacks in the mountains of southern Mexico, where most people speak not only Spanish, but an indigenous language, Mixteco. The village of Yucuyoo holds other surprises, too-- like the spirit waterfall, which is heard but never seen. And Pedro, an intriguing young goatherder who wants to help Clara find the waterfall. Hearing her grandmother's adventurous tales of growing up as a healer awakens Clara to the magic in Yucuyoo, and in her own soul. What The Moon Saw is an enchanting

How to make an IMPACT

In 1995, on the thirtieth anniversary of Tanizaki Jun'ichiro's death, Adriana Boscaro organized an international conference in Venice that had an unusually lasting effect on the study of this major Japanese novelist. Thanks to Boscaro's energetic commitment, Venice became a center for Tanizaki studies that produced two volumes of conference proceedings now considered foundational for all scholarly works on Tanizaki. In the years before and after the Venice Conference, Boscaro and her students published an abundance of works on Tanizaki and translations of his writings, contributing to his literary success in Italy and internationally. The Grand Old Man and the Great Tradition honors Boscaro's work by collecting nine essays on Tanizaki's position in relation to the "great tradition" of Japanese classical literature. To open the collection, Edward Seidensticker contributes a provocative essay on literary styles and the task of translating Genji into a

modern language. Gaye Rowley and Ibuki Kazuko also consider Tanizaki's Genji translations, from a completely different point of view, documenting the author's three separate translation efforts. Aileen Gatten turns to the influence of Heian narrative methods on Tanizaki's fiction, arguing that his classicism, far from being superficial, "reflects a deep sensitivity to Heian narrative." Tzevetana Kristeva holds a different perspective on Tanizaki's classicism, singling out specific aspects of Tanizaki's eroticism as the basis of comparison. The next two essays emphasize Tanizaki's experimental engagement with the classical literary genres--Amy V. Heinrich treats the understudied poetry, and Bonaventura Ruperti considers a 1933 essay on performance arts. Taking up cinema, Roberta Novelli focuses on the novel Manji, exploring how it was recast for the screen by Masumura Yasuzo. The volume concludes with two contributions interpreting Tanizaki's works in the light of Western and Meiji literary traditions: Paul McCarthy considers Nabokovas a point of comparison, and Jacqueline Pigeot conducts a groundbreaking comparison with a novel by Natsume Soseki.

What the Moon Saw

This classic compendium of lunar literature covers moon mythology, worship, superstitions and is of great interest to cultural scholars and mythologists alike. For Man the moon has always exerted a magic and madness. This madness and magic has paid off in the Apollo accomplishments. And still man continues to dream of new worlds to conquer. After the moon, what? Will it be Mars and Venus? While the earth is getting smaller, our universe is growing by leaps and space ships. What could be more timely than a book about the moon! Moon Lore, set the stage for the recent lunar landing almost 100 years ago with its scientific observations such as the one which saw "the surface of the satellite scooped into deep valleys, or spread over with vast walled plains from 130 to 140 miles across. But this timely book according to its author has no pretensions to scientific merit; in fact, he calls it "a compendium of lunar literature in its least scientific branches." He does say, however, that his work "is a contribution to light literature, and to the literature of light.

This compelling study of the Ri-me movement and of the major Buddhist lineages of Tibet is comprehensive and accessible. It includes an introduction to the history and philosophy of the Ri-me movement; a biography of the movement's leader, the meditation master and philosopher known as Jamgön Kongtrul the Great; helpful summaries of the eight lineages' practice-and-study systems, which point out the different emphases of the schools; an explanation of the most hotly disputed concepts; and an overview of the old and new tantras. Jamgön Kongtrul the Great (1813-1899) is a giant in Tibetan history, renowned

for his scholarly and meditative achievements, but also for his energetic yet evenhanded work to unify and strengthen the different lineages of Buddhism. The Ri-me movement, led by Kongtrul and several other leading scholars of the time, was a unifying effort to cut through interscholastic divisions and disputes that were occurring between the different lineages. These leaders sought appreciation of the differences and acknowledgment of the importance of variety in benefiting practitioners with different needs. The Ri-me teachers also took great care that the teachings and practices of the different schools and lineages, and their unique styles, did not become confused with one another. This lucid survey of the Ri-me movement will be of interest to serious scholars and practitioners of Tibetan Buddhism.

fields. Now, in a single volume, the Hargittais have gathered the best and most notable moments of these interviews, creating a survey of the past, present, and future of science, as told by some of the most influential members of many scientific disciplines. Figures like James D. Watson, Francis Crick, and Glenn T. Seaborg share their thoughts in these pages, in a collection that includes 68 Nobel Laureates. Without exaggeration, their backgrounds come from all over the globe: scientists from the United States, the United Kingdom, Canada, France, Germany, Israel, Russia, Sweden, Switzerland, and Taiwan are featured. These interviews discuss many of the most prominent debates and issues in today's scientific climate. Great Minds is a synthesis of scientific thought, as told by some of the most notable scientists of the twentieth and twenty-first centuries.

Bluey and the Great Spirit Moon

This surprising work may well change our ideas about what libertarianism is and what it can be. Tal Scriven elaborates and defends a libertarian theory of social ethics that can support welfare, reverse discrimination, and environmental preservationism; biocentrism, Nietzschean perspectivism, and laws requiring good Samaritanism; and utilitarianism, the social contract theory, and legal moralism - all at the same time. In the process, he offers strikingly original analyses of figures as varied as Plato, Hume, Rousseau, Kant, Mill, Schopenhauer, Nietzsche, and Dewey. The first part of the book articulates a libertarian approach to the ethics of social policy, arguing that the principle of utility should be understood, in judging social policy, through application of the principle of harm, or wrongness. Part II draws on Plato, Nietzsche, and Mill to give an account of ideas relevant to moral reflection on individual lives, analyzing various theories of prudential wisdom that apply to the private realm of purely personal action. Part III deals with our relationship, as individuals and societies, to nature. Scriven argues that nothing logically prevents a well-constructed libertarianism from supporting environmental ethics positions at least as radical as

biocentrism, although he finds deep problems with going as far as ecocentrism and its postmodern variants.

Twice upon a time, Prince Rupert and Princess Julia saved the Forest Kingdom. They have earned the right to live happily ever after. But there's a blue moon on the rise. Hawk and Fisher, famous for their years of keeping the peace in Haven, are really quite happy being legends. They gave up the hero business when they decided they'd grown too old for it. Now they run the Hero Academy, training young hopefuls to be heroes. Legends never die, but it seems they cannot retire, either. Hawk and Fisher's adult children, Jack and Gillian, have been kidnapped. They were taken by the Demon Prince, an old enemy from the Forest Kingdom who challenges the couple to one final battle for their lives. But Hawk and Fisher believe there's another motive behind the abductions, one connected to a case they worked in Haven many years ago—a case they refuse to discuss. They have no choice but to return to the Forest Kingdom, to be Prince Rupert and Princess Julia one last time in one last story—of the kind of things that happen only once in a blue moon.

Knowledge

Amateur astronomy has changed beyond recognition in less than two decades. The reason is, of course, technology. Affordable high-quality telescopes, computer-controlled 'go to' mountings, autoguiders, CCD cameras, video, and (as always) computers and the Internet, are just a few of the advances that have revolutionized astronomy for the twenty-first century. Martin Mobberley first looks at the basics before going into an in-depth study of what's available commercially. He then moves on to the revolutionary possibilities that are open to amateurs, from imaging, through spectroscopy and photometry, to patrolling for near-earth objects - the search for comets and asteroids that may come close to, or even hit, the earth. The *New Amateur Astronomer* is a road map of the new astronomy, equally suitable for newcomers who want an introduction, or old hands who need to keep abreast of innovations. From the reviews: "This is one of several dozen books in Patrick Moore's "Practical Astronomy" series. Amid this large family, Mobberley finds his niche: the beginning high-tech amateur. The book's first half discusses equipment: computer-driven telescopes, CCD cameras, imaging processing software, etc. This market is changing every bit as rapidly as the computer world, so these details will be current for only a year or two. The rest of the book offers an overview of scientific projects

Access Free Clear As The Moon Great And Terrible 6 Chris Stewart

that serious amateurs are carrying out these days. Throughout, basic formulas and technical terms are provided as needed, without formal derivations. An appendix with useful references and Web sites is also included. Readers will need more than this book if they are considering a plunge into high-tech amateur astronomy, but it certainly will whet their appetites. Mobberley's most valuable advice will save the book's owner many times its cover price: buy a quality telescope from a reputable dealer and install it in a simple shelter so it can be used with as little set-up time as possible. A poor purchase choice and the hassle of setting up are why most fancy telescopes gather dust in their owners' dens. Summing Up: Highly recommended. General readers; lower- and upper-division undergraduates."(T. D. Oswalt, CHOICE, March 2005)
