Earth: The Operators' Manual

This User's Manual provides detailed instruction for the design of commercial and high-rise residential buildings to ensure their compliance with ANSI/ASHRAE/IESNA Standard 90.1-2004. In addition, this Manual: encourages the user to apply the principles of effective energy-conserving design when designing buildings and building systems; offers information on the intent and application of Standard 90.1; illuminates the Standard through the use of abundant sample calculations and examples; streamlines the process of showing compliance; provides Standard forms to demonstrate compliance; provides useful reference material to assist designers in efficiently completing a successful and complying design. This Manual also instructs the user in the application of several tools used for compliance with Standard 90.1: the EnvStd computer program used in conjunction with the Building Envelope Trade-Off compliance method; the selection and application of energy simulation programs used in conjunction with the energy cost budget method of compliance. This Manual is intended to be useful to numerous types of building professionals, including: architects and engineers who must apply the Standard to the design of their buildings; plan examiners and field inspectors who must enforce the Standard in areas where it is adopted as code; general and specialty contractors who must construct buildings in compliance with the standard; product manufacturers, state and local energy offices, policy groups, utilities, and others.

Grilling is a science, and it's only when you understand the science of grilling that you can transform it into an art. That's what makes *Mastering the Grill* a standout on the cookbook shelf. From equipment (grill types and tools) to fire (wood, charcoal, or gas) to ingredients (meat, poultry, fish, and vegetables), the authors have shared their impressive grilling know-how to explain the whys and the hows—and guarantee the wows—clearly and comprehensively. In addition to hundreds of tips and techniques, this ultimate guide is packed with how-to illustrations and mouthwatering photographs plus 350 surefire recipes—everything from rubs and marinades to appetizers, entrees, side dishes, and desserts. *Mastering the Grill* is a master class in cooking, destined to become a sauce-stained, well-thumbed classic.

The book—companion to a PBS series—that proves humans are causing global warming and offers a path to the future. Since the discovery of fire, humans have been energy users and always will be. And this is a good thing—our mastery of energy is what separates us from the rest of the animal kingdom and has allowed us to be the dominant species on the planet. However, this mastery comes with a price: we are changing our environment in a profoundly negative way by heating it up. Using one engaging story after another, coupled with accessible scientific facts, world authority Richard B. Alley explores the fascinating history of energy use by humans over the centuries, gives a doubt-destroying proof that already-high levels of carbon dioxide are causing damaging global warming, and surveys the alternative energy options that are available to exploit right now. These new energy sources might well be the engines for economic growth in the twenty-first century.
