The Lord Is--

This is essentially a hair 'bible' from one of the UK's favorite celebrity hairdressers. Covering everything from basic hair care to styling, coloring, getting the right haircut, eating for healthy hair and of course, how to make your hair make you look younger, the book is also full of fascinating information on the psychology of hair. Andrew believes that everyone woman deserves to have shiny happy hair and this fun, glamorous yet practical book will show you how. Illustrated throughout, the book contains a fabulous chapter on 'how to get the look', in which Andrew takes you step-by-step through some fabulous hairstyles, from catwalk ponytail and glamorous up-do to a casual beach look. Throughout the book there are tips for getting the most from your hair, as well as hair myths and hair truths, making this a practical and fun book. Beautifully designed and bursting with personality and advice it is a must for women of all ages.

Letters to My Daughter

The Burden Of Freedom explains that too many people use past oppression to remain mired in hatred and irresponsibility today. The spirit of oppression has specific telltale effects on individuals, communities, and nations. These are identified by Myles Munroe as a hatred for work, laziness, fear, low self-esteem, selfishness, lack of creativity, low initiative, and distrust of those in authority. To break free from these self-replicating cycles of oppression there must be a mental transformation. Paradoxically, freedom requires the need to impose control on self, require more responsibility than slavery, and the decision to accept a destiny of freedom, recognizing the process and discipline that personal and political freedom require. Simply put, The Burden Of Freedom should be available to every citizen and on the shelves of every high-school, college, and community library in the country.

Body Bazaar

The second half of the 20th century and the beginning of the 21st century

witnessed important changes in ecology, climate and human behaviour that favoured the development of urban pests. Most alarmingly, urban planners now face the dramatic expansion of urban sprawl, in which city suburbs are growing into the natural habitats of ticks, rodents and other pests. Also, many city managers now erroneously assume that pest-borne diseases are relics of the past. All these changes make timely a new analysis of the direct and indirect effects of present-day urban pests on health. Such an analysis should lead to the development of strategies to manage them and reduce the risk of exposure. To this end, WHO invited international experts in various fields - pests, pest-related diseases and pest management - to provide evidence on which to base policies. These experts identified the public health risk posed by various pests and appropriate measures to prevent and control them. This book presents their conclusions and formulates policy options for all levels of decision-making to manage pests and pest-related diseases in the future. [Ed.]

Physics for Computer Science Students

"This Handbook is an output of UNEP's work towards the implementation of the 10-Year Framework of Programmes on Sustainable Consumption and Production (SCP). This global edition is based on a pilot edition for Asia and the Pacific region that was developed under the EU funded and UNEP managed Regional Policy Support Component of the SWITCH-Asia programme. It is designed to assist policymakers in developing, implementing, monitoring and evaluating policies that support the transition towards SCP. It includes numerous case studies highlighting SCP opportunities and existing successful initiatives from across the world."--Publisher's description.

Introduction to the Algae

The Complete Poetical Works of Percy Shelley

Very comprehensive text for physiology (algae) and/or limnology (freshwater biology) courses at the junior/senior/grad level.

Mallard Fillmore--

This text is the product of several years' effort to develop a course to fill a specific educational gap. It is our belief that computer science students should know how a computer works, particularly in light of rapidly changing technologies. The text was designed for computer science students who have a calculus background but have not necessarily taken prior physics courses. However, it is clearly not limited to these students. Anyone who has had first-year physics can start with Chapter 17. This includes all science and engineering students who would like a survey course of the ideas, theories, and experiments that made our modern electronics age possible. This textbook is meant to be used in a two-semester sequence.

Chapters 1 through 16 can be covered during the first semester, and Chapters 17 through 28 in the second semester. At Queens College, where preliminary drafts have been used, the material is presented in three lecture periods (50 minutes each) and one recitation period per week, 15 weeks per semester. The lecture and recitation are complemented by a two-hour laboratory period per week for the first semester and a two-hour laboratory period biweekly for the second semester.

Together Always

Extreme Financial Risks

Mary Call has promised her dying father to keep her brother and sisters together forever on the mountain, and never to take any help from strangers. She is

determined to keep her word. No matter what. At first she is sure she can manage. Romey, Ima Dean, and Devola help gather herbs to sell in town; the riches of the mountains will surely keep the family clothed and fed. But then winter comes, fast and furious, and Mary Call has to learn that the land where the lilies bloom is also a cruel and unforgiving place, and it may take more than a promise to keep her family together.

"Clearly elucidates extreme financial risks associated with rare events such as financial crashes. The highlight of the book is the delineation of various copulas in conjunction with financial dependences among different assets of a portfolio. In particular, the insightful discussion on quadrant and orthant dependences casts new light on the connection between marginal models and financial dependence brings a vivid portrayal of the subject." -- MATHEMATICAL REVIEWS

Atomic And Nuclear Physics

Edna Lewis (1916-2006) wrote some of America's most resonant, lyrical, and significant cookbooks, including the now classic *The Taste of Country Cooking*. Lewis cooked and wrote as a means to explore her memories of childhood on a farm in Freetown, Virginia, a community first founded by black families freed from slavery. With such observations as "we would gather wild honey from the hollow of oak trees to go with the hot biscuits and pick wild strawberries to go with the heavy cream," she commemorated the seasonal richness of southern food. After living many years in New York City, where she became a chef and a political activist, she returned to the South and continued to write. Her reputation as a trailblazer in the revival of regional cooking and as a progenitor of the farm-to-table movement continues to grow. In this first-ever critical appreciation of Lewis's work, food-world stars gather to reveal their own encounters with Edna Lewis. Together they penetrate the mythology around Lewis and illuminate her legacy for a new generation. The essayists are Annemarie Ahearn, Mashama Bailey, Scott Alves Barton, Patricia E. Clark, Nathalie Dupree, John T. Edge, Megan Elias, John T. Hill (who provides iconic photographs of Lewis), Vivian Howard, Lily Kelting, Francis Lam, Jane Lear, Deborah Madison, Kim Severson, Ruth Lewis Smith, Toni Tipton-Martin, Michael W. Twitty, Alice Waters, Kevin West, Susan Rebecca White,

Caroline Randall Williams, and Joe Yonan. Editor Sara B. Franklin provides an illuminating introduction to Lewis, and the volume closes graciously with afterwords by Lewis's sister, Ruth Lewis Smith, and niece, Nina Williams-Mbengue.

Gratitude Journal

Forecasting the Environmental Fate and Effects of Chemicals is the first book to address specifically the issue of forecasting in environmental toxicology and chemistry from a methodological, regulatory and practical perspective. It is becoming increasingly important for environmental toxicologists and chemists to be able to forecast the fate and effects of chemicals by using existing information to predict the future. Providing a unique and timely opportunity for active researchers and students to obtain in a single volume the 'state of the art' in this expanding field, this text discusses how forecasts can be made by: * using ecotoxicological endpoints at different levels of biological organisation * measuring and modelling chemical fate in biotic and abiotic environments * adopting difference quantitative frameworks Written by an international team of scientists, this text will be essential reading for postgraduate and advance undergraduate students studying ecotoxicology, toxicology, chemistry and environmental statistics aswell as industrial and academic research scientists in environmental toxicology, environmental chemistry and those involved in risk management.

Molecular models are as vital a tool for the study of chemistry as calculators are for the study of mathematics. Molecular Visions models may be assembled in infinite combinations enabling the user to construct not only familiar configurations but also undiscovered possibilities. Models are intended to inspire the imagination, stimulate thought, and assist the visualization process. They present the user with a solid form of an abstract object that can otherwise only be visualized by the chemist. While chemistry textbooks use letters and graphics to describe molecules, molecular models make them "real". MOLECULAR VISIONS Organic Kit #1 is in a green plastic box, 9"x4"x2"

Crankshaft

There's been a timequake. And everyone—even you—must live the decade between February 17, 1991 and February 17, 2001 over again. The trick is that we all have to do exactly the same things as we did the first time—minute by minute, hour by hour, year by year, betting on the wrong horse again, marrying the wrong person again. Why? You'll have to ask the old science fiction writer, Kilgore Trout. This was all his idea. From the Trade Paperback edition.
