The book is a review of essential skills that an entry-level or experienced engineer must be able to demonstrate on a job interview and perform when hired. It will help engineers prepare for interviews by demonstrating application of basic principles to practical problems. Hiring managers will find the book useful because it defines a common ground between the student's academic background and the company's product or technology-specific needs, thereby allowing managers to minimize their risk when making hiring decisions. Ten Essential Skills contains a series of "How to" chapters. Each chapter realizes a goal, such as designing an active filter or designing a discrete servo. The primary value of these chapters, however, is that they apply engineering fundamentals to practical problems. The book is a handy reference for engineers in their first years on the job. Enables recent graduates in engineering to succeed in challenging technical interviews Written in an intuitive, easy-to-follow style for the benefit of busy students and employers Book focuses on the intersection between company-specific knowledge and engineering fundamentals Companion website includes interview practice problems and advanced material

This book has basic contact information for the trades and technical skills including apprenticeship programs and job websites. I cover community colleges and vocational schools in book #2. The trades are really big because they're always there regardless of what high-tech industries come and go. Whenever I go jogging, I always see the plumbing trucks, the electrical trucks, the contractor trucks, the carpet cleaners, window installers, etc. No matter what happens, people always need those basic services. I looked around for an indepth vocational-trades book. I couldn't find one. Here is my attempt at a good comprehensive vocational trades book. Even in the trades, be very wary about what you decide to go to school for. I've had friends spend a few years taking a certain vocational program like electronic technician

or computer tech only to end up not being able to find a job in their field.
