This text develops Rayleigh's principle in a manner that provides upper and lower estimates of the true value, so that frequencies and critical loads can be determined with close and known degrees of approximation, well within the degree of accuracy usually demanded in engineering problems. Its presentation is accompanied by illustrative examples and rigorous proofs.

#### Proceedings of the Annual Convention of the Association of Land-Grant Colleges

#### Let There Be Light: Engineering, Entrepreneurship and Electricity in Colonial Bengal, 1880-1945

**Proceedings of the second Pan American Scientific Congress, Washington, U.S.A., Monday, December 27, 1915 to Saturday, January 8, 1916 1915- 1916 v. 4**

**Industrial Management**

**US Black Engineer & IT**

This book studies the correlation between technological knowledge and industrial performance, with the focus on electricity, an emerging technology during 1880 and 1945.

**Stonyhurst College, Its Life Beyond the Seas, 1592-1794 and on English Soil, 1794-1894**

**The Michigan Technic**

**Vocational Education**

**Proceedings of the American Society for Engineering Education**

**The American Gas Light Journal**

Technology, the University and the Community: A Study of the Regional Role of Engineering Colleges focuses on the regional role of engineering colleges and suggests some mechanisms for increasing the interaction between the universities, or their colleges of engineering, and the local region. The study examines the problem of not effectively tapping the potential of state universities to bring applied science to the service of state governments. Comprised of four chapters, this book begins with an overview of the engineering college and its environments, together with its two main resources: human beings and information. Traditional views on the roles of engineering colleges are considered, and their impacts on regional development are examined. The next chapter deals with dimensions and models for the various roles of the engineering college and how the activities of the people of the college, including faculty and students, constitute the main areas of impact upon the region. The obstacles that must be overcome to increase the regional involvement of engineering colleges are then discussed by thinking of the university in terms of human and information resources. The final chapter describes some mechanisms for increasing the regional involvement of engineering colleges. This monograph will be of interest to university administrators, local government officials, and educational policymakers.

When Charles Ping first arrived at Ohio University in 1975, the university was experiencing a decline in student enrollment and confronting serious financial challenges. But rather than focusing on its problems, Ping instead concentrated on Ohio University's potential. During the nineteen years that Ping served as president, he guided Ohio University in scholarship, research, and service while substantially increasing the size of the campus through the acquisition of The Ridges. "What attracted me was, essentially, the richness of the campus in people and programs," said Ping. A Conversation about Ohio University and the Presidency, 1975-1994 is an edited version of the transcript of videotaped interviews recorded in May and June 2011. "It is a conversation between two old friends," said Ping of the series of interviews conducted by Sam Crowl, Shakespearean scholar and now trustee professor emeritus.
