Tax Court Reported and Memorandum Decisions

Resumen: Are you a post-graduate student in Engineering, Science or Technology who needs to know how to: Prepare abstracts, theses and journal papers Present your work orally Present a progress report to your funding body Would you like some guidance aimed specifically at your subject area? This is the book for you; a practical guide to all aspects of post-graduate documentation for Engineering, Science and Technology students, which will prove indispensable to readers. Writing for Science and Engineering will prove invaluable in all areas of research and writing due its clear, concise style. The practical advice contained within the pages alongside numerous examples to aid learning will make the preparation of documentation much easier for all students.

This volume is a collection of 16 essays on the NACA and NASA aerospace research projects that received the prestigious Robert J. Collier Trophy. From NACA achievements such as the Whitcomb Area Rule and the NACA Engine Cowling to NASA landmarks such as the first Space Shuttle flight and the Hubble Space Telescope's first servicing mission, this book covers a variety of important NACA/NASA achievements. We recommend it highly for all students interested in aerospace history.

From Engineering Science to Big Science

Memo

A second edition of a popular guide to scientific and technical communication, updated to reflect recent changes in computer technology. This guide covers the basics of scientific and engineering communication, including defining an audience, working with collaborators, searching the literature, organizing and drafting documents, developing graphics, and documenting sources. The documents covered include memos, letters, proposals, progress reports, other types of reports, journal articles, oral presentations, instructions, and CVs and resumes. Throughout, the authors provide realistic examples from actual documents and situations. The materials, drawn from the authors' experience teaching scientific and technical communication, bridge the gap between the university novice and the seasoned professional. In the five years since the first edition was published, communication practices have been transformed by computer technology. Today, most correspondence is transmitted electronically, proposals are submitted online, reports are distributed to clients through intranets, journal articles are written for electronic transmission, and conference presentations are posted on the Web. Every chapter of the book reflects these changes. The second edition also includes a compact Handbook of Style and Usage that provides guidelines for sentence and paragraph structure, punctuation, and usage and presents many examples of

strategies for improved style.

Writing for Science and Engineering

DEC was the creation of its co-founder and president Ken Olsen, who for four decades shaped the cadre of managers and the corporate culture that motivated and enabled one generation after another of creativity and innovation as his company grew from a small team to a global corporation with over 140,000 employees. Fortune Magazine called him "the ultimate entrepreneur". When MGMT MEMO was originally published, most DEC employees couldn't read it. Labelled "For Internal Communication Only", it was only sent to managers, with the understanding that they would communicate the messages to their employees. Now, twenty years after the demise of the company, when there is no longer a need for confidentiality, these documents can help us to remember and relive the challenges, the triumphs, and the camaraderie of that time. Over the course of eleven years, this publication evolved from a collection of short news items to lengthy discussions of the many reorganizations and the reasons behind them, as well as Ken's thoughts on management and corporate culture, his hopes and his advice. It served as a tool for him to deliver messages that he considered important and timely. The articles reflect the dynamics of rapid growth in a fast changing high tech environment: the stress of the ever-urgent need to develop one new product after another and related services, for an ever-expanding range of uses; the need to come up with new ways to connect product to product and people to people, with new kinds of organization and new theories of how to motivate and manage large numbers of people. They repeatedly attempt to redefine the company, as the employee population doubled in size. They recount the struggle to invent not just new products but also new kinds of new products and to find ways to effectively use those same products to develop the next generation of products and to market them and

to help an expanding range of customers who needed our products and services to build their businesses and to create new businesses and invent new kinds of business. How was it possible to manage such an entity in hyper-growth mode, to accurately prophesize changing customer needs and tastes and come up with new products and services that they would need and to be prepared to manufacture products in the volumes required, and to recruit and train the people necessary for all that, and to do all of this in sync, so the money and the resources were available when and where they were needed? How could such an entity -- such a storm of creative activity -- hold together and continue to grow? How was it possible to "manage" it, to deal with one unprecedented challenge after another? How was it possible to foster a core of values, a sense of corporate culture and identity?

MTS Memo

The third edition of this textbook improves on the strengths of the earlier editions both in content and presentation. Of the important features of the textbook is the inclusion of examples from real-world to illustrate use of quality methods in problem solving. A thorough revision is made of the text to make all chapters suitable for self-study as well.
