Introduction to Engineering Design is a completely novel text covering the basic elements of engineering design for structural integrity. Some of the most important concepts that students must grasp are those relating to 'design thinking' and reasoning, and not just those that relate to simple theoretical and analytical approaches. This is what will enable them

to get to grips with *practical* design problems, and the starting point is thinking about problems in a 'deconstructionist' sense. By analysing design problems as sophisticated systems made up of simpler constituents, and evolving a solution from known experience of such building blocks, it is possible to develop an approach that will enable the student to tackle even completely alien design scenarios with confidence. The other essential aspect of the design process - the concept of failure, and its avoidance - is also examined in detail, and the importance not only of contemplating expected failure conditions at the design stage but also checking those conditions as they apply to the completed design is stressed. These facets in combination offer a systematic method of considering the design process and one that will undoubtedly find favour with many students, teaching staff and practising engineers alike.

More than 200 recipes and 45 full-color photographs celebrate 25 years of good eatin' in this original regional Southern cooking classic. A quarter-century ago, while many were busy embracing the sophisticated techniques and wholesome ingredients of the nouvelle cuisine, one Southern loyalist lovingly gathered more than 200 recipes—collected from West Virginia to Key West—showcasing the time-honored cooking and hospitality traditions of the white trash way. Ernie Mickler's much-imitated sugarsnap-pea prose style accompanies delicacies like Tutti's Fancy Fruited Porkettes, Mock-Cooter Stew, and Oven-Baked Possum; stalwart sides like Bette's Sister-in-Law's Deep-Fried Eggplant and Cracklin' Corn Pone; waste-not leftover fare like Four-Can Deep Tuna Pie and Day-Old Fried Catfish; and desserts with a heavy dash of Dixie, like Irma Lee Stratton's Don't-Miss Chocolate Dump Cake and Charlotte's Mother's Apple Charlotte.

Progress in understanding skin diseases has been aided enormously by the use of tissues derived from animals, by studying normal processes in animals, and by the development of animal models. The cellular activities in animals and humans are

remarkably similar and the actual pathological process of an inflammatory skin disease can only be accurately observed and analyzed in a living animal model, and not in any in vitro model system. These factors have led to the regular use of animal tissues and models to allow the disease processes to be studied at a much greater depth. *Animal Models of Human Inflammatory Skin Diseases* features the principles and practices of how to go about studying inflammatory skin diseases using live animal models. On the principle side, the book describes the comparative structure and function of the skin, and the comparative immunology system in animal species commonly used as models. From the practical perspective, it presents a general discussion on methods of experimental animal modeling and contains specific expert experience on individual models. The authors include a detailed method of disease induction for each model, present chapters on comparative histology and immunology, and discuss potential targets of disease intervention. Written by biomedical investigators with first-hand experience in their chosen fields, this book is a valuable guide and reference for investigators in the biomedical and pharmaceutical sciences. It provides an instantaneous comparison between the skin structure and immunology of humans and animals, aiding in the interpretation and application of pathologic and immunologic findings.

In this classic work of women's history (winner of the 1984 Dexter Prize from the Society for the History of Technology), Ruth Schwartz Cowan shows how and why modern women devote as much time to housework as did their colonial sisters. In lively and provocative prose, Cowan explains how the modern conveniences—washing machines, white flour, vacuums, commercial cotton—seemed at first to offer working-class women middle-class standards of comfort. Over time, however, it became clear that these gadgets and gizmos mainly replaced work previously conducted by men, children, and servants. Instead of living lives of leisure, middle-class women found themselves struggling to keep up with ever higher standards of

cleanliness.

Energy Efficiency in Household Appliances

Housing quality is key to the public's health. Translating that simple axiom into action is the topic of this book. In the 30 years since the first edition was published, the nation's understanding of how specific housing conditions are related to disease and injury has matured and deepened. This new edition will enable public health and housing professionals to grasp our shared responsibility to ensure that our housing stock is safe, decent, affordable, and healthy for our citizens, especially those who are particularly vulnerable and who spend more time in the home, such as children and the elderly.

How to Air Condition Your Hot Rod

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.
