No other photographer in modern times has recorded war and its aftermath as widely and unsparingly as Don McCullin. After a childhood in London during the Blitz, and after the hardships of evacuation, McCullin feels his life has indeed been shaped by war. From the building of the Berlin Wall at the height of the Cold War to El Salvador and Kurdistan, McCullin has covered the major conflicts of the last fifty years, with the notable exception of the Falklands, for which he was denied access. His pictures from the Citadel in Hue and in the ruins of Beirut are among the most unflinching records of modern war. The publication of many of his greatest stories in the Sunday Times magazine did much to raise the consciousness of a generation, even if he himself now fears that photographs cannot prevent history from repeating itself. The brutality of conflict returns over and over again. McCullin here voices his despair. McCullin recounts the course of his professional life in a series of devastating texts on war, the events and the power of photography. The conclusion of the book marks McCullin's retreat to the Somerset landscape surrounding his home, where the dark skies over England remind him yet again of images of war. Despite the sense of belonging and even contentment, for him there is no final escape.

Ultimate success in exploiting the genetic capabilities of plants to grow in nutrient-stressed environments of the semi-arid tropics (SAT) requires a holistic view of food systems to ensure that genetic selections for improved yields on nutrient-poor soils will actually be adopted by farmers. This book sets out to address the important issue of how physiological mechanisms of nutrient uptake can best be combined with genetic options to improve the adaptation of crops to low-nutrient availability, thereby enhancing productivity of nutrient poor soils in the semi-arid tropics. The book examines (i) the sustainability of breeding for low-nutrient environments from the viewpoint of three interrelated disciplines; physiology, breeding, and socio-economics, (ii) candidate mechanisms and physiological traits to enhance uptake and utilization efficiencies, (iii) genetic approaches for manipulation of crop plants to enhance root exudation and access nutrients in the rhizosphere, and (iv) field practices and farmers' preferences for crop varieties grown in low-nutrient environments. Finally, the role of modelling in improving nutrient efficiency in cropping systems, recommendations for future research needs and strategies were highlighted. Attended by 50 international participants, this book is the outcome of the workshop held at ICRISAT-India during 27-30 September 1999 to mark the culmination of the Government of Japan/ICRISAT Project.

This book, first published in 2000, provides a comprehensive review of UV radiation effects in the marine environment. A multidisciplinary approach is adopted to discuss all aspects from a physical, chemical and biological perspective. The book begins by describing the attenuation of UV radiation in the atmosphere and sea water, outlining the photochemical reactions involved and highlighting the role that such chemistry can play in influencing the biogeochemical cycling of various elements. The deleterious consequences of such radiation on organisms and strategies adopted to mitigate these harmful repercussions are discussed. The organisms considered range from virus and bacteria through phytoplankton and zooplankton to fish and mammals. The book is aimed at researchers and graduate students in photobiology, photochemistry and environmental science. It will also be useful as a supplementary text for courses in oceanography, climatology and ecology.

Laugh as much as you breathe and love as long as you live. Inspired by the 1950s landmark photographic exhibition 'The Family of Man', M.I.L.K. began as an epic global search to develop a collection of extraordinary and geographically diverse images portraying humanity's 'Moments of Intimacy, Laughter and Kinship' (M.I.L.K.). This search took the form of a global photographic competition in 1999. It was not only the richest in photographic history, but also one of the most significant, drawing participation from 17,000 professional and amateur photographers in 164 countries. In total, over 40,000 images were received by M.I.L.K., including entries from at least four Pulitzer Prize winners. The 300 winning

images were chosen by eminent Magnum photographer Elliott Erwitt, and became the basis for a published collection. Ten years after the original M.I.L.K. competition comes a brand new collection FRIENDSHIP, FAMILY, LOVE & LAUGHTER. One hundred and fifty extraordinary images from around the world, chosen by Elliott Erwitt, continue to celebrate our moments of intimacy, laughter and kinship.

This comprehensive, edited book explores carotenoids and their important functional roles in yeast, bacteria and plants and a profound exposition on the structures of carotenoid molecules, focusing in the first of three parts on the biosynthesis of carotenoids. The regulation of carotenoid biosynthesis in photosynthesis as well as in plant, fruits, storage roots and algae is central to the second part, and discoveries about the function of carotenoids in human health feature in the third and final part. Many helpful illustrations, explanations, overviews and examples help to bring readers up to date on relevant themes including carotenogenic genes, carotenoids in fruits and metabolic engineering. The book explores where carotenoids are synthesized in nature, including in carrots and algae. Contributing expert authors examine enzyme functions and plant models, and analyze the structure of carotenoid molecules. The function of carotenoids in photosynthesis and in photosynthetic organs as well as during fruit ripening are then explored. A whole chapter is dedicated to the latest research on apocarotenoids and further chapters cover interesting and novel themes on plastid development and the epigenetic regulation that affects carotenoid synthesis in plants. The metabolic engineering of carotenoids that has been done in fruits, plants, and seeds is another area that readers can explore, along with evidences on the function of carotenoids in human nutrition, as antioxidants, as in the control of lipid metabolism and in the absorption of carotenoids. This is a highly informative and wide-ranging work which will update researchers in the field, as well as supporting students of plant physiology and biotechnology, as supplementary reading.

Adobe Photoshop Lightroom is truly an awesome program, and the primary editing tool for so many photographers today. But, at some point, you realize that there are things you need to do to your images that Lightroom just can't do. It could be anything from pro-level portrait retouching, to blending two or more images together, to incredible special effects, to removing distracting things in your image, to adding beautiful type to your images, and, well...there are just lots of incredible things you could do...if you just knew Photoshop. Adobe Photoshop is...well...it's Photoshop—this huge, amazing, Swiss Army knife of a program with 70+ tools, and more than a hundred filters. So, compared to Lightroom it seems really complicated, and it could be, but you've got a secret weapon: Scott Kelby. He's the same guy who wrote the world's #1 best-selling book on Lightroom, he's Editor and Publisher of Photoshop User magazine and Lightroom Magazine, and he's here to teach you just the most important, most useful parts of Photoshop—just the stuff that Lightroom can't already do. Once you learn these techniques (all covered in this short, quick, easy-to-use, plain-English guide), it opens a whole new world of productivity and creativity. Here's what you'll learn: Scott tells you flat-out which tools to use, which techniques work best, which ones to avoid, and why. You only really need about 20% of what Photoshop can do, and that 20% is all covered right in this book. The most important layer techniques, and learning layers is like being handed the keys to the candy store—this is where the fun begins, and you'll be amazed at what you'll be able to do, so quickly and easily. Scott's favorite (and most useful) portrait retouching techniques; his favorite special effects for landscape, travel, and people photos; plus which filters are awesome (and which ones waste your time). Also, you'll learn how to mask hair and create super-realistic composites (you'll be amazed when you learn how easy this is), plus how to take advantage of all the latest Photoshop technology, how to leverage the latest features (so you're doing things the easy way), and a bunch of today's most popular techniques (the same commercial looks you're seeing in hot demand), so you'll be using Photoshop like a shark in no time. If you've been saying to yourself, "Ya know, I really should learn Photoshop," you're holding the absolute best book to get you there, coming from the guy who literally wrote the book on Lightroom. He knows how to help you make the most of using these two powerful tools together to take your images (and your fun) to the next level. You are going to love being a Photoshop shark!

Innovation, claims quality consultant Subir Chowdhury, is part of America's DNA. No other country in the world matches America's creative drive and its ability to turn innovative ideas into revolutionary products—from antilock brakes and steel-belted radial tires to sophisticated software and microprocessors. But as fast as we introduce new products, we lose the markets we establish to countries that know how to manufacture higher quality versions for less money. As Japanese and European firms win market share by concentrating on quality, America is

continually forced to rely on innovation to stay ahead. In *The Ice Cream Maker*, Chowdhury uses a simple story to illustrate how businesses can instill quality into our culture and into every product we design, build, and market. The protagonist of the story is Peter Delvecchio, the manager of a regional ice cream company, who is determined to sell its ice cream to a flourishing national grocery chain, Natural Foods. In conversations with the Natural Foods manager, Peter learns how the extraordinarily successful retailer achieves its renowned high standard of excellence, both in the services it provides its customers and in the foods it manufactures and sells. Quality, he discovers, must be the mission of every employee; by learning to listen, enrich, and optimize, he can encourage and sustain the highest levels of quality in everything the company does. Like *Fish!* and *Who Moved My Cheese?* *The Ice Cream Maker* offers an essential and universal lesson about one of industry's foremost challenges in a thoroughly engaging style. For managers and executives, small business owners and entrepreneurs, *The Ice Cream Maker* is a compelling, eye-opening guide to the most effective ways to achieve excellence and become industry leaders on the global stage.
