Journal of Economic Literature

Filled with the rich diversity of human life, yet exceptionally concise, World Regional Geography Concepts humanizes geographic issues by representing the daily lives of women, men, and children in the various regions of the globe. As in their more comprehensive text, World Regional Geography, Lydia and Alex Pulsipher make global patterns of trade and consumption meaningful for students by showing how these patterns affect environments and people at the local level. And at around 450 pages, it remains the ideal length for covering all of the world's regions in one semester.

Approaches to Economic Development

This book explores the foundations of the current economic crisis. Offering a heterodox approach to interpretation it examines the policies implemented before and during the crisis, and the main institutions that shaped the model of advanced economies, particularly in the last two decades. The first part of the book provides

a theoretical analysis of the crisis. The roots of the 'great recession' are divided into fundamentals with origins in financial liberalisation, financial innovation and income distribution, and complementary or contributory factors such as the international imbalances, the monetary policy, and the role of credit rating agencies. Part II suggests various paths to recovery while emphasising that it will be necessary to develop alternative strategies for sustainable economic recovery and growth. These strategies will require genuine political support and a new 'great European vision' to address major issues concerning the EU such as unemployment, structural regional differences and federalism. Drawing on various schools of thought, this book explains the complexities of the crisis through a wider evolutionary-institutional and heterodox framework.
