### Seagrass Ecology

Seagrasses occur in coastal zones throughout the world, in the part of the marine habitat that is most heavily influenced by humans. Decisions about coastal management therefore often involve seagrasses, but a full appreciation of the role of seagrasses in coastal ecosystems has yet to be reached. This book provides an entry point for those wishing to learn about the ecology of this fascinating group of plants, and gives a broad overview of current knowledge, complemented by extensive literature references to guide the reader to more detailed studies.

### The Fortieth Door

The Federal Aviation Administration (FAA) administers oral as well as written exams for pilot certification and flight review. These exam guides teach applicants not only what to expect, but also how to exhibit subject mastery and confidence under the scrutiny of the FAA Examiner. In this series, the most consistent questions asked in each exam are provided in a question-and-answer format, with

information sources for further study. Applicants facing the Instrument Rating oral exams will benefit from the topics discussed and the further study materials provided in this Instrument edition, which have been updated to reflect important FAA regulatory and procedural changes, including new or updated PTS technical subject areas. The Eighth Edition contains a new chapter on the currently hot FAA topic of "scenario-based training" (SBT), written by Arlynn McMahon (author of "Train Like You Fly"). It provides insight into these more-complex questions on how to demonstrate one's grasp of the practical application of flight training. Scenario-based questions are now an integral part of FAA Oral & Practical Exams, and FAA examiners are using them more and more often.

This catalogue of the music of Charles Ives contains 728 entries covering all of the prolific composer's works. James Sinclair's book presents information produced by recent Ives scholarship and generous commentary on each of Ives's compositions. It completes the work begun by musicologist John Kirkpatrick in 1955, when Ives's music manuscripts were deposited in the Yale Music Library. Ives's works are arranged alphabetically by title within genres. Whenever possible, each entry includes the main title and any other titles the composer may have used; the forces required; the duration; headings of movements; publication history; citation of the first known performance and first recording; the derivation of the work, listing music on which it may be modeled or from which it may borrow material; the principal literature treating the piece; and commentary on these and other matters. The catalogue also provides musical incipits for all Ives's extant works, seven appendixes (covering his work lists, 'Quality Photo' lists, his songbooks, a chronology of his life, recordings made by Ives, and his private publications and commercial publishers), three concordances, and four extensive indexes (addresses, names, titles, and musical borrowings).

When looking at a photograph, too often a conversation starts—and, unfortunately, ends—with a statement such as, “I like it.” The logical next question, “Why?”, often goes unasked and unanswered. As photographers, we frequently have difficulty speaking about images because, frankly, we don’t know how to think about them. And if we don’t know how to think about a photograph and its “visual language”—how an image is constructed, how it works, and why it works—then, when we’re behind the camera, are we really making images that best communicate our vision, our original intent? Vision—crucial as it is—is not the ultimate goal of photography; expression is the goal. And to best express ourselves, it is necessary to learn and use the grammar and vocabulary of the visual language.

Photographically Speaking is about learning photography’s visual language to better speak to why and how a photograph succeeds, and in turn to consciously use that visual language in the creation of our own photographs, making us stronger photographers who are able to fully express and communicate our vision. By breaking up the visual language into two main components—“elements” make up its vocabulary, and “decisions” are its grammar—David duChemin transforms what has traditionally been esoteric and difficult subject matter into an accessible and practical discussion that photographers can immediately use to improve their craft. Elements are the “words” of the image, what we place within the frame—lines, curves, light, color, contrast. Decisions are the choices we make in assembling those elements to best express and communicate our vision—the use of framing, perspective, point of view, balance, focus, exposure. All content within the frame has meaning, and duChemin establishes that photographers must consciously and deliberately choose the elements that go within their frame and make the decisions about how that frame is constructed and presented. In the second half of the book, duChemin applies this methodology to his own craft, as he explores the visual language in 20 of his own images, discussing how the intentional choices of elements and decisions that went into their creation contribute to their success.

Evolving from a series of road trips along the Mississippi River, Alec Soth's "Sleeping by the Mississippi captures America's iconic yet oft-neglected "third coast." Soth's richly descriptive, large-format color photographs present an eclectic mix of individuals, landscapes, and interiors. Sensuous in detail and raw in subject, "Sleeping by the Mississippi elicits a consistent mood of loneliness, longing, and reverie." In the book's 46 ruthlessly edited pictures, "writes Anne Wilkes Tucker, "Soth alludes to illness, procreation, race, crime learning art, music, death, religion, redemption, politics, and cheap sex." Like Robert Frank's classic "The Americans, Sleeping by the Mississippi merges a documentary style with a poetic sensibility. The Mississippi is less the subject of the book than its organizing structure. Not bound by a rigid concept or ideology, the series is created out of a quintessentially American spirit of wanderlust.

Alain Briot states that, "The personality of the photographer must be present in the image for an artistic photograph to have value." And in this book he sets out to teach the things that are essential in achieving this goal. Following his successful first book, *Mastering Landscape Photography*, Briot goes beyond the conventional rules of composition and takes on a fresh, new approach to teaching the art of photography. Based upon his personal experiences as an artist, teacher, and photographer, he opens new doors to the reader-doors leading to new ways of seeing and composing images. Briot approaches fine art photography as being a combination of art and technique. In this new book he addresses both of these by presenting artistic and technical information. On the artistic side, Briot introduces artistic concepts that have been rarely, if ever, associated with photography. On the technical side, he presents numerous tools that can help you learn how to create better photographs and provides technical solutions to common photographic problems. The author practices photography as a fine art. What matters most to him is how photography can be used to express feelings and emotions. For Briot, a good photograph must be both artistically inspired and technically excellent. To have just one of these two elements is not enough for a fine art photograph to be successful. Topics include: - How to compose with color, with black and white, and with light - Why you need to consider your audience while composing a photograph - Recreate the emotions you felt when you captured your photographs - How the elements of color-hue, contrast, and saturation-work in your images - How to control the elements that have a visual effect in your photographs - How to draw upon your personal way of seeing and then share your vision - How to diagnose image maladies and apply the proper remedies - How to define a color palette for a specific photograph - How to use compositional elements to develop a personal style Forword by Tony Sweet

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself

has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.

This open access peer-reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University, Adelaide, Australia in November 2016. Content is based on, but not limited to, the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology. The volume consists of contributions from leading international experts as well as up-and-coming early career researchers from around the globe. The content of the book includes recording and analysis of maritime archaeology through emerging technologies, including both practical and theoretical contributions. Topics include photogrammetric recording, laser scanning, marine geophysical 3D survey techniques, virtual reality, 3D modelling and reconstruction, data integration and Geographic Information Systems. The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches. This convergence of digital technologies such as underwater photography and photogrammetry, 3D sonar, 3D virtual reality, and 3D printing has highlighted a pressing need for these new methodologies to be considered together, both in terms of defining the state-of-the-art and for consideration of future directions. As a scholarly publication, the audience for the book includes students and researchers, as well as professionals working in various aspects of archaeology, heritage management, education, museums, and public policy. It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to those in other disciplines who are now engaging with 3D recording and visualization.
