Cut Your Utility Bills in Half

Pulp and Paper Manual of Canada

Journal of Housing

Brands and Their Companies

This step-by-step guide covers every aspect of household wiring. Written by a journeyman electrician with over 50 years of experience. A very good book for the first time do-it-yourselfer.

Consumer Reports

This book forms a complete guide to the installation, maintenance, and service of gas, oil, and electric forced warm air heating systems. It explores in great detail a large base of newer as well as traditional equipment, using the principles and practices of older furnaces as a means of understanding the newer, electronically controlled, high-efficiency furnaces. Topics include climate control; comfort; combustion and fuels; parts common to all furnaces; components of gas-burning furnaces; basic electricity and electrical symbols; schematic wiring diagrams; using electrical test instrument and equipment; external furnace wiring; controls common to all forced air furnaces; gas furnace controls; high-efficiency furnaces;

components of oil-burning furnaces; oil furnace controls; electric heat; estimating the heating load; evaluating a heating system; installation practice; heating system maintenance and customer relations; energy conservation; indoor air quality; zoning; hydronic heating; and heat pumps and integrated systems. For practicing heating/climate control or HVAC technicians as well as anyone interested in heating/climate control.

Human-computer Interaction, INTERACT '03

The Complete Guide to Understanding and Caring for Your Home

Mastering Household Electrical Wiring

Covers environmental controls, home theatre systems, pc-based automation and more.

Heating and Ventilating; Air Conditioning

This work brings together papers written by researchers and practitioners actively working in the field of human-computer interaction. It should be of use to students who study information technology and computer sciences, and to professional designers who are interested in User Interface design.

Human Factors in Product Design

Custom Builder

Manufacturers are becoming more aware of human factors in product design as a major competitive issue. In many product areas, manufacturers have reached a technology ceiling, which simply means that it is increasingly difficult to get ahead of the competition in terms of, for example, functionality, technical reliability or manufacturing costs. As a consequence, design has become a major battleground for manufacturers, and usability is recognized as being a central tenet of good design. This book provides a unique snapshot of current practice in human factors, identifying methods and techniques that work well under tight constraints and providing case study evidence of their effectiveness. The commercial implications of usability are discussed, and special attention is paid to two key trends: inclusive

design and smart products. Inclusive design is about meeting the needs of all users with one design, which includes the elderly and the disabled. Smart products are multi-functional products with electronic interfaces containing a vast array of "helpful" functions. Industrial designers and manufacturing executives will find this text enlightening.
