Regular job searches SUCK! They don't have to if you know what to do. Put yourself in the driver's seat of your job search and get amazing job offers from companies you're dying to work with. After years of coaching students to C-Suite executives at Fortune 500's I developed a custom-tailored job search strategy designed to keep the job seeker engaged in their search and drive the offers they really want, really quickly. About this project: I've spent my career helping senior executives, talented professionals and new graduates find their dream jobs. Their job searches were slow, stalled or even DOA before we met; after just a few weeks of working together, they landed jobs they wanted. And they loved the work we did together. I bottled up the best step-by-step advice from these one-on-one sessions into 120 action-packed pages, just for you. Take it and run. Who should read this book? If you want a new job right now, you need to read this book. If you want to be known in your industry, you need to read this book. If you want your dream employer to create a job for you, you need to read this book. What you'll learn: How to take

back your search and get employers to chase YOU How to take HR/Corporate Recruiters out of the process and get offers directly from hiring managers How to create an undeniable value in the market that will generate offers for you and you alone For Job Seekers: You need a new job right now. I'll show you how to: Use proven strategies to beat out more qualified competition Reignite a dead search Move into a new field Win every interview using a simple, two-step process For Rock Stars: You like where you are, but you have one eye on the next big thing and you want to build your profile. I'll show you how to: Make companies fight over you when they hear your story Stand out to recruiters and executives running "secret searches" Make your current employer beg to give you promotions for fear of losing you to the competition For Students: You're graduating, your loan payments are due and you don't know where to start. I'll show you how to: Beat out your competition, including more seasoned job seekers Get the \$\$\$'s you really deserve instead of taking a salary you can barely live off of Set yourself up for the best promotions and job offers for your entire career Why this book? Most job search advice is terrible. Job searches are miserable. And I could spend every hour of every day of my life advising job seekers and I wouldn't scratch the surface of the need in this area. I want to reach as many people as possible with this message. I want to help job seekers take back control of their search. Everyday people come to me that need my help to find great jobs but they simply can't afford my services. Even with the 10 hours a week that I set aside for pro bono work it doesn't scratch the surface of the demand for real help for job seekers that have

been struggling for months and sometimes, years.

Fundamentals of Aircraft and Rocket Propulsion

Is the Internet the springboard which will take universities into a new age, or a threat to their existence? Will dotcom degrees create new opportunities for those previously excluded, or lead them into a digital dead-end? From UCLA to Columbia, digital technologies have brought about rapid and sweeping changes in the life of the university—changes which will have momentous effects in the decade ahead.

In the first book-length analysis of the meaning of the Internet for the future of higher education, Noble cuts through the rhetorical claims that these developments will bring benefits for all. His analysis shows how university teachers are losing control over what they teach, how they teach and for what purpose. It shows how erosion of their intellectual property rights makes academic employment ever less secure. The academic workforce is reconfigured as administrators claim ownership of the course-designs and teaching materials developed by faculty, and try to lower labor costs in the marketing and delivery of courses. Rather than new opportunities for students the online university represents new opportunities for investors to profit while shifting the burden of paying for education from the public purse to the individual consumer—who increasingly has to work long hours at poorly-paid jobs in order to afford the privilege. And this transformation of higher education is often brought about through secretive agreements between corporations and universities—including many which rely on public funding. Noble locates recent developments within a longer-term historical perspective, drawing out parallels between Internet education and the correspondence course movement of the early decades of the 20th century. This timely work by the foremost commentator of the social meaning of digital education is essential reading for all who are concerned with the future of the academic enterprise.

Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book's first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.

Lockheed Martin's Skunk Works

A major New York Times bestseller by NBC’s Chief Foreign Correspondent Richard Engel—this riveting story of the Middle East revolutions, the Arab Spring, war, and

terrorism seen close up “should be required reading” (Booklist, starred review). In 1997, young Richard Engel, working freelance for Arab news sources, got a call that a busload of Italian tourists was massacred at a Cairo museum. This is his first view of the carnage these years would pile on. Over two decades he has been under fire, blown out of hotel beds, and taken hostage. He has watched Mubarak and Morsi in Egypt arrested and condemned, reported from Jerusalem, been through the Lebanese war, covered the shooting match in Iraq and the Libyan rebels who toppled Gaddafi, reported from Syria as Al-Qaeda stepped in, and was kidnapped in the Syrian cross currents of fighting. Engel takes the reader into Afghanistan with the Taliban and to Iraq with ISIS. In the page-turning *And Then All Hell Broke Loose*, he shares his “quick-paced thrilling adventure story” (Associated Press). Engel takes chances, though not reckless ones, keeps a level head and a sense of humor, as well as a grasp of history in the making. Reporting as NBC’s Chief-Foreign Correspondent, he reveals his unparalleled access to the major figures, the gritty soldiers, and the helpless victims in the Middle East during this watershed time. His vivid story is “a nerve-racking and informative portrait of a troubled region” (Kansas City Star) that shows the splintering of the nation states previously cobbled together by the victors of World War I. “Engel’s harrowing adventures make for gripping reading” (The New York Times) and his unforgettable view of the suffering and despair of the local populations offers a succinct and authoritative account of our ever-changing world.

This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a

downloadable solutions manual will be of further benefit for course instructors.

With the 'Asian Century' now upon us, bringing with it many profound economic and political changes to the world order, it is very timely to assess the state of democracy in the Asian region.
