Check your front tire with a tread gauge for uneven wear all the way around, center and sides of the tread. A slight amount of wear at higher speeds is a maximum amount of weight change during rotation. I don't have the engineering formula but at high speed a 1/16 of an ounce can exert ten pounds of force.

The popularity of electric vehicles is evidenced by the broad range of manufacturers presenting new models of plug-in hybrid and battery vehicles. However, the success of the revolution or, rather, the rebirth of electric vehicles, is hanging by a thread, as it lacks the involvement of a large number of users, and many psychological mechanisms hinder it.

In this paper, an LLC light-emitting diode (LLC LED) driver based on the current-sharing capacitor is presented. In the proposed LED driver, the LLC resonant converter is used to step down the high input voltage, to provide galvanic isolation, to offer a constant current for LEDs. Moreover, the current-sharing capacitor connected to the central-tapped point of the secondary-side winding is

For many years, the process of the nucleation and growth of nanoparticles have been described through the LaMer burst nucleation and following Ostwald ripening to describe the change in the particles size. This process was originally modeled by Reiss with an accepted model being developed by Lifshitz–Slyozov–Wagner, LSW theory. This was considered to be the only theory of nucleation until
