## **Fundamentals of Futures and Options Markets**

Traders Guns and Money is a wickedly comic exposé of the culture, games and pure deceptions played out every day in trading rooms around the world. And played out with other people's money. A sensational insider's view of the business of trading and marketing derivatives, this revised edition explains the frighteningly central role that derivatives and financial products played in the global financial crisis. This worldwide bestseller reveals the truth about derivatives: those financial tools memorably described by Warren Buffett as 'financial weapons of mass destruction'. Traders, Guns and Money will introduce you to the players and the practices and reveals how the real money is made and lost. The global financial crisis took almost everyone by surprise and even now new problems keep appearing and solutions continue to be elusive. In the original version of Traders, Guns and Money, Satyajit Das provided a highly prescient insight into the structure and risk of the world financial system exposing the problems that are becoming

readily apparent. In a 2006 speech – The Coming Credit Crash – Das argued that: "an informed analysis ... shows that risk is not better spread but more leveraged and (arguably) more concentrated.... This does not improve the overall stability and security of the financial system but exposes it to increased risk of a "crash".

acceptable or unacceptable. Data, worksheets, and Python code for the examples is on the author's website. A complete set of PowerPoint slides that can be used by instructors is also on the website. The opening chapter reviews different types of machine learning models. It explains the role of the training data set, the validation data set, and the test data set. It also explains the issues involved in cleaning data and reviews Bayes' theorem. Chapter 2 is devoted to unsupervised learning. It explains the k-means algorithm and alternative approaches to clustering. It also covers principal components analysis. Chapter 3 explains linear and logistic regression. It covers regularization using Ridge, Lasso, and Elastic Net. Chapter 4 covers decision trees. It includes a discussion of the naive Bayes classifier, random forests, and other ensemble methods. Raoul Moati intervenes in the critical debate that divided two prominent philosophers in the mid-twentieth century. In the 1950s, the British philosopher J. L. Austin advanced a theory of speech acts, or the "performative," that Jacques Derrida and John R. Searle interpreted in fundamentally different ways. Their disagreement centered on the issue of intentionality, which Derrida understood phenomenologically and Searle read pragmatically. The controversy had profound implications for the development of contemporary philosophy, which, Moati argues, can profit greatly by returning to this classic debate. In this book, Moati systematically replays the historical encounter between Austin, Derrida, and Searle and the disruption that caused the lasting break between Anglo-American language philosophy and continental traditions of phenomenology and its deconstruction. The key issue, Moati argues, is not whether "intentionality," a concept derived from Husserl's phenomenology, can or cannot be linked to Austin's speech-acts as defined in his groundbreaking *How to Do Things with Words*, but

rather the emphasis Searle placed on the performativity and determined pragmatic values of Austin's speech-acts, whereas Derrida insisted on the trace of writing behind every act of speech and the iterability of signs in different contexts.

The book will explain the mechanics and strategies associated with trading VIX options, futures, exchange trading notes and options on exchange traded notes. As such, many market participants look at the VIX to help understand market sentiment and predict turning points. With a slew of VIX index trading products now available, there are a variety of strategies traders use to speculate outright on the direction of market volatility or to use the products in conjunction with other instruments to create spread trades or hedge their overall risk.
