Big money NCAA basketball had its origins in a many-sided conflict of visions and agendas. On one side stood large schools focused on a commercialized game that privileged wins and profits. Opposing them was a tenuous alliance of liberal arts colleges, historically black colleges, and regional state universities, and the competing interests of the NAIA, each with distinct interests of their own. Kurt Edward Kemper tells the dramatic story of the clashes that shook college basketball at mid-century—and how the repercussions continue to influence college sports to the present day. Taking readers inside the competing factions, he details why historically black colleges and regional schools came to embrace commercialization. As he shows, the NCAA's strategy of co-opting its opponents gave each group just enough just enough to play along—while the victory of the big-time athletics model handed the organization the power to seize control of college sports. An innovative history of an overlooked era, *Before March Madness* looks at how promises, power, and money laid the groundwork for an American sports institution.

Within these narratives are descriptions of both thrilling action on the high seas and the dank interiors of prison ships, where many ended their days. Illustrated with 19 black-and-white period drawings.

### **Thanksgiving Day**

Through a detailed description of the life and activities of the middle-class married woman of London between 1875 and 1900, this study reveals how housewives unwittingly became engines for

change as the new century neared. In marked contrast to the stereotypical depictions of Victorian women in literature and on television, Draznin reveals a woman seldom seen: the stay-at-home housewife whose activities were not much different than those of her counterparts today. By exploring her daily activities, how she cleaned her home, disciplined her children, managed her servants, stretched a limited budget, and began to indulge herself, one discovers the human dimension of women who lived more than a century ago. While most studies of this period consider values, aspirations, and attitudes, this book concentrates on actions, what these women did all day, to provide readers with a new perspective on Victorian life. Late-Victorian London was a surprisingly modern city with a public face of well-lit streets, an excellent underground railway system, and extended municipal services. In the home, gas stoves were replacing coal ranges and household appliances were becoming more common. Having both money to spend and a strong incentive to buy the new laborsaving devices, ready-to-wear clothing, and other manufactured products, the middle-class matron's resistance to change gave way to a rising consumer culture. Despite her nearly exclusive preoccupation with home and family, these urban women became agents for the modernization of Britain.
