With a mix of humor and analysis, a collection of fresh readings, lively assignments, and an enticing design, ReMix is not your ordinary textbook. It asks students to re-examine everyday concepts (such as identity, entertainment, and technology); to question assumptions about everyday life and culture; and to respond critically and creatively to some of the most imaginative projects you'll find in a composition reader. Built on the idea that students live in a do-it-yourself world in which they are the writers, designers, and inventors, ReMix invites students to bring their own creativity into the composition classroom. It inspires them to ask: Why do I think the way I do? What is my relationship to the culture around me? Am I truly, as one advertisement claims, "my playlist"? This question-posing approach allows students to write about culture and identity in a meaningful way.

Line of Control

The FCC's recent controversial decision to roll back

restrictions on media conglomeration produced an outpouring of protest and dissent; more than 700,000 Americans personally registered complaints along with organizations as diverse as NOW and the NRA. In *A Free Press*, Robert McChesney and Ben Scott demonstrate that, like the corporations themselves, criticism of media monopolies has a long tradition. Featuring the work of Upton Sinclair, C. Wright Mills, Walter Lippmann, Noam Chomsky, and many others, this provocative anthology charts such topics as the consolidation of ownership, the role of advertising, and the corruptions of profit. An extensive lead essay contextualizes pieces spanning the Progressive Era to the present day, making it abundantly clear that countering the media oligarchs requires more than token reforms. Must-reading for anyone concerned by corporate consolidation of the media, *A Free Press* reveals the necessity of a radical revision in our perception of the business of media.

Winner of the BAAL Book Prize 2016 The field of "World Englishes" takes on ever more importance in the modern era. Mario Saraceni's *World Englishes: A Critical Analysis* looks at the developments in the field from a critical perspective. It examines the historical, linguistic, ideological and pedagogical aspects in the study of the ever-evolving forms, roles and statuses of English around the world. The principal aim is to offer a critical overview of the field in order both to inform readers about the main issues at stake and to challenge established positions and descriptive/analytical paradigms. The book has four sections, each of which reviews established accounts and offers alternative perspectives on those.

"History" considers representations of the evolution of 'old English' and 'new Englishes' and begins to unveil the strong link between conventional accounts and ideological motivations. "Language" critically examines the traditional notion of 'difference' in the description of varieties of English, and discusses more recent orientations which aim to describe English as a lingua franca and the phenomenon of language hybridity. "Ideology" examines ideological debates around the presence and status of English in the world, such as linguistic imperialism, language ownership and language ecology. The final section, "Pedagogy" discusses pedagogical implications, such

as the choice of appropriate 'models' of English and considers the possibility of teaching English as a fully de-anglicised language.

Born and raised in the Carpathian Mountains Cami had the privilege of the teachings of historical lessons of the elders and the privilege to understand and learn about the Power and Healing Properties of Plants and Herbs since childhood. Growing up, there was never a memory of ever getting a cold or having any allergies, there was always many kinds of homemade syrups and teas. Every time our feet got wet or we came in the house frozen from walking a mile back from school in the snow, there was always a natural organic elixir or tea to boost our immune system. At the age of ten she contracted a form of hepatitis, that year was one of the worst years of her life. She was in and out of the hospital getting sicker with other illnesses, more than any child should bear. But it was not until she left the hospital with her Grandmother's care and the homeopathic remedies finally cured her. This was the year when Cami really gained a serious interest in the herbal remedies. Over the next decade she often gave herbal remedies to

friend's to cure different ailments. There was always great praise for helping and the request to please write down all the herbal knowledge but school and life kept it in her head. At the age of 25 while overexerting herself between medical studies and work, Cami collapsed. This time a more powerful hepatitis. Laying in the hospital in a coma for 46 days, when she finally opened her eyes they told her that the hepatitis case was very dire and her liver was in the last stage. The Doctors gave her few days to live. She left the hospital to go home and live out her final days. On her death bed but under the care of an Guardian Angel, who rushed around to gather natural plants known for helping liver disease and hepatitis, shortly after Cami arrived home she was cured through homeopathic remedies. Today, Cami is living proof that herbal remedies are the Miracle Herbs of Nature and God. All you need is to believe and have patience. Most of the herbal medicine takes a little time to work but there are little to no side effects.

Revised, updated, and rewritten where necessary, but keeping the clear writing and organizational style that made previous editions so popular, *Elements of Environmental Engineering: Thermodynamics and Kinetics, Third Edition* contains new problems and new examples that better illustrate theory. The new edition contains examples with practical flavor such as global warming, ozone layer depletion, nanotechnology, green chemistry, and green engineering. With detailed theoretical discussion and principles illuminated by numerical examples, this book fills the gaps in coverage of the principles and applications of kinetics and thermodynamics in environmental engineering and science. New topics covered include: Green Chemistry and Engineering Biological Processes Life Cycle Analysis Global Climate Change The author discusses the applications of thermodynamics and kinetics and delineates the distribution of pollutants and the interrelationships between them. His demonstration of the theoretical foundations of chemical property estimations gives students an in depth understanding of the limitations

of thermodynamics and kinetics as applied to environmental fate and transport modeling and separation processes for waste treatment. His treatment of the material underlines the multidisciplinary nature of environmental engineering. This book is unusual in environmental engineering since it deals exclusively with the applications of chemical thermodynamics and kinetics in environmental processes. The book's multimedia approach to fate and transport modeling and in pollution control design options provides a science and engineering treatment of environmental problems.
