Who's who

Engineering

A student-friendly introduction to core engineering topics This book introduces mechanical principles and technology through examples and applications, enabling students to develop a sound understanding of both engineering principles and their use in practice. These theoretical concepts are supported by 400 fully worked problems, 700 further problems with answers, and 300 multiple-choice questions, all of which add up to give the reader a firm grounding on each topic. The new edition is up to date with the latest BTEC National specifications and can also be

used on undergraduate courses in mechanical, civil, structural, aeronautical and marine engineering, together with naval architecture. A further chapter has been added on revisionary mathematics, since progress in engineering studies is not possible without some basic mathematics knowledge. Further worked problems have also been added throughout the text. New chapter on revisionary mathematics Student-friendly approach with numerous worked problems, multiple-choice and short-answer questions, exercises, revision tests and nearly 400 diagrams Supported with free online material for students and lecturers Readers will also be able to access the free companion website where they will find videos of practical demonstrations by Carl Ross. Full worked solutions of all 700 of the further problems will be available for both lecturers and students for the first time.

Proceedings of the Institution of Electrical Engineers

Containing authentic biographies of New Yorkers who are leaders and representatives in various departments of worthy human achievement including sketches of every army and navy officer born in or appointed from New York and now serving, of all the congressmen from the state, all state senators and judges, and all ambassadors, ministers and consuls appointed from New York.

Memoirs: from Old Shanghai to the New World

In the U.S.A, the land of immigrants, Where do you come from? is often asked. When Tani Maher couldnt answer questions about her father, she posed her own. With its South American twist, told with puns and witty tales, Anatole Mahers Memoirs takes the reader on his personal voyage through life where he witnesses many of the major historical events of the 20th century. During the high-flying, war-torn epoch of Old Shanghai, into a cocktail of languages, culture and people, Anatole Maher is born. While the British toast the Queen at the exclusive Shanghai Club, the French hold soires at the Cercle Sportif Franais, and other foreigners sashay through Shanghais numerous ballrooms, the Chinese are often treated like third-class citizens. The Japanese want to conquer all of Asia, but the Americans intervene until Maos revolution overruns China, putting a stop to everything. In Memoirs: From Old Shanghai to the New World, Anatole Maher relates his early years in the Pearl of the Orient, a city where strong racial and social lines separate people, the pure bloods from the locals and mixed races, the rich and powerful from the lower, poorer classes. The youngest of seven children whose parents are of Macanese-Japanese descent, Anatole grows up in the culturally diverse International Settlement under the over-protective watch of his eldest sister. Despite the humble, lower-middle class origins of the Mahers, the family have two

Amahs and a cook who live with them. Anatole attends the St. Francis Xavier College, becomes an active member of the Foreign YMCA, and graduates with First-Class honors from the Henry Lester Technical Institute. From early on, various battles and wars disrupt his life. His neighborhood in Hongkew is bombarded several times, but Anatole survives the Japanese Occupation and World War II unscathed. After WWII, he works on a Danish freighter ship to see the world. When he returns to China, the Communists are not yet in Shanghai but are winning one battle after another. Anatole finds a job and waits out the situation until the Communists finally kick him out. Japan is the closest country to take in him and his family. After a short stay in Tokyo, Anatole finds a job, but under the American Occupation all the privileges he once enjoyed in his native Shanghai vanish. In search of a better existence, he decides to join many of his Shanghai buddies who have immigrated to the country of the future, Brazil. In Rio de Janeiro, he marries a Brazilian girl in 1955 and starts a family. His record of quitting jobs is no asset. When the Brazilian military dictatorship becomes increasingly oppressive, he runs into bad luck and gets fired. Under a politically repressive regime, with unstable personal finances, Anatole decides to abandon Brazil in 1967 for the Vietnam-War-fatigued United States. He settles in Jacksonville, Florida, a city with many geographical and climatic similarities to his birthplace Shanghai. As if to compensate for changing jobs and residences so often in the past, he remains at his first job in the U.S., Maxwell House Coffee, for 20 years until his retirement and never again moves from Jacksonville. With 16 grandchildren and six great

grandchildren, Anatole and his wife Nair are still enjoying their retirement in the Sunshine State.

The Electrician

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

The Spectator

Following the success of the 2012 publication 'Going Global: the landscape for policy makers and practitioners in tertiary education', Emerald Group Publishing

Limited are delighted to present 'Going Global: identifying trends and drivers of international education'. 'Going Global: identifying trends and drivers of international education' is edited by Mary Stiasny of the Institute of Education and Tim Gore OBE of the University of London. Published in collaboration with the British Council, the book showcases a selection of edited papers drawn from this year's highly successful Going Global 2012 international education conference in London. Each chapter features contributions from many of the foremost policy makers and industry leaders across the global education industries; offering fresh and diverse perspectives, exploring and reassessing the driving forces, barriers and common strategies of internationalised education.

Who's who in New York City and State

This book is a celebration of women in science, technology, medicine and business at Imperial College London. It shows the inspirational role women played in the creation of the legacy of the College since its inception, and represents a guide to their achievements. Biographies and archive material provide an insight into their academic work and social lives, while first-hand information collected for individual cases gives a comprehensive overview of student and professional life in their diverse fields and subjects. Further careers as academics and businesswomen are also documented, demonstrating the importance of and wider social impact of women in the sciences.

Princeton Alumni Weekly

Issues in Mechanical Engineering / 2012 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Lubrication Technology. The editors have built Issues in Mechanical Engineering: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Lubrication Technology in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Mechanical Engineering: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Building

Natural gas, composed mostly of methane, is the cleanest of all the fossil fuels, emitting 25-50% less carbon dioxide than either oil or coal for each unit of energy produced. In recent years, natural gas supplied approximately 20-25% of all energy consumed in the United States. Methane hydrate is a potentially enormous and as yet untapped source of methane. The Department of Energy's Methane Hydrate Research and Development Program has been tasked since 2000 to implement and coordinate a national methane hydrate research effort to stimulate the development of knowledge and technology necessary for commercial production of methane from methane hydrate in a safe and environmentally responsible way. Realizing the Energy Potential of Methane Hydrate for the United States evaluates the program's research projects and management processes since its congressional re-authorization in 2005, and presents recommendations for its future research and development initiatives.
