The twenty-first century has seen a breathtaking expansion of statistical methodology, both in scope and in influence. 'Big data', 'data science', and 'machine learning' have become familiar terms in the news, as statistical methods are brought to bear upon the enormous data sets of modern science and commerce. How did we get here? And where are we going? This book takes us on an exhilarating journey through the revolution in data analysis following the introduction of electronic computation in the 1950s. Beginning with classical inferential theories - Bayesian, frequentist, Fisherian - individual chapters take up a series of influential topics: survival analysis, logistic regression, empirical Bayes, the jackknife and bootstrap, random forests, neural networks, Markov chain Monte Carlo, inference after model selection, and dozens more. The distinctly modern approach integrates methodology and algorithms with statistical inference. The book ends with speculation on the future direction of statistics and data science.

Stevie Nicks is a legend of rock, but her energy and magnetism sparked new interest in this icon. At 68, she's one of the most glamorous creatures rock has known, and the rare woman who's a real rock 'n' roller. Gold Dust Woman gives "the gold standard of rock biographers" (The Boston Globe) his ideal topic: Nicks' work and life are equally sexy and interesting, and Davis delves deeply into each, unearthing fresh details from new, intimate interviews and interpreting them to present a rich new portrait of the star. Just as Nicks (and Lindsay Buckingham) gave Fleetwood Mac the "shot of adrenaline" they needed to become real rock stars—according to Christine McVie—Gold Dust Woman is vibrant with stories and with a life lived large and hard: —How Nicks and Buckingham were asked to join Fleetwood Mac and how they turned the band into stars —The affairs that informed Nicks' greatest songs —Her relationships with the Eagles' Don Henley and Joe Walsh, and with Fleetwood himself —Why Nicks married her best friend's widower —Her dependency on cocaine, drinking and pot, but how it was a decade-long addiction to Klonopin that almost killed her — Nicks' successful solo career that has her still performing in venues like Madison Square Garden —The cult of Nicks and its extension to chart-toppers like Taylor Swift and the Dixie Chicks

'What is a self and how can a self come out of inanimate matter?' This is the riddle that drove Douglas Hofstadter to write this extraordinary book. In order to impart his original and personal view on the core mystery of human existence - our intangible sensation of 'I'-ness - Hofstadter defines the playful yet seemingly paradoxical notion of 'strange loop', and explicates this idea using analogies from many disciplines.

Math is easy for children. Their little mind is full of curiosities that will suck in any knowledge that parents and teachers are capable to provide. They just have to make sure the knowledge provided is in a way easier for children to absorb and accumulate. The catch of "Practice makes perfect," is that only the proper practice makes the perfect. This is the proper practice workbook which provides ample practices at the proper challenging level for first graders. It contains over 450 well-designed math practices, including over 50 basic word problems. It covers counting, arithmetic, 2D/3D shapes, and learning of time and money. This book helps the first grader to build a strong foundation in math concepts and get ahead of their peers.

The operational amplifier ("op amp") is the most versatile and widely used type of analog IC, used in audio and voltage amplifiers, signal conditioners, signal converters, oscillators, and analog computing systems. Almost every electronic device uses at least one op amp. This book is Texas Instruments' complete professional-level tutorial and reference to operational amplifier theory and applications. Among the topics covered are basic op amp physics (including reviews of current and voltage division, Thevenin's theorem, and transistor models), idealized op amp operation and configuration, feedback theory and methods, single and dual supply operation, understanding op amp parameters, minimizing noise in op amp circuits, and practical applications such as instrumentation amplifiers, signal conditioning, oscillators, active filters, load and level conversions, and analog computing. There is also extensive coverage of circuit construction techniques, including circuit board design, grounding, input and output isolation, using decoupling capacitors, and frequency characteristics of passive components. The material in this book is applicable to all op amp ICs from all manufacturers, not just TI. Unlike textbook treatments of op amp theory that tend to focus on idealized op amp models and configuration, this title uses idealized models only when necessary to explain op amp theory. The bulk of this book is on real-world op amps and their applications; considerations such as thermal effects, circuit noise, circuit buffering, selection of appropriate op amps for

Mathematical circles, with their question-driven approach and emphasis on problem solving, expose students to the type of mathematics that stimulates the development of logical thinking, creativity, analytical abilities, and mathematical reasoning. These skills, while scarcely introduced at school, are in high demand in the modern world. This book, a sequel to Mathematical Circle Diaries, Year 1, teaches how to think and solve problems in mathematics. The material, distributed among twenty-nine weekly lessons, includes detailed lectures and discussions, sets of problems with solutions, and contests and games. In addition, the book shares some of the know-how of running a mathematical circle. The book covers a broad range of problem-solving strategies and proofing techniques, as well as some more

advanced topics that go beyond the limits of a school curriculum. The topics include invariants, proofs by contradiction, the Pigeonhole principle, proofs by coloring, double counting, combinatorics, binary numbers, graph theory, divisibility and remainders, logic, and many others. When students take science and computing classes in high school and college, they will be better prepared for both the foundations and advanced material. The book contains everything that is needed to run a successful mathematical circle for a full year. This book, written by an author actively involved in teaching mathematical circles for fifteen years, is intended for teachers, math coaches, parents, and math enthusiasts who are interested in teaching math that promotes critical thinking. Motivated students can work through this book on their own. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession.

"Hell hath no fury like a mathematician whose child has been scorned by an education system that refuses to know better," Barry Garelick wrote in his first published article on math education in 2005. He has been at it ever since, and his

focus has remained the same: why many of today's practices for teaching math are ineffective and often destructive. This collection brings together some of his best articles on math education over the past ten years. Garelick states: "In writing these articles, I often feel that I am explaining in detail why jumping out of an airplane without a parachute will result in death. And while I am heartened that my readers have found these articles useful, I am also disheartened when I hear the education establishment react with arguments that are tantamount to 'Oh but if you jump out of an airplane the right way, you can survive.' " Nevertheless there is a growing momentum in the U.S. against the well-intentioned but highly injurious nonsense that passes for math education. This collection of articles will assure those people who are convinced that it is being taught poorly that they are right. Reviews: "Barry Garelick is an invaluable source of clear-eyed analysis in a world of math education that is so often given over to fads, agendas, and assorted foolishness. Garelick approaches math instruction, curriculum, and reform with a studious expertise and a wry skepticism that is all too rare. His book will be a welcome resource for parents and teachers frustrated with math education and seeking hard-headed advice on what ought to be done differently." Frederick Hess, Director of Education Policy Studies at American Enterprise Institute "A teacher, a parent and a mathematics major, Garelick's first-hand accounts of his experiences navigating the world of math education are all too familiar to those of us who have experienced the negative impact of educational fads in mathematics classrooms. This book is a must read for parents, teachers and anyone who cares about the

way math is taught in North American schools." Dr. Anna Stokke, associate professor of mathematics at the University of Winnipeg. "Barry Garelick's highly readable volume of essays uses a diverse set of critical lenses to trace the stories of--and convincingly impugn--math-instructional ideals and methods that have not yet come close to fulfilling their proponents' promises. Required reading for anyone growing weary of all the lagging results, faddish terminology, and upside-down approaches they see across American K-12 mathematics instruction." Eric Kalenze, author of "Education is Upside-Down" "Those who criticize traditional methods of teaching math are prone to spout wise-sounding homilies about the need to "teach children to think like mathematicians. Barry Garelick understands that if you want kids to think like a mathematician you need to teach them some math, not wait for them to discover basic procedures on their own. For those stubbornly committed to learning math through discovery, here's hoping they discover Garelick's book." Robert Pondiscio, Senior Fellow and Vice President for External Affairs, Thomas B.
