Detroit in the 1960s was a city with a pulse: people were marching in step with Martin Luther King, Jr., dancing in the street with Martha and the Vandellas, and facing off with city police. Through it all, Motown provided the beat. This book tells the story of Motown--as both musical style and entrepreneurial phenomenon--and of its intrinsic relationship to the politics and culture of Motor Town, USA. As Suzanne Smith traces the evolution of Motown from a small record company firmly rooted in Detroit's black community to an international music industry giant, she gives us a clear look at cultural politics at the grassroots level. Here we see Motown's music not as the mere soundtrack for its historical moment but as an active agent in the politics of the time. In this story, Motown Records had a distinct role to play in the city's black community as that community articulated and promoted its own social, cultural, and political agendas. Smith shows how these local agendas, which reflected the unique concerns of African Americans living in the urban North, both responded to and reconfigured the national civil rights campaign. Against a background of events on the national scene--featuring Martin Luther King, Jr., Langston Hughes, Nat King Cole, and Malcolm X--*Dancing in the Street* presents a vivid picture of the civil rights movement in Detroit, with Motown at its heart. This is a lively and vital history. It's peopled with a host of major and minor figures in black politics, culture, and the arts, and full of the passions of a momentous era. It offers a critical new perspective on the role of popular culture in the process of political change.

The Book Report from the Black Lagoon

“Indelible and extraordinary.”—Tara Westover, author of *Educated: A Memoir*, *New York Times Book Review* The best-selling author of *How Children Succeed* returns with a powerful, mind-changing inquiry into higher education in the United States Does college still work? Is the system designed just to protect the privileged and leave everyone else behind? Or can a college education today provide real opportunity to young Americans seeking to improve their station in life? *The Years That Matter Most* tells the stories of students trying to find their way, with hope, joy, and frustration, through the application process and into college. Drawing on new research, the book reveals how the landscape of higher education has shifted

in recent decades and exposes the hidden truths of how the system works and whom it works for. And it introduces us to the people who really make higher education go: admissions directors trying to balance the class and balance the budget, College Board officials scrambling to defend the SAT in the face of mounting evidence that it favors the wealthy, researchers working to unlock the mysteries of the college-student brain, and educators trying to transform potential dropouts into successful graduates. With insight, humor, and passion, Paul Tough takes readers on a journey from Ivy League seminar rooms to community college welding shops, from giant public flagship universities to tiny experimental storefront colleges. Whether you are facing your own decision about college or simply care about the American promise of social mobility, *The Years That Matter Most* will change the way you think—not just about higher education, but about the nation itself.

Differentiated instruction is a nice idea, but what happens when it comes to assessing and grading students? What's both fair and leads to real student learning? Fair Isn't Always Equal answers that question and much more. Rick Wormeli offers the latest research and common sense thinking that teachers and administrators seek when it comes to assessment and grading in differentiated classes. Filled with real examples and "gray" areas that middle and high school

educators will easily recognize, Rick tackles important and sometimes controversial assessment and grading issues constructively. The book covers high-level concepts, ranging from “rationale for differentiating assessment and grading” to “understanding mastery” as well as the nitty-gritty details of grading and assessment, such as: whether to incorporate effort, attendance, and behavior into academic grades; whether to grade homework; setting up grade books and report cards to reflect differentiated practices; principles of successful assessment; how to create useful and fair test questions, including how to grade such prompts efficiently; whether to allow students to re-do assessments for full credit. This thorough and practical guide also includes a special section for teacher leaders that explores ways to support colleagues as they move toward successful assessment and grading practices for differentiated classrooms.

Owls

A great folk hero in American history, Edison is viewed by the public as a facile inventor, the electrical wizard and the perfect symbol of the self-made and practical creator. But he was also a paradoxical figure: deaf, impoverished and with no formal education as a youngster, Edison nevertheless became a fertile and versatile inventor, accumulated fortunes for himself and others but remained indifferent to wealth except as a means towards more inventions. Edison’s key contributions include the carbon microphone, the electric light bulb, electricity

distribution systems, the phonograph and the motion-picture camera. Edison's methods were also remarkable: halfway between the craftsman-tinkerer of the early 19th century and the scientist of today, he established and ran pioneering research laboratories with large staffs, yet lacked training in mathematics or the basic sciences. Matthew Josephson's *Edison: A Biography* won the Society of American Historians' Francis Parkman Prize in 1960. "This is an outstanding biography [Josephson] establishes the developing relationship between finance and invention which constitutes the basis for Edison's success [He] has mastered the substance of Edison's inventive activity and has written of it quite authoritatively and vividly." — Thomas P. Hughes, *Technology and Culture* "It is clear that there is reason to welcome yet another book about a man of whom so much has been written. It must have been precisely because so much in the Edison record is myth, fostered by adulators and by Edison himself that Mr. Josephson turned his skillful, corrective hand to a saga that may have seemed more familiar than it actually is. From his well-presented, well-written findings emerges a giant without whom much of life as we live it would simply not exist. It is a first-rate job that needed doing." — John K. Hutchens, *New York Herald Tribune* "A well-researched account of the life of one of America's authentic folk heroes--Thomas Alva Edison--an original creator with a genius for strategic invention Thoroughly absorbing, this significant volume is a competent contribution to the history of American science, and gives not only a sharply drawn picture of this self-educated giant of invention, but also of the beginnings of the telegraph, electrical, record, motion picture and automobile

industries, as well as the sociological changes that were wrought by Edison's practical discoveries." — Kirkus Review "A biography that is dignified, detailed, and objective, sprinkled with moments of humor, pathos, and drama One of the chief virtues of this book is the care taken by the author to build up a realistic picture of Edison the man." — F. Garvin Davenport, *The American Historical Review*

Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning. In *Ditch That Textbook*, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. *Ditch That Textbook* is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

High Five! combines the spellbinding charm of a timeless parable with cutting-edge information about why teams are important and what individuals and organizations can do to build successful ones. Through the story of Alan Foster, a workplace one-man band, High Five! identifies the four key ingredients of winning teams. Although Alan is an effective producer, he is unwilling to share the spotlight by partnering on projects and is fired because, as his boss puts it, "Alan, we need good producers who are good team players, too." It is a bitter pill for him to swallow. While mulling over his disappointment, he takes his son to his grade-five hockey practice, where it is clear that his son's team, the Riverbend Warriors, knows nothing about teamwork, either. When the team's two overworked coaches learn of Alan's plight, they persuade him to join their ranks, and he finds himself charged with teaching himself and the players the meaning of teamwork. With the

help of a woman friend-a former girls' basketball coach who has "won more high school basketball championships than anyone"-Alan and the Warriors learn the magic of teamwork and that "none of us is as smart as all of us." With its simple style and easy-to-follow techniques, High Five! is a must-read for anyone seeking to learn the value and power of teamwork.

High Five!

The Internet Revolution, like all great industrial changes, has made the world's elephantine media companies tremble that their competitors-whether small and nimble mice or fellow elephants-will get to new terrain first and seize its commanding heights. In a climate in which fear and insecurity are considered healthy emotions, corporate violence becomes commonplace. In the blink of an eye-or the time it has taken slogans such as "The Internet changes everything" to go from hyperbole to banality-"creative destruction" has wracked the global economy on an epic scale. No one has been more powerful or felt more fear or reacted more violently than Bill Gates and Microsoft. Afraid that any number of competitors might outflank them-whether Netscape or Sony or AOL Time Warner or Sun or AT&T or Linux-based companies that champion the open-source movement or some college student hacking in his dorm room-Microsoft has waged holy war on all foes, leveraging its imposing strengths. In World War 3.0, Ken Auletta chronicles this fierce conflict from the vantage of its most important theater of operations: the

devastating second front opened up against Bill Gates's empire by the United States government. The book's narrative spine is *United States v. Microsoft*, the government's massive civil suit against Microsoft for allegedly stifling competition and innovation on a broad scale. With his superb writerly gifts and extraordinary access to all the principal parties, Ken Auletta crafts this landmark confrontation into a tight, character- and incident-filled courtroom drama featuring the best legal minds of our time, including David Boies and Judge Richard Posner. And with the wisdom gleaned from covering the converging media, software, and communications industries for *The New Yorker* for the better part of a decade, Auletta uses this pivotal battle to shape a magisterial reckoning with the larger war and the agendas, personalities, and prospects of its many combatants.

501 Writing Prompts

This revised and retitled edition of Searching Writing includes two additional I-Search papers, one by a teacher, and a new chapter entitled "The Larger Context," which shows how the I-Search concept can work throughout the whole curriculum in school and college. As with the first edition, The I-Search Paper is more than just a textbook; it's a new form of instructional help -- a context book -- that shows students what authority is in matters of learning and invites them to join the author and teacher in the educational movement called "Writing to Learn." To put this book in the hands of all the students in the course is not only to help them carry out an I-Search but to introduce them in a delightful way to the resources and tools of intellectual inquiry -- but one that never forgets the emotional or

physical side of human activity. This is a rare textbook that treats students as partners in learning. It shows what it is to take charge of one's own learning and suggests that this move is one that productive people keep making throughout their lives.

The Years That Matter Most

Curious Researcher

First published in 1981, this book reassesses the case of Sacco and Vanzetti, two Italian immigrant anarchists living in Boston in 1920. The pair were accused of a payroll robbery and the murder of two guards for which they were arrested and, after a long trial based on inadequate and prejudiced evidence, executed in 1927. In 1977, on the fiftieth anniversary of their deaths, the Commonwealth of Massachusetts issued a proclamation which acknowledged a miscarriage of justice. *The Black Flag* provides an account of the controversial trial and a re-evaluation of the celebrated case of the Commonwealth's decision. Brian Jackson puts the trial in the social context of the period and exposes the nature of anarchism by looking at the lives of two of its exponents, resulting in a moving exploration of a series of events that continue to trouble the conscience of America.

In *The Science of Running*, elite coach and exercise physiologist Steve Magness integrates the latest research with the training processes of the world's best runners, to deliver an in depth look at how to maximize your performance. It is a unique book that conquers both the scientific and practical points of running in two different sections. The first is aimed at identifying what limits running performance from a scientific standpoint. You will take a tour through the inside of the body, learning what causes fatigue, how we

produce energy to run, and how the brain functions to hold you back from super-human performance. In section two, we turn to the practical application of this information and focus on the process of training to achieve your goals. You will learn how to develop training plans and to look at training in a completely different way. The Science of Running does not hold back information and is sure to challenge you to become a better athlete, coach, or exercise scientist in covering such topics as: . What is fatigue? The latest research on looking at fatigue from a brain centered view. . Why VO2max is the most overrated and misunderstood concept in both the lab and on the track . Why zone training leads to suboptimal performance. . How to properly individualize training for your own unique physiology. . How to look at the training process in a unique way in terms of stimulus and adaptation. . Full sample training programs from 800m to the marathon.
