While most books on statistics seem to be written as though targeting other statistics professors, John Reinard's Communication Research Statistics is especially impressive because it is clearly intended for the student reader, filled with unusually clear explanations and with illustrations on the use of SPSS. I enjoyed reading this lucid, student-friendly book and expect students will benefit enormously from its content and presentation. Well done!" --John C. Pollock, The College of New Jersey Written in an accessible style using straightforward and direct language, Communication Research Statistics guides students through the statistics actually used in most empirical research undertaken in communication studies. This introductory textbook is the only work in communication that includes details on statistical analysis of data with a full set of data analysis instructions based on SPSS 12 and Excel XP.

## **Research in Education**

A comprehensive survey research book that incorporates survey design, implementation, data management, and data analysis, this text is based in sociological research and contains extensive examples throughout. This book examines the uniqueness of each research topic and the fact that when doing such research, there is a need to make decisions about the many unique situations while trying to answer the research question. Each chapter is framed by addressing the decisions that need to be made depending on the various challenges that may arise as the survey study is developed.

The ethical dimensions of health communicators' interventions and campaigns are brought into question in this thought-provoking book. Examining the efforts to effect behavior change, the author questions how far health communication can and should go in changing people's values. The author broadens the current analysis of interventions and presents conceptual frameworks that help identify values and justifications that are embedded in health communication goals, strategies, and evaluation criteria. This critical approach helps explain how and why choices are made in design and implementation, and provides constructs and frameworks to examine them. It also widens the criteria for program evaluation and policymaking, and provides practitioners, planners, policy-makers, researchers, and students with practice-oriented questions.

How do technology and organization interact to shape organizational structures and processes? What organizational, political and social processes constrain technological development? What forces shape the articulation of organizational and technological systems? Answering these and other pivotal questions, this volume centres on the role of theory for advancing our knowledge of communication technology in organizations at several levels - micro, group and macro. The distinguished contributors examine richly diverse topics, including telecommunications, communication networks and new media, the use of group decision support systems and discretionary databases.
