In Section 1 of Essentials of Strength Training and Conditioning, Second Edition, experts in exercise physiology, biochemistry, anatomy, biomechanics, endocrinology, sports nutrition, and sport psychology discuss the principles of their respective areas of expertise and how they apply in designing safe, effective strength and conditioning programs. Section 2 discusses the selection, administration, scoring, and the interpretation of testing results. Section 3 provides information regarding the correction and execution of stretching, warm-up, and resistance training exercises. Section 4 applies information from the first three sections to the design of effective strength training and conditioning programs, both aerobic and anaerobic. The three parts of Section 4 address anaerobic exercise prescription, aerobic endurance exercise prescription, and periodization and rehabilitation. The anaerobic prescription section provides guidelines for resistance and plyometric training as well as for speed, agility, and speed endurance programs. Step-by-step guidelines are given for designing strength and conditioning programs, and application boxes illustrate how each variable applies to athletes with different training goals. A unique feature of this edition is the use of scenarios to illustrate how the guidelines presented for each of the program design variables are applied to attain the different training scores.
