A History of Ancient Geography

International Relations

For anyone who has ever dreamed of hearing a horse's story . . . Independence, Missouri, 1846 Koda is a bay quarter horse with a white blaze. He loves to explore the countryside and run free with his human friend Jasmine nearby. But after Koda sets out with Jasmine's family on a long and dusty wagon train journey on the Oregon Trail, he finds out what is truly important to him. Here is Koda's story . . . in his own words. With moving and knowledgeable text and lovely black-and-white art throughout—both by real horse people—this is the perfect fit for all lovers of horses and history! From the Trade Paperback edition.

Killing Kelly

Igbo

A former soldier, trained in the French Foreign Legion and committed to helping blacks achieve the skills of military leadership describes his own terrifying experience during the Biafran conflict

Student Failure in National Examination

Language in Society

Easing the transition from GCSE to AS level, this textbook meets the 2004 Edexcel specifications and provides numerous worked examples and solutions to aid understanding of key concepts.

Introductory Geomorphology

A Classical Dictionary

First published in 1967, this volume posits that the science of international relations is concerned with observation, analysis and theorizing on the relations between states. An analysis of a particular problem such as the disarmament or the Cuban dispute forms a proper part of the study, but Dr Burton insists that such an analysis should be made within the framework of a general theory concerning the patterns of interaction between states. The author examines the nature of international relations as a discipline, and points to the inadequacies of much orthodox theory and practice, with particular reference to orthodox power theories. He draws attention to certain features in the altering world environment which accentuate these inadequacies. Dr Burton's concern is the establishment of non-power models and concepts required to describe international relations in the nuclear age.

New School Chemistry

A New Geography of Nigeria

In this book, the research study on student failure in national examination (causes and adopted solution in Nigeria-West Africa) is propounded. This technique is applied to solve and address; the causes of massive failure recorded in GCE, WASSCE, NECO, NABTEB, JAMB and other examination body in Nigeria from 2005 to 2011. The statistical data's analyzed are samples Collected from different examination rating at different location on the factors that contribute to student's poor performance in National examination in Nigeria. Also samples are collected from individual online, analyst rating, standard board rating and Local rating. The experimental procedure were analyzed and validated on Pentium IV, 2.5GB RAM, 40GB Hard disk and Microsoft Excel package, MATLAB software program and Microsoft window 10 operating system.

Basic Electricity 2

History of Education in Nigeria

Why have 1500 separate languages developed in the Pacific region? Why do Danes understand Norwegians better than Norwegians understand Danish? Is Ebonics a language or a dialect? Linguistics tends to ignore the relationship between languages and the societies in which they are spoken, while sociology generally overlooks the role of language in the constitution of society. In this book Suzanne Romaine provides a clear, lively, and accessible introduction to the field of sociolinguistics and emphasizes the constant interaction between society and language, discussing both traditional and recent issues including: language and social class, language and gender, language and education, and pidgins and creoles. The text shows how our linguistic choices are motivated by social factors, and how certain ways of speaking come to be vested with symbolic value and includes examples drawing on studies of cultures and languages all over the world. This new edition incorporates new material on current issues in the study of gender as well as other topics such as the linguistic dimension to the ethnic conflict in the Balkans, and the controversy over Ebonics in the United States.

Horse Diaries #3: Koda

General Geography in Diagrams for West Africa

Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social, and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for: pre-service and practising chemistry teachers and lecturers; chemistry teacher educators; chemical education researchers; the designers and managers of formal chemical

curricula; informal chemical educators; authors of textbooks and curriculum support materials; practising chemists and chemical technologists. It addresses: the relation between chemistry and chemical education; curricula for chemical education; teaching and learning about chemical compounds and chemical change; the development of teachers; the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts (schools, universities, vocational colleges) but also in respect of informal education contexts (books, science centres and museums).

The Successors

Geomorphology studies the various physical, biological and chemical processes that act on the Earth's surface to create a variety of topographic and bathymetric features. The study of the origin and evolution of these features is also under the scope of this field. Such studies are aided by physical experiments, field observations and numerical modeling. It is an integrated study of the disciplines of geodesy, geology, engineering geology, geotechnical engineering, physical geography and archaeology. The primary factors responsible for the creation of topographic features of the earth are the wind, surface water flow, chemical dissolution, tectonism, volcanism and glacial action. Some other processes affecting them include periglacial processes, marine currents, extraterrestrial impact, salt-mediated action and seepage of fluids through the seafloor. This textbook provides comprehensive insights into the field of geomorphology. It presents this complex subject in the most comprehensible and easy to understand language. For all those who are interested in geomorphology, this book can prove to be an essential guide.

The Milk Makers

The Last Adventurer

Clu

Explains how cows produce milk and how it is processed before being delivered to stores.

Chemical Education: Towards Research-based Practice

Audio-visual Methods in Teaching

The Fate of Vultures & Other Poems

With this book, the authors support content-area and language arts teachers alike by pairing more than 75 short, kid-tested reproducible nonfiction texts with 33 simple, ready-to-go lessons that deepen comprehension and support effective

collaboration.--[book cover]

The Essence of Good Teaching

Texts and Lessons for Content-area Reading

This 1897 textbook traces the progress of geographical writing from Homeric times to the end of Rome's western empire.

The Itinerary of Greece

Yorùbá Theology & Tradition

Originally published in 1974, a comprehensive history of Nigerian Education, from early times right through to the time of publication, had long been needed by all concerned with Education in Nigeria, students, teachers and educational administrators. No one was better qualified than Professor Fafunwa to provide such a book, and in doing so he gave due emphasis to the beginnings of Education in its three main stages of indigenous, Muslim and Christian Education. Nigerian Education had been considered all too often as a comparatively recent phenomenon, but this book points out from the start that 'Education is as old as Man himself in Africa' and that both Islam and Christianity were comparative newcomers in the field. A historical treatment of these three strands which have combined to make up the modern Educational system was vital to a clear understanding of what was needed for the future, and most of the first half of the book is concerned with these Educational beginnings. The imposing of a foreign colonial system on this framework did not always lead to a happy fusion of the systems, and the successes and the failures are examined in detail. There was no shortage of documentary evidence in the form of reports and statistics during the decades prior to publication, but this evidence was frequently scattered and inaccessible to the student, so that the author's careful selection of key evidence and reports, often drawn from his own personal experience, will be invaluable for those wishing to trace the development of Education in Nigeria up to the early 1970s. A knowledge of the history and development of the Nigerian Education system, of the numerous and intensely varied personalities and beliefs which have combined and often conflicted to shape it, is indispensable to all students in colleges and universities studying to become teachers. It is this knowledge that Professor Fafunwa set out to provide, drawing on his wide experience as teacher writer and educationalist.

Hebden : Chemistry 11, a Workbook for Students

Describes the cultural, social, and historical elements of the Igbo people, their linkages to Africans outside of Africa, and the effect of European rule

Math Makes Sense 6

Aimed at researchers and advanced research students in semiconductor physics and its applications to devices in the departments of physics, nuclear physics, and chemistry, in universities, engineering colleges, research institutes, and industry. This volume focuses on quantum wells, quantum wires, and quantum dots in semiconductors like silicon, germanium, gallium, arsenic and II-VI materials. Special topics of interest include: fabrication and characterization, optical properties, transient phenomena, theory, raman spectroscopy, and porous silicon.

Physics of Semiconductor Nanostructures

One for the keeper shelf! Rediscover the heart-stopping thrills of this classic romantic suspense, only from New York Times bestselling author Heather Graham. It was the most dangerous role of her career...and possibly the last. Playing a malicious diva on a popular daytime soap, actress Kelly Trent has garnered more than her fair share of hate mail. She doesn't believe anyone would really confuse her with her character, but when an accident on the set hits too close for the producers' comfort, Kelly is unceremoniously put on hiatus. At her agent's suggestion, she agrees to appear in a music video, thinking the time away filming in the Florida Keys might be just the thing to put her life in perspective. But with two left feet, Kelly only hopes dance instructor Doug O'Casey can work miracles. A former Miami cop, Doug still has a lawman's instinct for trouble, and the continued threats made against Kelly tell him that she is in danger. Now, as a deranged fan closes in, Doug realizes that someone close to Kelly wants more than her character killed off the show—someone wants her stone-cold dead. Originally published in 2005
