In this examination of the Babylonian cuneiform "algebra" texts, based on a detailed investigation of the terminology and discursive organization of the texts, Jens Høyrup proposes that the traditional interpretation must be rejected. The texts turn out to speak not of pure numbers, but of the dimensions and areas of rectangles and other measurable geometrical magnitudes, often serving as representatives of other magnitudes (prices, workdays, etc), much as pure numbers represent concrete magnitudes in modern applied algebra. Moreover, the geometrical procedures are seen to be reasoned to the same extent as the solutions of modern equation algebra,

Regular polytopes and their symmetry have a long history stretching back two and a half millennia, to the classical regular polygons and polyhedra. Much of modern research focuses on abstract regular polytopes, but significant recent developments have been made on the geometric side, including the

exploration of new topics such as realizations and rigidity, which offer a different way of understanding the geometric and combinatorial symmetry of polytopes. This is the first comprehensive account of the modern geometric theory, and includes a wide range of applications, along with new techniques. While the author explores the subject in depth, his elementary approach to traditional areas such as finite reflexion groups makes this book suitable for beginning graduate students as well as more experienced researchers.

Selected Proceedings of the 7th IAWQ Asia-Pacific Regional Conference (Asian Waterqual '99), held in Taipei, Chinese Taiwan, 18-20 October 1999. The seventh conference in the Asian Waterqual series proved highly successful, with nearly four hundred delegates from 17 countries gathering to review the state of research and practice in water quality management in the region. As its growing economies create pollution and deplete natural resources, Asia is making concerted efforts to meet international environmental standards and is investing in environmental research and development. Eight major themes set the scope of the conference: domestic sewage treatment and reuse; innovative water and wastewater treatment technology; livestock farming wastewater treatment and reuse; management of water resources and water quality; sludge treatment, disposal, and reuse; industrial wastewater treatment and reuse; and integrated watershed management. It so happens that at least one paper from each theme has been selected for publication. While focusing on Asian concerns, these proceedings contain much that will prove highly valuable and influential throughout the rest of the world. After review 66 papers have been selected, with the following topics being the subjects of a majority of the selected papers: The activated sludge process UASB Nitrogen and phosphorus removal in different biological treatment processes Physicochemical treatment of toxic pollutants Sludge
