How to Set Up Photography Lighting for a Home Studio

Amateur astronomy has changed beyond recognition in less than two decades. The reason is, of course, technology. Affordable high-quality telescopes, computer-controlled 'go to' mountings, autoguiders, CCD cameras, video, and (as always) computers and the Internet, are just a few of the advances that have revolutionized astronomy for the twenty-first century. Martin Mobberley first looks at the basics before going into an in-depth study of what's available

Read Book Nikon Coolpix L25 Digital Camera Manual

commercially. He then moves on to the revolutionary possibilities that are open to amateurs, from imaging, through spectroscopy and photometry, to patrolling for near-earth objects - the search for comets and asteroids that may come close to, or even hit, the earth. The New Amateur Astronomer is a road map of the new astronomy, equally suitable for newcomers who want an introduction, or old hands who need to keep abreast of innovations. From the reviews: "This is one of several dozen books in Patrick Moore's "Practical Astronomy" series. Amid this large family, Mobberley finds his niche: the beginning high-tech amateur. The book's first half discusses equipment: computer-driven telescopes, CCD cameras, imaging processing software, etc. This market is changing every bit as rapidly as the computer world, so these details will be current for only a year or two. The rest of the book offers an overview of scientific projects that serious amateurs are carrying out these days. Throughout, basic formulas and technical terms are provided as needed, without formal derivations. An appendix with useful references and Web sites is also included. Readers will need more than this book if they are considering a plunge into high-tech amateur astronomy, but it certainly will whet their appetites. Mobberley's most valuable advice will save the book's owner many times its cover price: buy a quality telescope from a reputable dealer and install it in a simple shelter so it can be used with as little set-up time as possible. A poor purchase choice and the hassle of setting up are why most fancy telescopes gather dust in their owners' dens. Summing Up: Highly recommended. General readers; lower- and upper-division undergraduates."(T. D. Oswalt,

Sergio Ruzzier brings his mischievous touch to a timeless favorite by Florence Parry Heide, beloved author of *The Shrinking of Treehorn*. This delightful new edition includes one never-before-published story. Ruby is reliable (kinda). Arthur is careful (sorta). Harry eats his carrots (though it depends on what you mean by “eat”). And just like all perfect children, Gloria helps her mother (well, that might be an exaggeration). As the eight deliciously wicked tales featured in this hilarious chapter book prove, it’s perfectly nice to be a perfect child—but where’s the fun in that?

From the creators of *Homeland* and *American Horror Story* comes *Fugitive X*, the chilling sequel to *Revolution 19*. After the robot revolution, anyone who escaped capture by the bots made their homes in secret freeposts in the wilderness outside the bot-controlled Cities. Siblings Nick, Kevin, and Cass never would have dreamed of venturing into the Cities, but when their parents are kidnapped, they have no choice but to follow them. Not everything goes as planned, though, and the siblings find themselves fleeing the city without their parents. And then the three are separated, and for the first time, they are on their own. Cass is brought in for reprogramming by the bots; Nick joins up with rebel soldiers; and Kevin meets the man who is responsible for the robot technology—and their only chance at defeating the robots once and for all. As the three fight to take down the bots, they must prepare for a looming war

About the Book : - One of the great icons of our time, Khushwant Singh, 95, is a man of contradictions. An agnostic who's well-versed in the holy scriptures; a vocal champion of free speech who supported the Emergency; a dirty old man who sees the world in a grain of sand and beauty in a wild flower. Born in 1915 in pre-Partition Punjab, Khushwant Singh has been witness to almost all the major events in modern Indian history and has known most of the figures who have shaped it. In a career spanning over six decades as writer, editor and journalist, his views have been provocative and controversial, but they have also been profound, deeply perceptive and always compelling. Khushwant Singh has never been less than honest. In *Absolute Khushwant*, India's grand old man of letters tells us about his life, his loves and his work. He writes on happiness, faith and honesty. And, for the first time, about his successes and failures, his strengths and weaknesses, his highs and lows. He tells us what makes him tick and the secret of his longevity; he confesses his deepest fears and what he holds dear. He writes about sex, marriage, worship and death; the people he's admired and detested.

Cells can be funny. Try to grow them with a slightly wrong recipe, and they turn over and die. But hit them with an electric field strong enough to knock over a horse, and they do enough things to justify international meetings, to fill a sizable book, and to lead one to speak of an entirely new technology for cell manipulation. The very improbability of these events not only raises questions about why things happen but also leads to a long list of practical systems in which the application of strong electric fields might enable the merger of cell contents or the introduction of alien but vital material. Inevitably, the basic questions and the practical applications will not keep in step. The questions are intrinsically tough. It is hard enough to analyze the action of the relatively weak fields that rotate or align cells, but it is nearly impossible to predict responses to the cell-shredding bursts of electricity that cause them to fuse or to open up to very large molecular assemblies. Even so, theoretical studies and systematic examination of model systems have produced some creditable results, ideas which should ultimately provide hints of what to try next.

The book manages to combine humor, adventure, tragedy, triumph, heroism, and even some forays into the risqué... while chronicling the careers of 20 enduring personalities that helped make diving what it is today. Some of those interviewed are retired now, one (author Peter Benchley of Jaws fame) recently passed away, and many are still making history through their ongoing work. It's quite a group. Consider that the lineup includes actress and Sea Hunt star Zale Parry who also set the depth record for women divers back in 1954. Stan Waterman provides both the book's Foreword and a revealing insider look at his seven decades in diving. Living legend Bev Morgan pioneered the first dive training programs along with revolutionizing commercial diving equipment. His image in full hardhat dress also graces the book's cover. Morgan's candor and humor set the pace for the lively montage of dialogues to follow with Australian couple Ron and Valerie Taylor who rose to fame in the iconic shark documentary film Blue Water, White Death. They are joined by others from diving's first generation including filmmaker Al Giddings (The Deep, Abyss, Titanic, etc.), retail

pioneer and cameraman Chuck Nicklin (The Diving Locker), manufacturers Dick Bonin (Scubapro) and Bob Hollis (Oceanic), photography masters Ernie Brooks and Paul Humann, as well as deep ocean explorer Dr. Bob Ballard who discovered the wrecks of the Titanic, Bismarck, and PT-109. Diving's second generation of innovators includes cave explorer Wes Skiles, filmmaker Mike deGruy, wreck explorer John Chatterton (of Shadow Divers fame), IMAX film producer Greg MacGillivray, and the dynamic husband/wife team of Howard and Michele Hall who seem to dominate the realm of documentary underwater films now (Island of the Sharks, Coral Reef Adventure, Deep Sea 3D). Last but not least, Stan Waterman talked Gilliam into sitting for an interview about his own amazing career and, typically, he shares a wicked sense of humor along with some biting perspective about what it was like to champion new technologies and daring approaches to diving business when the sport's ultra-conservatives wanted to suppress nitrox, liveboards, technical diving, diving computers, training methods, and honest journalism. Each chapter is a slice of human interest that lets the reader briefly pull back the curtain on the personal lives of diving's heroes and feel like they are part of the conversation. The full color book is lavishly illustrated with great photographs that capture each interviewee throughout their diving careers. It's a very personal journey and the reader will feel like they pulled up a chair and shared a cup of coffee around a table with each person. Gilliam enlisted help from other leading writers for some interviews he couldn't conduct himself and Fred Garth, Lina Hitchcock, Eric Hanauer, Douglas Seifert and Michel

on to keep them at the forefront of transistor circuit design. This seminal work has now been presented in a clear new format and completely updated to include the latest equipment such as laser diodes, Trapatt diodes, optocouplers and GaAs transistors, and the most recent line output stages and switch-mode power supplies. Although integrated circuits have widespread application, the role of discrete transistors is undiminished, both as important building blocks which students must understand and as practical solutions to design problems, especially where appreciable power output or high voltage is required. New circuit techniques covered for the first time in this edition include current-dumping amplifiers, bridge output stages, dielectric resonator oscillators, crowbar protection circuits, thyristor field timebases, low-noise blocks and SHF amplifiers in satellite receivers, video clamps, picture enhancement circuits, motor drive circuits in video recorders and camcorders, and UHF modulators. The plan of the book remains the same: semiconductor physics is introduced, followed by details of the design of transistors, amplifiers, receivers, oscillators and generators. Appendices provide information on transistor manufacture and parameters, and a new appendix on transistor letter symbols has been included.

Many mammals like to dig in the dirt, but few call it home. Those that do, such as mole-rats, zokors, and tuco-tucos, have developed novel adaptations to their subterranean life, including bones and muscles modified for efficient digging and ways to "see" underground without using their eyes. These unusual traits, adopted independently by unrelated groups around the world, also make subterranean rodents fascinating subjects for biologists. *Life Underground* provides the first comprehensive review of the biology of subterranean rodents. Arranged by topic rather than by taxon to facilitate cross-species comparisons, chapters cover such subjects as morphology, physiology, social behavior, genetic variation, and evolutionary diversification. Two main questions run throughout the book. First, to what extent has subterranean life shaped the biology of these animals, leading to similar adaptations among otherwise dissimilar species? Second, how have the distinct evolutionary histories of these groups led to different solutions to the challenges posed by life underground?

Peptide Receptors Part I was published in 2000 (as volume 16 of the Handbook of Chemical Neuroanatomy series). This volume summarized current knowledge on the discrete anatomical distribution of ten families of neuropeptide receptors expressed in the mammalian CNS. Part II is its natural complement with chapters covering six additional families of neuropeptide receptors for ligands ranging from well known peptides such as the opioids and neurotensin to recently isolated ones like the orexins. As in the case of Part I, this volume integrates photomontages and maps of quantitative receptor autoradiography, in situ hybridization histochemistry and immunocytochemistry. P Data derived from transgenic and knock-out animals are also summarized, helping to decipher the possible
