### Woolf and the Art of Exploration

### Clinical Text Mining

Anyone who reads the Gospels carefully will notice that there are differences in the manner in which they report the same events. These differences have led many conservative Christians to resort to harmonization efforts that are often quite strained, sometimes to the point of absurdity. Many people have concluded the Gospels are hopelessly contradictory and therefore historically unreliable as accounts of Jesus. The majority of New Testament scholars now hold that most if not all of the Gospels belong to the genre of Greco-Roman biography and that this genre permitted some flexibility in the way in which historical events were narrated. However, few scholars have undertaken a robust discussion of how this plays out in Gospel pericopes (self-contained passages). *Why Are There Differences in the Gospels?* provides a fresh approach to the question by examining the works of Plutarch, a Greek essayist who lived in the first and second centuries CE. Michael R. Licona discovers three-dozen pericopes narrated two or more times in Plutarch's *Lives*, identifies differences between the accounts, and analyzes these differences in light of compositional devices identified by classical scholars as commonly employed by ancient authors. The book then applies the same approach to nineteen pericopes that are narrated in two or more Gospels, demonstrating that the major differences found there likely result from the same compositional devices employed by Plutarch. Showing both the strained harmonizations and the hasty dismissals of the Gospels as reliable accounts to be misguided, Licona invites readers to approach them in light of their biographical genre and in that way to gain a clearer understanding of why they differ.

### Drama and Sermon in Late Medieval England

Draws on interviews with General Tommy Franks, Condoleezza Rice, and other officials and military personnel to provide a behind-the-scenes look at the decision-making process that determined the nature of American involvement in Iraq.

## **A Musicology of Performance**

### **Cat Among the Pigeons**

The recent release of Pope Francis's much-discussed encyclical on the environment, *Laudato Si': On Care for Our Common Home*, has reinforced environmental issues as also moral and spiritual issues. This anthology, twenty years ahead of the encyclical but very much in line with its agenda, offers essays by fifteen philosophers, theologians, and environmentalists who argue for a response to ecology that recognizes the tools of science but includes a more spiritual approach - one with a more humanistic, holistic view based on inherent reverence toward the natural world. Writers whose orientations range from Buddhism to evangelical Christianity to Catholicism to Native American beliefs explore ways to achieve this paradigm shift and suggest that "the environment is not only a spiritual issue, but the spiritual issue of our time."

### **The Greening of Faith**

This full-length study investigates how sermons and vernacular religious drama worked as media for public learning, how they combined this didactic aim with literary exigencies, and how plays acquired and reflected authority. The interrelation between sermons and vernacular drama, formerly assumed to be a close one, is addressed from historical connections, performative aspects, and the portrayal of penance. The work demonstrates the subtly different purposes and contents and outlines the unique ways in which they operate within late medieval England.

### **Pitman's Journal of Commercial Education**

While a number of books have looked at the intersection between human health in general and other topics, such as climate change or diet, this book focuses specifically on cancer as it impacts and is impacted by social justice issues. The massive explosion of research knowledge of cancer immunology and genomics is holding out great promise of therapeutic advances, yet other human actions—climate change, pollution, business decisions, advertising - are fostering health inequalities as well as increasing risks. Those involved in cancer care and research are in a unique position to let their experiences and knowledge inform the public, yet very often have not taken strong public roles when it comes to discussing issues surrounding tobacco, climate change and health risks, financial toxicity of treatments, and diet choices. Written by a multidisciplinary team of authors and for medical oncologists, cancer researchers, occupational health workers, and related medical students, residents, and fellows, this book encourages oncologists to address public health care and the societal issues associated with cancer risk. This volume discusses the overarching theme of

environmental justice and oncology, focuses on business and cancer (such as clinical trials, drug development and profits, and global disparities), as well as animals and cancer.

## **Cancer and Society**

“This majestic, moving novel is an instant classic, a book that will be read, discussed and taught beyond the rest of our lives.”—Chicago Tribune Winner of the National Book Critics Circle Award, *A Lesson Before Dying* is a deep and compassionate novel about a young man who returns to 1940s Cajun country to visit a black youth on death row for a crime he didn't commit. Together they come to understand the heroism of resisting. From the critically acclaimed author of *A Gathering of Old Men* and *The Autobiography of Miss Jane Pittman*.

## **Disease Control Priorities, Third Edition (Volume 2)**

Why use qualitative methods? What kinds of questions can qualitative methods help you answer? How do you actually do rigorous and reflective qualitative research in the real world? Written by a team of leading researchers associated with NatCen Social Research (the National Centre for Social Research) this textbook leads students and researchers through the entire process of qualitative research from beginning to end - moving through design, sampling, data collection, analysis and reporting. In this fully revised second edition you will find: A practical account of how to carry out qualitative research which recognises a range of current approaches and applications A brand new chapter on ethics A brand new chapter on observational research Updated advice on using software when analysing your qualitative data New case studies which illustrate issues you may encounter and how problems have been tackled by other researchers. This book is an ideal guide for students, practitioners and researchers faced with the challenges of doing qualitative research in both applied and academic settings in messy real-life contexts.

## **Encyclopedia of Toxicology**

The global epidemic of hepatitis B and C is a serious public health problem. Hepatitis B and C are the major causes of chronic liver disease and liver cancer in the world. In the next 10 years, 150,000 people in the United States will die from liver disease or liver cancer associated with chronic hepatitis B virus (HBV) or hepatitis C virus (HCV) infections. Today, between 800,000 and 1.4 million people in the United States have chronic hepatitis B and between 2.7 and 3.9 million have chronic hepatitis C. People most at risk for hepatitis B and C often are the least likely to have access to medical services. Reducing the rates of illness and death associated with these diseases will require greater awareness and knowledge among health care workers, improved identification of at-risk people, and improved access to medical care. Hepatitis B is a vaccine-preventable disease. Although federal public health officials recommend that all newborns, children, and at-risk adults receive the vaccine, about 46,000 new acute cases of the HBV infection emerge each year, including 1,000 in infants who acquire the infection during birth from their HBV-positive mothers. Unfortunately, there is no vaccine for hepatitis C, which is transmitted by direct exposure to infectious blood. Hepatitis and Liver Cancer identifies missed opportunities related to the prevention and control of HBV and HCV infections. The book presents ways to reduce the numbers of new HBV and HCV infections and the morbidity and mortality related to chronic viral hepatitis. It identifies priorities for research, policy, and action geared toward federal, state, and local public health officials, stakeholder, and advocacy groups and professional organizations.

Many people grimace at the sound of music theory. It can conjure up bad memories of grade school music classes, rattle the brains of college students, and make self-taught musicians feel self-defeated. Music Theory may seem tedious and unnecessary, especially since not many people can read music. Luckily, Music Theory for Dummies shows you the fun and easy way to understanding the concepts needed to compose, deconstruct, and comprehend music. This helpful guide will give you a great grasp of: Note value and counting notes Treble and bass clefs Time signatures and measures Naturalizing the rhythm Tempo and dynamic Tone, color, and harmonics Half steps and whole steps Harmonic and melodic intervals Key signatures and circles of fifths Scales, chords, and their progressions Elements of form Music theory's fascinating history This friendly guide not only explores these concepts, it provides examples of music to compliment them so you

can hear how they sound firsthand. With a bonus CD that demonstrates these ideas with musical excerpts on guitar and piano, this hands-on resource will prove to you that music theory is as enjoyable as it is useful. Don't get discouraged by the seemingly complicated written structure. With Music Theory for Dummies, understanding music has never been easier! Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

Cowritten by USA Today best-selling author Tara Sivec and award-winning narrator Andi Arndt, a hysterically funny, heartfelt romance about starting over and taking chances. Nothing good ever comes from drinking a box of wine alone. So when I decided to entertain my drunken self by setting up some hand-me-down podcasting equipment and reading the steamy parts from romance novels, I never thought anyone would actually listen. The fact that I admitted my huge crush on my sexy next door neighbor made the whole thing even more mortifying. But sometimes life surprises you, and that's how my podcast, Heidi's Discount Erotica, was born. Now I, Heidi Larsen, a sweet former kindergarten teacher in Waconia, Minnesota, lead a scandalous double life reading erotic novels to the listening world. And with each episode, I find myself embracing my new alter ego more and

more. Now I'm starting to feel more comfortable in my own skin and do things I never would have dreamed of - like kissing my neighbor. Look out, Waconia, because Heidi's on the loose! She's in your ears, in your hearts, and down your pantsuit, that didn't sound as good as it did in my head. Well, you get the picture, don'tcha know!

## **Guidelines Manual**

This book examines the nature of musical performance. In it, Dorottya Fabian explores the contributions and limitations of some of these approaches to performance, be they theoretical, cultural, historical, perceptual, or analytical. Through a detailed investigation of recent recordings of J. S. Bach's Six Sonatas and Partitas for Solo Violin, she demonstrates that music performance functions as a complex dynamical system. Only by crossing disciplinary boundaries, therefore, can we put the aural experience into words. *A Musicology of Performance* provides a model for such a method by adopting Deleuzian concepts and various empirical and interdisciplinary procedures. Fabian provides a case study in the repertoire, while presenting new insights into the state of baroque performance practice at the turn of the twenty-first century. Through its wealth of audio examples, tables, and graphs, the book offers both a sensory and a scholarly account of musical performance. These interactive elements map the connections between historically informed and mainstream performance styles, considering them in relation to broader cultural trends, violin schools, and individual artistic trajectories. *A Musicology of Performance* is a must read for academics and post-graduate students and an essential reference point for the study of music performance, the early music movement, and Bach's opus.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise

from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in

measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

The ancient Greek tragedy about the exiled king's final days—and the power struggle between his two sons. The second book in the trilogy that begins with *Oedipus Rex* and concludes with *Antigone*, *Oedipus at Colonus* is the story of an aged and blinded Oedipus anticipating his death as foretold by an earlier prophecy. Accompanied by his daughters, Antigone and Ismene, he takes up residence in the village of Colonus near Athens—where the locals fear his very presence will curse them. Nonetheless they allow him to stay, and Ismene informs him his sons are battling each other for the throne of Thebes. An oracle has pronounced that the location of their disgraced father's final resting place will determine which of them is to prevail. Unfortunately, an old enemy has his own plans for the burial, in this heart-wrenching play about two generations plagued by misfortune from the world's great ancient Greek tragedian.

This publication addresses recent developments in neutron generator (NG) technology. It presents information on compact instruments with high neutron yield to be used for neutron activation analysis (NAA) and prompt gamma neutron activation analysis in combination with high count rate spectrometers. Traditional NGs have been shown to be effective for applications including borehole logging, homeland security, nuclear medicine and the on-line analysis of aluminium, coal and cement. Pulsed fast thermal neutron analysis, as well as tagged and timed neutron analysis, are additional techniques which can be applied using NG. Furthermore, NG can effectively be used for elemental analysis and is also effective for analysis of hidden materials by neutron radiography. Useful guidelines for developing NG based research laboratories are also provided in this publication.

The year 2003 was the 50th anniversary of the seminal experiment of Stanley Miller. This was a unique opportunity for highlighting the current interest in this most interdisciplinary subject. The leading space agencies: the European Space Agency (ESA) as well as NASA, the American Space Agency, have planned missions that will elucidate some of the still unknown questions underlying research in the origin of life. New results are surpassing our ability to keep well informed: the reviews that we were presented at the Trieste meeting will bring the readers of this well-documented and timely book up to date in this fast-moving area. An important component of the conference was the review of the Cassini-Huygens mission due to arrive in the Saturn system just one year after the conference convened in Trieste. There was particular interest in the status of the experiments that will take place inside the atmosphere of Titan, the large satellite, which is a testing ground for the theories and experiments in the field of chemical evolution. The Jovian system is currently under study with the view of investigating the possibility of life underneath the frozen surface of the Galilean moon Europa; the ESA mission "Mars Express" and Mars Odyssey received special attention. Some of the world leaders in the field gathered in Trieste in September 2003 - that was a most timely date for

reviewing recent data and discussing the prospects of future research.

After hours of careful thought, the Yeshiva administration posted a hand-lettered sign outside the cafeteria door. THE YESHIVA PROVIDES FOOD FOR ONE PORTION ONLY NO STUDENT IS PERMITTED TO STAND IN LINE FOR SECOND PORTION By the time I finished lunch, I noticed that some student had altered the sign in a subtle, Talmudic manner: THE YESHIVA PROVIDES FOOD FOR ONE PORTION ONLY? NO! STUDENT IS PERMITTED TO STAND IN LINE FOR SECOND PORTION. The Sea of Talmud is a brief introduction to the Talmud, viewed from the perspective of a newcomer to the world of the Yeshiva. Intended for readers with little background to the historical development of the Talmud and its relevance for Jewish observance, The Sea of Talmud hopes to inspire readers with the beauty and glory of traditional Yeshiva study.

### **Heidi's Guide to Four Letter Words**

A longtime standard for military healthcare personnel, the second edition of Military Advanced Regional Anesthesia and Analgesia Handbook (MARAA) has been thoroughly revised and updated. Although the MARAA handbook initially gained its reputation as a useful resource for managing pain associated with battlefield trauma, its beautifully illustrated step-by-step guidance provides pertinent and practical guidance for managing vital acute pain services in all civilian and military clinical settings. Opening chapters review equipment, local anesthesia and additives, and physics of ultrasound and nerve stimulation. Much of the book is devoted to step-by-step guidance on performing various regional anesthesia nerve blocks organized by pertinent neuroanatomy, use of nerve stimulation, and use of ultrasound. The concluding group of chapters discusses organization of the acute pain service and staff, a review of multidisciplinary care, basics of pediatric regional anesthesia, first-aid acupuncture, and more.

This open access book describes the results of natural language processing and

machine learning methods applied to clinical text from electronic patient records. It is divided into twelve chapters. Chapters 1-4 discuss the history and background of the original paper-based patient records, their purpose, and how they are written and structured. These initial chapters do not require any technical or medical background knowledge. The remaining eight chapters are more technical in nature and describe various medical classifications and terminologies such as ICD diagnosis codes, SNOMED CT, MeSH, UMLS, and ATC. Chapters 5-10 cover basic tools for natural language processing and information retrieval, and how to apply them to clinical text. The difference between rule-based and machine learning-based methods, as well as between supervised and unsupervised machine learning methods, are also explained. Next, ethical concerns regarding the use of sensitive patient records for research purposes are discussed, including methods for de-identifying electronic patient records and safely storing patient records. The book's closing chapters present a number of applications in clinical text mining and summarise the lessons learned from the previous chapters. The book provides a comprehensive overview of technical issues arising in clinical text mining, and offers a valuable guide for advanced students in health informatics, computational linguistics, and information retrieval, and for researchers entering these fields.
