Clinical Supervision in Occupational Therapy

"The Kawa (Japanese for river) model uses a familiar metaphor of nature as an effective medium to translate subjective views of self, life, well-being and the meanings of occupations. The familiarity of the metaphor - to both therapists and clients alike - and the ease with which its framework can be comprehended and applied makes this model an effective and highly relevant tool for an increasingly diverse global clientele." "The Kawa Model will challenge occupational therapy students, practitioners, educators and researchers to comprehend their theory in a critical light and consider how to advance their practice and profession toward a more inclusive and meaningful direction."--BOOK JACKET.

The authors have comprehensively reviewed all of the intervention effectiveness literature for occupational therapy provided for adults. The material reviewed crosses all diagnostic categories and areas of practice for adults and older adults. Analysis of over 500 research studies and systematic reviews form the basis for this book.

Concepts of Occupational Therapy

In this book Dr. Michael Stankosky, founder of the first doctoral program in knowledge management, sets out to provide a rationale and solid research basis for establishing Knowledge Management (KM) as an academic discipline. While it is widely known that Knowledge is the driver of our knowledge economy, Knowledge Management does not yet have the legitimacy that only rigorous academic research can provide. This book lays out the argument for KM as a separate academic discipline, with its own body of knowledge (theoretical constructs), guiding principles, and professional society. In creating an academic discipline, there has to be a widely accepted theoretical construct, arrived at by undergoing scholarly scientific investigation and accompanying

rigor. This construct becomes the basis for an academic curriculum, and proven methodologies for practice. Thus, the chapters in this book bridge theory and practice, providing guiding principles to those embarking on or evaluating the merits of a KM program. As a methodology itself for undertaking the development of a body of knowledge, a KM Research Map was developed to guide scholars, researchers, and practitioners. This book presents this map, and showcases cutting-edge scholarship already performed in this nascent field by including the dissertation results of eleven KM scholar/practitioners.

Burn Care and Rehabilitation

Fieldwork education links education and practice and is a critical extension of occupational therapy curricula. Yet, despite its importance, the theory and practice of fieldwork education has remained relatively free of research, theory, development, or training for those who direct the learning of students.

The chapters in this essential book, each of which offers several learning exercises, address these gaps in the occupational therapy knowledge base, providing a theoretical, and philosophical framework, correcting myths, and forging a connection between the theory and practice of clinical education and supervision. For OT and OTA students, this book will encourage an active learning experience. For new practitioners, the book will help identify a body of knowledge not learned in school. For fieldwork educators, this book will assist with self-assessment and encourage creating a professional development plan that will further refine supervision skills. For managers of practice settings, the book will provide a theoretical base for the administrative, supportive, and educational functions of clinical supervision. Includes an 18-minute DVD produced by occupational therapy fieldwork students with 5 clinical scenarios that show situations between students and supervisors, followed by discussion questions!
