This unique A-Z guide to central heating wiring systems provides a comprehensive reference manual for hundreds of items of heating and control equipment, making it an indispensable handbook for electricians and installers across the country. The book provides comprehensive coverage of wiring and technical specifications, and now includes increased coverage of combination boilers, recently developed control features and SEDBUK (Seasonal Efficiency of Domestic Boilers in the UK) boilers ratings, where known. In addition to providing concise details of nearly 500 different boilers fuelled by electric, gas, oil and solid fuel, and over 400 programmers and time switches, this invaluable resource also features numerous easy-to-understand wiring diagrams with notes on all definitive systems. Brief component descriptions are provided, along with updated contact and website details for most major manufacturers. Ray Ward has spent over 20 years as a specialist in the field of wiring domestic central heating systems and the knowledge he has gained from hands-on experience and staff training is now brought together in this comprehensive handbook.

Henry Dreyfuss (1904-1972) was one of the pioneers of American industrial design, the man behind the modern look and function of so many household objects used by millions of Americans during the golden age of industrial design from the 1930s to the 1960s. During his 44-year career the versatile Dreyfuss designed or retooled hundreds of products that have become icons of modern design, among them the Princess and Trimline telephones, John Deere tractors, and Hoover vacuum cleaners, which Dreyfuss outfitted with headlights and bumpers in the 1930s to prevent dented and scratched furniture. Additional objects and spaces he designed range from the familiar Honeywell wall-mounted round thermostat to the Big Ben alarm clock, trains such as the classic 20th Century Limited for the New York Central Railroad, and the Situation Room for the Joint Chiefs of Staff during World War II. This first published monograph on Dreyfuss surveys his life and work

through 200 archival and new photographs of his designs and a biographical text that paints the picture of an eminently practical yet eccentric innovator. Dreyfuss streamlined even his wardrobe by wearing only brown suits, stayed exclusively at the Plaza Hotel when in New York so clients could always find him, and reportedly missed only five days of work in twenty-two years. This book is published in conjunction with a major exhibition of Dreyfuss's work at the Cooper-Hewitt, National Design Museum, Smithsonian Institution, New York.

Control Systems for Heating, Ventilating and Air Conditioning, Sixth Edition is complete and covers both hardware control systems and modern control technology. The material is presented without bias and without prejudice toward particular hardware or software. Readers with an engineering degree will be reminded of the psychrometric processes associated with heating and air conditioning as they learn of the various controls schemes used in the variety of heating and air conditioning system types they will encounter in the field. Maintenance technicians will also find the book useful because it describes various

control hardware and control strategies that were used in the past and are prevalent in most existing heating and air conditioning systems. Designers of new systems will find the fundamentals described in this book to be a useful starting point, and they will also benefit from descriptions of new digital technologies and energy management systems. This technology is found in modern building HVAC system designs.

Extraordinary architecture addresses so much more than mere practical considerations. It inspires and provokes while creating a seamless experience of the physical world for its users. It is the rare writer that can frame the discussion of a building in a way that allows the reader to see it with new eyes. *Writing About Architecture* is a handbook on writing effectively and critically about buildings and cities. Each chapter opens with a reprint of a significant essay written by a renowned architecture critic, followed by a close reading and discussion of the writer's strategies. Lange offers her own analysis using contemporary examples as well as a checklist of questions at the end of each chapter to help guide the writer. This important addition to the *Architecture Briefs* series is based on the author's design writing courses at New York University and the School of Visual Arts. Lange also writes a popular online column for *Design Observer* and has written for *Dwell*,

This book was written specifically for boiler plant operators and supervisors who want to learn how to lower plant operating costs, as well as how to operate plants of all types and sizes more wisely. This newly revised edition provides guidelines for HRSGs, combined cycle systems, and environmental effects of boiler operation. Also included is a new chapter on refrigeration systems which addresses the environmental effects of inadvertent and intentional discharges of refrigerants. Going beyond the basics of "keeping the pressure up," the author explains in clear terms how to set effective priorities to assure optimum plant operation, including safety, continuity of operation, damage prevention, managing environmental

Raytheon's history is one of the great American success stories. Launched in 1922, the Cambridge-based company quickly moved to the forefront of innovation in the electronics industry. During World War II, thousands of Raytheon workers contributed to the war effort, supplying eighty percent of the magnetron tubes (vital components for U.S. and British radars), developing miniature tubes for the crucial proximity fuse in anti-aircraft shells, and providing entire radar systems. Although government contracts slowed after World War II, Raytheon continued to develop military components, including leading-edge radars and missiles for America's defenses in the Cold War, but it also began to offer a host of civilian products: the famous RadaRange (the world's first microwave oven), televisions, marine radars, transistors, miniature hearing aids, and medical equipment.

Academically complex and challenging to apply, development and planning are increasingly relevant to the growing tourism industry. This collection contains critical studies on tourism development and planning, and calls for proactive, holistic and responsible thinking. It addresses conceptual and contemporary issues in development and planning research including political trust, innovation networks, sustainability, moral encounters, enclavisation and evolutionary economics. It argues that recognition of the contextual and historical dimensions around tourism development and planning is essential to help both researchers and practitioners better understand destination and place-based decision-making. In addition, it will lead to improvements in stakeholder relations, and explains how tourism best works with localities and localities with tourism. This book was originally published as a special issue of *Tourism Geographies*.

Although poor air quality is probably not the hazard that is foremost in peoples' minds as they board planes, it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. The Airliner Cabin Environment and the Health of Passengers and Crew examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.

In this paradigm-shattering book, leading behavioural economist and food psychologist Brian Wansink - dubbed the 'Sherlock Holmes of food' and the 'wizard of why' - offers a radical new philosophy for weight loss. The answer isn't to tell people what to do: it's to set up their living environments so that they will naturally lose weight. Using cutting-edge, never-before-seen research from his acclaimed Food and Brand Lab at Cornell University, Wansink reveals how innovative and inexpensive design changes - from home kitchens to restaurants, from grocery stores to schools and workplaces - can make it mindlessly easy for people to eat healthier and make it more profitable for the companies who sell the food. In *Slim by Design*, Wansink argues that the easiest, quickest and most natural way to reverse weight gain is to work with human nature, not against it. He demonstrates how schools can nudge kids to take an apple instead of a cookie, how restaurants can increase profits by selling half-size portions, how supermarkets can double the amount of fruits and vegetables they sell, and how anyone can cut plate refills at home by more than a third. Interweaving drawings, charts, floor plans and scorecards with new scientific studies and compelling insights that will make you view your surroundings in an entirely fresh way, this entertaining, eye-opening book offers practical solutions for changing your everyday environment to make you, your family and even your community slim by design.

Barns of New York explores and celebrates the agricultural and architectural diversity of the Empire State—from Long Island to Lake Erie, the Southern Tier to the North Country—providing a unique compendium of the vernacular architecture of rural New York. Through descriptions of the appearance and working of representative historic farm buildings, Barns of New York also serves as an authoritative reference for historic preservation efforts across the state. Cynthia G. Falk connects agricultural buildings—both extant examples and those long gone—with the products and processes they made and make possible. Great attention is paid not only to main barns but also to agricultural outbuildings such as chicken coops, smokehouses, and windmills. Falk further emphasizes the types of buildings used to support the cultivation of products specifically associated with the Empire State, including hops, apples, cheese, and maple syrup. Enhanced by more than two hundred contemporary and historic photographs and other images, this book provides historical, cultural, and economic context for understanding the rural landscape. In an appendix are lists of historic farm buildings open to the public at living history museums and historic sites. Through a greater awareness of the buildings found on farms throughout New York, readers will come away with an increased appreciation for the state's rich agricultural and architectural legacy.
