Maldives

Written for instructors, dive team captains, surface teams, and underwater personnel alike, this book offers definitive information on procedures for safe operations, proper methods of training, and how to make appropriate purchasing decisions. Various techniques and types of equipment are discussed and assessed. Included also are chapters on methods of search in black water, swift water, and contaminated water, as well as techniques for evidence recovery.

Discover Diving

This book provides practical, up-to-date information on training, team management, equipment, and techniques for ice rescue teams.

Sportdiving in Australia & the South Pacific

Occupational Diving Operations

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that

has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

The Physician's Guide to Diving Medicine

National Library of Medicine Current Catalog

Maps of the islands accompany travel tips, a brief history, and advice on sightseeing, shopping, and entertainment.

New Frontiers in Marine Tourism

This thoroughly updated edition, considered the 'bible' in this field since 1969, offers in-depth coverage of the physiological basis of safe diving and the pathogenesis of diving illnesses; the clinical diagnosis and management of diving disorders; and current equipment design and its practical clinical applications. Also covered is a current understanding of central nervous system pathology, contemporary decompression theories, and state-of-the-art treatment protocols for decompression, drowning and hypothermia.

In this intimate portrait of an island lobstering community and an eccentric band of renegade biologists, journalist Trevor Corson escorts the reader onto the slippery decks of fishing boats, through danger-filled scuba dives, and deep into the churning currents of the Gulf of Maine to learn about the secret undersea lives of lobsters. This P.S. edition features an extra 16 pages of insights into the book, including author interviews, recommended reading, and more.

'New Frontiers in Marine Tourism' is the first book of this kind to address and analyse this burgeoning tourism sector comprehensively. By integrating aspects such as the sustainability, safety, education, experiences and management of diving tourism the text highlights a variety of pressing topics related to the management of diving tourism, including: * different types of diving locations and their particular characteristics and the geographical distribution of dive locations * the growth and economic significance of diving tourism in destinations worldwide * different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. * diver satisfaction, attitudes and preferences, education and interpretation, and compliance with regulations * environmental impacts, and aspects of risk and health.

The College Student's Resume Guide

Scuba Safety in Australia

An American Immersion relives one woman's five-year journey in which she became the first woman to dive all 50 states. In this book you will find inspiration, discover hidden beauty in U.S. waters, and follow a path leading to unexpected outcomes.

Dive Training

The Most Advanced Clarinet Book

Written by two experts in diving physiology and medicine, this comprehensive resource will help you manage each stage of a dive more safely and successfully. Whether you're on the surface or bottom, in the descent or ascent, you'll know exactly what to do and when to do it. With information on everything from on-gassing and off-gassing to first response interventions for medical problems, Diving Science is as essential as a wetsuit for your next dive.

No blurb required by author.

Maui and Lanai

This book is designed to be a physician's guide for those interested in diving and hyperbaric environments. It is not a detailed document for the erudite researcher; rather, it is a source of information for the scuba-diving physician who is searching for answers put to him by his fellow nonmedical divers. Following the publication of *The Underwater Handbook: A Guide to Physiology and Performance for the Engineer* there were frequent requests for a companion volume for the physician. This book is designed to fill the void. Production of the book has been supported by the Office of Naval Research and by the Bureau of Medicine and Surgery, Research and Development Command, under Navy Contract No. N000014-78-C-0604. Our heartfelt thanks go to the many authors without whose contributions the book could not have been produced. These articles are signed by the responsible authors, and the names are also listed alphabetically in these preliminary pages. Every chapter was officially reviewed by at least one expert in the field covered and these reviewers are also listed on these pages. Our thanks go to them for their valuable assistance. We are grateful to Marthe Beckett Kent for editing Chapter III. Our thanks also go to Mrs. Carolyn Paddon for typing and retyping the manuscripts, and to Mrs. Catherine Coppola, who so expertly handled the many fiscal affairs.
