Pearson Science 6

Based on the belief that effective middle school teaching practices must be developmentally responsive, this core text provides an insightful introduction to young adolescents ages 10 to 15, and to the middle school and middle school movement. Coverage balances the practical and the theoretical to provide all of the essential knowledge today's middle school teacher needs concerning the development and characteristics of adolescents; principles, goals, and attributes of the middle school movement; and, organization, curricula, strategies, and concepts of contemporary middle schools. The authors emphasize the diversity of adolescents - in development, culture, gender, and sexual orientation - and the importance that these differences portend for educational experiences and guidance efforts.

Teaching Student-Centered Mathematics

Teaching Mathematics in Grades 6 - 12 by Randall E. Groth explores how research in mathematics education can inform teaching practice in grades 6-12. The author shows preservice mathematics teachers the value of being a “researcher—constantly experimenting with methods for developing students’ mathematical thinking—and connecting this research to practices that enhance students’ understanding of the material. Ultimately, preservice teachers will gain a deeper understanding of the types of mathematical knowledge students bring to school, and how students’ thinking may develop in response to different teaching strategies.

This book offers a meso-level description of demographics, science education, and science teacher education. Representing all 13 Canadian jurisdictions, the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes. The book highlights commonalities, consistencies, and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction-specific chapters. Although the analysis indicates a network of policy and practice issues warranting further consideration, the diverse nature of Canadian science education makes simple identification of causal relationships elusive. Canada has a reputation for strong science achievement. However, there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education. This book fills that gap by presenting a thorough description of science education at the provincial/territorial level, as well as a more holistic description of pressing issues for Canadian science education.
