In today's organizations, it is no longer the CEO who acts as the sole strategic leader. From single individuals to larger teams and networks, leaders at all levels are infiltrating the formal organizational structure and making strategic leadership an increasingly complex endeavor. In Strategic Leadership for Turbulent Times, Kriger and Zhovtobryukh shrewdly describe the true experiences of what employees encounter as internal and external environments evolve, and how to uphold the personal and organizational values which affect both human and social capital. They examine how leadership strategies are used in real situations and

highlight the importance of managerial wisdom for sustainable growth. Finally, they offer advice for strategic leaders on leading effectively in highly turbulent economic, social, technological, and multicultural times.

The phenomenon of globalization can be described as a gradual increase in the process and dependency level that combines people, society and countries from different economic, social and political aspects of the world. Development, which is a multidimensional concept such as globalization, is a concept that includes human values as well as economic, social, cultural, demographic and political dimensions. With the globalization process, a turn to use knowledge as a factor of production has been passed, and investing in people who use knowledge in production has become important. Investment in human capital leads to the importance of development concept. The relationship of the development process with the different fields pioneered the preparation of scientific works in the context of globalization and regional studies. In this book "Economic Development: Global and Regional Studies", there are academicians who work in different universities of Turkey and the World and work in the field of development. The scientific ethics and responsibility of the works in the book belong to the authors / writers who own the department, of course, and we believe that the necessary sensitivity is shown in this issue. This book in your hand is made up of 15 chapters, and development in each chapter is analyzed from different angles. Sustainable Entrepreneurship stands for a business driven concept of sustainability which focusses on increasing both social as well as business value - so called Shared Value. This book shows why and how this unique concept has the potential to become the most recognised strategic management approach in our times. It aims to point out the opportunities that arise from putting sustainable entrepreneurship into practice. At the same time, this book is a wake-up call for all those companies and decision makers who underestimated Sustainable Entrepreneurship before or who are simply not aware of its greater dimension. Well structured chapters from different academic and business perspectives clearly outline how Sustainable Entrepreneurship contributes to solving the world's most challenging problems, such as Climate Change, Finance Crisis and Political Uncertainty, as well as to ensuring business success. The book provides a framework of orientation where the journey might go: What can a successful concept of SE look like? What are the key drivers for its realisation? What is the role of business in shaping the future of our society? The book also presents best practices and provides unique learnings as well as business insights from the international Sustainable Entrepreneurship Award ([www.se-award.org](http://www.se-award.org)). Corporate Social Responsibility (CSR) is steadily moving from the margins to the mainstream across the spectrum of private companies, NGOs and the public sector. It has grown from being a concept embraced by a small number of companies such as The Body Shop in the early 1990s to a widespread global movement. At its weakest level, it is represented by a few philanthropic gestures by organizations but, when applied in its most complete form, it can steer the organization or sector to deliver a fully fledged, system-wide, multi-stakeholder operation, accompanied by multiple types of certification. For the first time, a book brings together key issues relating to CSR as they apply to different aspects of business; it is not another generalist title about CSR. Michael Hopkins, a leading expert in the field, is joined by a number of outstanding contributors to the book, to explain how CSR has evolved since the 1990s and to offer ground-breaking insights and practical and specific applications of the concept. For example, Mervyn King explains Integrating Reporting, Deborah Leipziger looks at the laws and standards for CSR, Branding and the Supply Chain, George Starcher provides a framework for Socially Responsible Restructuring, and Adrian Henriques explores Social Accounting and Stakeholder Dialogue.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. *Sleep Disorders and Sleep Deprivation* presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Multinational corporations are not merely the problem in environmental concerns, but could also be part of the solution. The oil industry and climate change provide the clearest example of how the two are linked; what is less well-known is how the industry is responding to these concerns. This volume, available for the first time in paperback, presents a detailed study of the climate strategies of ExxonMobil, Shell and Statoil. With an innovative analytical approach, the authors explain variations at three decision-making levels: within the companies themselves, in the national home-bases of the companies, and at an international level. The analysis generates policy-relevant knowledge about whether and how corporate resistance to a viable climate policy can be overcome. The analytical approach developed by the authors is also applicable to other areas of environmental degradation where multinational corporations play a central role. The book is invaluable to students, researchers and practitioners interested in national and international environmental politics and business environmental management.

## **Climate Change and the Oil Industry**

This book introduces the highly topical issue from many different angles, sensitizing readers to the various challenges to human life posed by climate

change, identifying possible intentional and inadvertent anthropogenic factors and consequences, and seeking socially and environmentally viable solutions. The book begins by examining the impact of the climate change discussion on science, politics, economy and culture – from its historical origin in the first Club of Rome Report and its inclusion in the UN's SDGs to the Paris Agreement and beyond. Comprising 12 chapters, it analyses the factors which caused the catastrophic 2014 Kelantan flood in Malaysia, focusing on the Kuala Krai district and discusses mud architecture in Wadi Hadramout, Yemen and mitigating the expected effects of climate change on this unique architecture and cultural heritage. It also examines the economic costs of climate change on health and the increased burden on individual expenditures and national health systems. The role of climate change in the water-energy nexus and efforts to increase efficiency in energy and water end-use to increase Queensland's agricultural sector's resilience in Australia is addressed, as is water security and climate change issues in developing countries and the potential of partnership procurement strategies for managing sustainable urban water supply in Nigerian cities. It also includes a chapter offering a new approach to waste management, exploring to what extent waste can complicate our daily actions and influence environmental decay, and recommending that renewable materials be sorted and separated from other types of materials to avoid cross-contamination, to increase the value of the materials, and to ease the process of manufacturing. Subsequent chapters identify factors sustaining the municipal solid waste management and practices in Ajdabiya city in Libya, and look at accounting disclosure remedies by exploring areas in which sustainability reporting could expand beyond corporate environmental reporting to additional disclosures, curbing recklessness in pursuing merely economic goals. The book shows – from the perspective of agriculture – how human activities can increase the negative impacts of climate change on lifestyle in Malaysia, suggesting alternative lifestyles and encouraging international cooperative efforts. The last chapters evaluate the impacts of various environmental factors on the local tourism sector in Pakistan, and discuss strategies to tackle climate change, focusing on the opportunities and risks of climate engineering. Since these risks encompass inadvertent negative effects and targeted abuse for covert weather warfare and terrorism that violate the UN's ENMOD convention, the author recommends viable alternatives to deal with climate change.

### **The Future**

Spectroscopic Tricks was introduced in 1959 as a special section in the journal Applied Spectroscopy. Its purpose was to provide a means for communicating information on new devices, modifications of existing apparatuses, and other items of this nature of interest to the working spectroscopist. That it has proved valuable is indicated by the continuing publication of this section now under the title of Spectroscopic Techniques. However, the usefulness of these contributions,

scattered through the many issues of the journal, diminishes as time passes since the reader must consult the annual indices of many volumes of the journal to find the contribution that may hold the solution to his problem. The collection of the contributions into a single volume for the years 1959 through 1965 made it easier for the reader to make this search. The success of the first volume has prompted the continuation of these collections. The contributions in this second volume are selected from the years 1966 through 1969. They are arranged in the same manner as in the previous volume according to the area of spectroscopy. Those concerned with the same devices are placed together so that the reader can compare them readily. To maintain the advantages inherent in a single collection of articles, the subject index for this volume includes all the entries and page references from the original volume. Both author and journal indices are also provided, the latter citing the original Applied Spectroscopy edition.
