This book is intended to be a textbook for undergraduate students studying electrical and electronic engineering in universities and colleges. Therefore, the level and amount of the knowledge to be transferred to the reader is kept to as much as what can be taught in one academic semester of a university or a college course. Although the subject is rather classical and somehow well established in some respects, it is vast and can be difficult to grasp if unnecessary details are not avoided. This book is aimed to give the reader just what is necessary - with plenty of short and easily understandable examples and drawings, figures, and tables. A course on electromechanical energy conversion is a necessity in all universities and colleges entitled to grant a license for electrical engineering. This book is aimed at meeting the requirements of this essential subject by providing necessary information to complete the course. A compact chapter is included with figures and tables on energy and the restraints on its production brought about by global climate change. A new approach has been tried for some of the classic subjects including magnetic circuits and electrical machines together with today's much-used motors.

The Secret Science

I am a Standupster, A Second Generation Survivor's Account, by the Daughter of David Zauder, is the first-ever biography of Internationally Acclaimed Holocaust and Anti-bullying Educator and Speaker, Karen Zauder Brass. Her book is a very rare exploration into the effects of being raised by a parent who suffered the inhumanity of genocide and its unimaginable costs. Brass comes out of the shadows and openly expresses what so few Second Generation Survivors are willing to discuss. The deep injury to their survivor parent's psyches cannot simply be put aside and has deep and lasting effects on their children. From her earliest years, Brass was fully aware of who her surviving parent needed her to be. This is a book of deep introspection that also shares the Author's path to self-acceptance, happiness, and her powerful desire to make changes in our world by educating audiences, one human being at a time, to not stand by and allow for the suffering of others; To be a Standupster(r). Brass provides the descriptive background of her Father, David Zauder's survival of the Krakow Ghetto and four concentration camps including Auschwitz. His survival of a true hell on Earth, and his success in emigrating from Poland, after his liberation by General Patton's 3rd Army Tank Division, then travel from Germany to America and becoming one of this country's leading cornet and trumpet players will inspire you and touch your heart. For educators, Brass weaves her Father's story into a groundbreaking international anti-bullying campaign which has been experienced by thousands of Middle and High School aged students, adults, and hundreds of high-ranking military officials. Acclaimed by educators, principals and parents alike, Brass' Standupster(r) presentations and campaign has been effective in reducing bullying in schools because it provides a rallying cry for everyone to never stand by in the face of hatred, bigotry, and injustice; the program calls on the audience to use personal responsibility and moral leadership to rise together as being a Standupster(r) to stop the bullyin

A wind tunnel investigation was conducted in the Langley 12-Foot Low-Speed Wind Tunnel to study the low-speed stability and control characteristics of a series of four flying wings over an extended range of angle of attack (-8 deg to 48 deg). Because of the current emphasis on reducing the radar cross section of new military aircraft, the planform of each wing was composed of lines swept at a relatively high angle of 60 deg, and all the trailing-edge lines were aligned with one of the two leading edges. Three arrow planforms with different aspect ratios and one diamond planform were tested. The models incorporated leading-edge flaps for improved pitching-moment characteristics and lateral stability and had three sets of trailing-edge flaps that were deflected differentially for roll control, symmetrically for pitch control, and in a split fashion for yaw control. Top bodies of three widths and twin vertical tails of various sizes and locations were also tested on each model. A large aerodynamic database was compiled that could be used to evaluate some of the trade-offs involved in the design of a configuration with a reduced radar cross section and good flight dynamic characteristics.
