### **Factory and Industrial Management**

A collection of papers on the determinants and consequences of foreign direct investment (FDI) in the real and financial sectors of industrial countries. The text sheds new light on the determinants of FDI, in particular the role of governmental incentives. Another main topic is the role of FDI in the east European accession countries. It provides insights into the question of whether EU enlargement will have consequences for capital flows into those countries. Since the start of European monetary union, the discussion on cross-border mergers in the European

banking industry has intensified. The final part of the book contains contributions to this debate.

### **The Craftsman, a constitutional and industrial review**

Realizing the need of interaction between universities and research groups in industry, the European Consortium for Mathematics in Industry (ECMI) was founded in 1986 by mathematicians from ten European universities. Since then it has been continuously extending and now it involves about all European countries. The aims of ECMI are

- To promote the use of mathematical models in industry.
- To educate industrial mathematicians to meet the growing demand for such experts.
- To operate on a European Scale.

Mathematics, as the language of the sciences, has always played an important role in technology, and now is applied also to a variety of problems in commerce and the environment. European industry is increasingly becoming dependent on high technology and the need for mathematical expertise in both research and development can only grow. These

new demands on mathematics have stimulated academic interest in Industrial Mathematics and many mathematical groups world-wide are committed to interaction with industry as part of their research activities. ECMI was founded with the intention of offering its collective knowledge and expertise to European Industry. The experience of ECMI members is that similar technical problems are encountered by different companies in different countries. It is also true that the same mathematical expertise may often be used in differing industrial applications.

### **I/EC. Industrial and engineering chemistry**

A social dialogue has been in progress concerning industrial relations on a European level. The publication of the first Report of the European Commission on Industrial Relations demonstrates that, rather than merely harmonizing regimes, EU policy is focusing on the pursuit of basic aims.

This book contains a comprehensive review of current industrial cleaning techniques including those using traditional low, medium, and high pressure water, solvents, chemical compounds and foam, wet and soluble abrasives, 'pigging devices', biotechnology processes and the latest computerized 'state-of-the-art' in-line automatic techniques. Emphasis is firmly placed on the practical aspects of designing, manufacturing, and operating cleaning equipment and systems. Industrial cleaning applications include: municipal drains and sewers, road tanker and container depots, chemical and petrochemical plants, offshore oil/gas

platforms, paper mills, paint and similar manufacturing processes, IBC and drum cleaning systems, pharmaceutical, biotech and cosmetic plants, food processing, marine, dry-dock installations and nuclear plant decontamination projects, together with a selection of case studies relating to typical industrial cleaning problems and injuries associated with high pressure water jetting activities. In addition to actual techniques, the book examines the increasing effect of international health, safety, training, and environmental legislation on cleaning activities, with particular reference to European directives, the U.S.A., and regulations controlling cleaning standards, procedures, and plant designs in the pharmaceutical and food processing industries. Useful information sources are listed throughout the book.
