Educational Psychology: Developing Learners is known for its exceptionally clear and engaging writing, its in-depth focus on learning, and its extensive concrete applications. Its unique approach helps teachers understand concepts by encouraging them to examine their own learning and then showing them how to apply these concepts. The book gives an in-depth understanding of the central ideas of educational psychology, and moves seamlessly between theory and applications, including innumerable concrete examples—video cases, written cases, artifacts, and more—to help the reader connect educational psychology to children and classrooms.

In this Seventh Edition of AN INTRODUCTION TO THE HISTORY OF PSYCHOLOGY, authors Hergenhahn and Henley demonstrate that most of the concerns of contemporary psychologists are manifestations of themes that have been part of psychology for hundreds--or even thousands--of years. The book's numerous photographs and pedagogical devices, along with its biographical material on key figures in psychology, engage readers and facilitate their understanding of each chapter. An Introduction to the History of Psychology

Emergence of Individual Differences in Social Context
ROBERT B. ZAJONC A priest who was a heavy smoker once asked his bishop if it was all right if he smoked while praying. Appalled, the bishop chastised the priest for the very thought of soiling the solemn moment of prayer with such a filthy habit. Some years passed and the bishop came again through our priest's parish. And our tormented priest asked again about his predicament. But he asked a somewhat different question: "Your excellency," he said, "is it all right to pray while smoking?" There was no hesitation in the bishop's answer. "Of course!" he said. "There is nothing in the world that should keep you from praying. You can always pray, my son. You should miss no opportunity to pray. Whenever you wish to pray, by all means pray!" The relationship between individual differences and social psychology is roughly the same as between smoking and praying. Many social psychologists, and especially experimental social psychologists, are openly disdainful of individual difference variables. They avoid them in their studies and refuse to incorporate them in theories. The reasons for their (and we really should say "my" because the author is no exception in this matter) attitude are not obvious.

Why have people from different cultures and eras

formulated myths and stories with similar structures? What does this similarity tell us about the mind, morality, and structure of the world itself? From the author of *12 Rules for Life: An Antidote to Chaos* comes a provocative hypothesis that explores the connection between what modern neuropsychology tells us about the brain and what rituals, myths, and religious stories have long narrated. A cutting-edge work that brings together neuropsychology, cognitive science, and Freudian and Jungian approaches to mythology and narrative, *Maps of Meaning* presents a rich theory that makes the wisdom and meaning of myth accessible to the critical modern mind.
