Never has contemporary fiction been more widely discussed and passionately analysed; recent years have seen a huge growth in the number of reading groups and in the interest of a non-academic readership in the discussion of how novels work. Drawing on his weekly Guardian column, 'Elements of Fiction', John Mullan examines novels mostly of the last ten years, many of which have become firm favourites with reading groups. He reveals the rich resources of novelistic technique, setting recent fiction alongside classics of the past. Nick Hornby's adoption of a female narrator is compared to Daniel Defoe's; Ian McEwan's use of weather is set against Austen's and Hardy's; Carole Shield's chapter divisions are likened to Fanny Burney's. Each section shows how some basic element of fiction is used. Some topics (like plot, dialogue, or location) will appear familiar to most novel readers; others (metanarrative, prolepsis, amplification) will open readers' eyes to new ways of understanding and appreciating the writer's craft. How Novels Work explains how the pleasures of novel reading often come from the formal ingenuity of the novelist. It is an entertaining and stimulating exploration of that ingenuity. Addressed to anyone who is interested in the close reading of fiction, it makes visible techniques and effects we are often only half-aware of as we read. It shows that literary criticism is something that all fiction enthusiasts can do.

Contemporary novels discussed include: Monica Ali's Brick Lane; Martin Amis's Money; Margaret Atwood's The Blind Assassin; A.S. Byatt's Possession; Jonathan Coe's The Rotters' Club; J.M. Coetzee's Disgrace; Michael Cunningham's The Hours; Don DeLillo's Underworld; Michel Faber's The Crimson Petal and the White; Ian Fleming's From Russia with Love; Jonathan Franzen's The Corrections; Mark Haddon's The Curious Incident of the Dog in the Night-time; Patricia Highsmith's Ripley under Ground; Alan Hollinghurst's The Spell; Nick Hornby's How to Be Good; Ian McEwan's Atonement; John le Carré's The Constant Gardener; Andrea Levy's Small Island; David Mitchell's Cloud Atlas; Andrew O'Hagan's Personality; Orhan Pamuk's My Name Is Red; Ann Patchett's Bel Canto; Ruth Rendell's Adam and Eve and Pinch Me; Philip Roth's The Human Stain; Jonathan Safran Foer's Everything Is Illuminated; Carol Shields's Unless; Zadie Smith's White Teeth; Muriel Spark's Aiding and Abetting; Graham Swift's Last Orders; Donna Tartt's The Secret History; William Trevor's The Hill Bachelors; and Richard Yates's Revolutionary Road .

What you eat and drink can affect the way your medicines work. Use this guide to alert you to possible "food-drug interactions" and to help you learn what you can do to prevent them. In this guide, a food-drug interaction is a change in how a medicine works caused by food, caffeine, or alcohol. A food-drug interaction can: prevent a medicine from working the way it should cause a side effect from a medicine to get worse or better cause a new side effect A medicine can also change the way your body uses a food. Any of these changes can be harmful. This guide covers interactions between some

common prescription and over-the counter medicines and food, caffeine, and alcohol. These interactions come from medicine labels that FDA has approved. This guide uses the generic names of medicines, never brand names.

Reiki is a technique for stress reduction which is also claimed to promote healing. It is said to create many beneficial effects including relaxation and feelings of peace, security and well-being. The technique is thought to have originated in Tibet, but was rediscovered by a Japanese Buddhist early in the 20th century. This revised edition includes the history of Reiki, and describes several successful approaches to integrate Reiki into patient care. Also included are pictures of the Usui memorial in Tokyo and of Mount Kurama where Reiki was discovered.

Tele-tech

This book explores the interface that exists between the human energy field and the Universal Field of energy in which we live. It shows how these fields can be utilised for distant diagnosis and treatment. It also illustrates that the surest and most effective way to ameliorate a defect in any biological system, is to modulate the interacting and interdependent energy fields by way of the chakras. The same energy fields can be used to take photographs of distant objects, particularly the energy structures of living human tissues and pathological states existing in them. The vibratory patterns and potencies of homoeopathic remedies can also be drawn from the ether-fields and impregnated into neutral substances such as water or alcohol solutions which have a capacity for memory. Radionics is a healing art that links the physical world with the unseen worlds lying beyond the physical senses. Diagnostically it probes to the levels of causation of disease; therapeutically it is gentle and non-invasive.
