Cold and ultracold collisions occupy a strategic position at the intersection of several powerful themes of current research in chemical physics, in atomic, molecular and optical physics, and even in condensed matter. The nature of these

collisions has important consequences for optical manipulation of inelastic and reactive processes, precision measurement of molecular and atomic properties, matter-wave coherences and quantum-statistical condensates of dilute, weakly interacting atoms. This crucial position explains the wide interest and explosive growth of the field since its inception in 1987. The author reviews elements of the quantum theory of scattering theory, collisions taking place in the presence of one or more light fields, and collisions in the dark, below the photon recoil limit imposed by the presence of any light field. Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability.

Big, strong Elvis is stupid but he looks like a hero. So who is more likely to get the big part in the school play? But when the mysterious beast, Krindlekrax, threatens Lizard Street and everyone who lives there, it is Ruskin who saves the day and proves he is the stuff that heroes are made of after all.

During the twentieth century, Britain turned from one of the most deeply religious nations of the world into one of the most secularised nations. This book provides a comprehensive account of religion in British society and culture between 1900 and 2000. It traces how Christian Puritanism and respectability framed the people amidst world wars, economic depressions, and social protest, and how until the 1950s religious revivals fostered mass enthusiasm. It then examines the sudden and dramatic changes seen in the 1960's and the appearance of religious militancy in the 1980s and 1990s. With a focus on the themes of faith cultures, secularisation, religious militancy and the spiritual revolution of the New Age, this

Poetry. Latino/Latina Studies. LGBT Studies. "Like Whitman, Quesada is a poet of motion—journeying to the center of the US, where the traditions and innovations of first-generation Americans traverse the meditative starbursts of hills; ford rivers; cross prairies; and seek out 'the alpenglow of tomorrow and tomorrow.' From Costa Rica to Los Angeles and across the continent, Quesada's poems chronicle one family's history: from the courtship of his parents to their separation, from his childhood struggles to awakening desire from his mother's lottery winnings to his own personal losses, Ruben Quesada carries us toward 'that seam in space' where dream and experience intersect. This isn't the story of what it means to come to

this country. It's the story of what it means to belong here"—D. A. Powell.

It began as an intriguing piece of puzzle-solving - and ended with the discovery of the greatest secret of all. Dissatisfied with the explanations of previous researchers, Richard Andrews and Paul Schellenberger applied mathematical logic to the enduring mystery of the Rennes-le-Chateau and the 'treasure' alleged to be buried there. The quest began with an investigation into the activities of a group of 19th century priests who had become embroiled in the legend. These priests had grown rich because of their involvement and had maintained the anonymity of the paymasters, but in 1993 an extraordinary clue came to light which suggested the priests were engaged in activities at odds with traditional Roman Catholic pastimes. A series of paintings was unearthed which incorporated a cryptic, obscure geometry; a set of interrelating shapes with a very direct link to the priests' habitat and spiritual role. Through the centuries a pattern emerged - a web of concealment on maps, in fine art, on tombstones which defied coincidence and pointed to one very specific location

Writers love to tell stories, so when L. Elisabeth Beattie remarked that her next book ought to be a Kentucky writers' cookbook, Betty Layman Receveur replied, "Actually, all my sons ever demand of me is my pound cake." Adding a cup of this and a pinch of that, Beattie cooked up Savory Memories, a collection of twenty-two essays about particular dishes that call up warm memories in the writers. Featuring recipes and memories from writers such as Joy Bale Boone, George Ella Lyon, Ronni Ludy, Ed McClanahan, Sena Jeter Naslund, and Richard Taylor, this is both a cookbook and a compendium of sentiments. This warm and enjoyable blending of essays, illustrations, and recipes is leavened with humor and laden with nostalgia. As much as the food, these writers celebrate the personalities who lovingly prepared and provided their favorite dishes, sustaining life and helping to shape the personas of the authors themselves. A collection of highly personal

recollections, Savory Memories is a veritable smorgasbord of delights.

The growing popularity of the Internet along with the availability of powerful computers and high speed networks as low cost commodity components are helping to change the way we do computing. These new technologies are enabling the coupling of a wide variety of geographically distributed resources, such as parallel supercomputers, storage systems, data sources, and special devices, that can then be used as a unified resource and thus form what is popularly known as the “Grids”.
