Projects to help those most disadvantaged in the labour market to get jobs or go on to further education or training can play an important part in urban regeneration. This report describes case studies for fourteen such projects nationwide. These were selected on account of their good record in getting their clients into work or on training or further education courses, or because they were particularly innovative in their approach. The book identifies those key elements of good practice in developing and managing the projects which were most effective in helping clients, and will be of interest to those involved in training or counselling the unemployed.

An indispensable guide for grad students and academics who want to find fulfilling careers outside higher education. An estimated ninety-three percent of graduate students in the humanities and social sciences won't get a tenure-track job, yet many still assume that a tenured professorship is the only successful outcome for a PhD. With the academic job market in such crisis, *Leaving Academia* helps grad

students and academics in any scholarly field find satisfying careers beyond higher education. Short and pragmatic, the book offers invaluable advice to visiting and adjunct instructors ready to seek new opportunities, to scholars caught in “tenure-trap” jobs, to grad students interested in nonacademic work, and to committed academics who want to support their students and contingent colleagues more effectively. After earning a PhD in classics from the University of Virginia and teaching at Tulane, Christopher Caterine left academia for a job at a corporate consulting firm. During his career transition, he went on more than 150 informational interviews and later interviewed twelve other professionals who had left higher education for diverse fields. Drawing on everything he learned, Caterine helps readers chart their own course to a rewarding new career. He addresses dozens of key issues, including overcoming psychological difficulties, translating academic experience for nonacademics, and meeting the challenges of a first job in a new field. Providing clear, concrete ways to move forward at each stage of your career change, even when the going gets tough, *Leaving Academia* is both realistic and filled with hope.

Policy Research Working Papers

Contains twelve papers contributing fresh research to important issues concerning worker welfare. This title offers answers to a number of policy related questions such as: Why are jobs designed the way they are? Does seniority-based pay provide a sufficient

motivation for workers? What policies are effective in combating discrimination?

Nordic Labour Market Research on Register Data

Drawing on the historical changes in five areas--the jobs of telephone operators, workers in the printing and publishing industries, information and data processors, retail clerks, and nurses--this volume offers a comprehensive examination of how microelectronics and telecommunications have affected women's work and their working environments and looks ahead to what can be expected for women workers in the next decade. It also offers perspectives on how workers can more easily adapt to the changing workplace and addresses the controversial topic of job insecurity as a result of an influx of advanced electronic systems.

At the beginning of the twentieth century, Venezuela had one of the poorest economies in Latin America, but by 1970 it had become the richest country in the region and one of the twenty richest countries in the world, ahead of countries such as Greece, Israel, and Spain. Between 1978 and 2001, however, Venezuela's economy went sharply in reverse, with non-oil GDP declining by almost 19 percent and oil GDP by an astonishing 65 percent. What accounts for this drastic turnabout? The editors of *Venezuela Before Chávez*, who each played a policymaking role in the country's

economy during the past two decades, have brought together a group of economists and political scientists to examine systematically the impact of a wide range of factors affecting the economy's collapse, from the cost of labor regulation and the development of financial markets to the weakening of democratic governance and the politics of decisions about industrial policy. Aside from the editors, the contributors are Omar Bello, Adriana Bermúdez, Matías Braun, Javier Corrales, Jonathan Di John, Rafael Di Tella, Javier Donna, Samuel Freije, Dan Levy, Robert MacCulloch, Osmel Manzano, Francisco Monaldi, María Antonia Moreno, Daniel Ortega, Michael Penfold, José Pineda, Lant Pritchett, Cameron A. Graeber asked this question in a playful, provocative essay titled "On the Phenomenon of Bullshit Jobs." It went viral. After one million online views in seventeen different languages, people all over the world are still debating the answer. There are hordes of people—HR consultants, communication coordinators, telemarketing researchers, corporate lawyers—whose jobs are useless, and, tragically, they know it. These people are caught in bullshit jobs. Graeber explores one of society's most vexing and deeply felt concerns, indicting among other villains a particular strain of finance capitalism that betrays ideals shared by thinkers ranging from Keynes to Lincoln. "Clever and charismatic" (The New Yorker), Bullshit Jobs gives individuals, corporations, and societies permission to undergo a shift in values, placing creative and caring work at the center of our culture. This book is for everyone who wants to turn their vocation back into an avocation and "a thought-provoking examination of our working lives" (Financial Times).

This volume contains a selection of papers referring to lectures presented at the symposium "Operations Research 2003" (OR03) held at the Ruprecht Karls-Universitiit Heidelberg, September 3 - 5, 2003. This international con ference took place under the auspices of the German Operations Research So ciety (GOR) and of Dr. Erwin Teufel, prime minister of Baden-Wurttemberg. The symposium had about 500 participants from countries all over the world. It

attracted academicians and practitioners working in various field of Operations Research and provided them with the most recent advances in Operations Research and related areas in Economics, Mathematics, and Computer Science. The program consisted of 4 plenary and 13 semi-plenary talks and more than 300 contributed papers selected by the program committee to be presented in 17 sections. Due to a limited number of pages available for the proceedings volume, the length of each article as well as the total number of accepted contributions had to be restricted. Submitted manuscripts have therefore been reviewed and 62 of them have been selected for publication. This refereeing procedure has been strongly supported by the section chairmen and we would like to express our gratitude to them. Finally, we also would like to thank Dr. Werner Muller from Springer-Verlag for his support in publishing this proceedings volume.

Even as the United States enjoys a booming economy and historically low levels of unemployment, millions of Americans remain out of work or underemployed, and joblessness continues to plague many urban communities, racial minorities, and people with little education. In *Jobs for the Poor*, Timothy Bartik calls for a dramatic shift in the way the United States confronts this problem. Today, most efforts to address this problem focus on ways to make workers more employable, such as job training and welfare reform. But Bartik argues that the United States should put more emphasis on ways to increase the interest of employers in creating jobs for the poor—or the labor demand side of the labor market. Bartik's bases his

case for labor demand policies on a comprehensive review of the low-wage labor market. He examines the effectiveness of government interventions in the labor market, such as Welfare Reform, the Earned Income Tax Credit, and Welfare-to-Work programs, and asks if having a job makes a person more employable. Bartik finds that public service employment and targeted employer wage subsidies can increase employment among the poor. In turn, job experience significantly increases the poor's long-run earnings by enhancing their skills and reputation with employers. And labor demand policies can avoid causing inflation or displacing other workers by targeting high-unemployment labor markets and persons who would otherwise be unemployed. Bartik concludes by proposing a large-scale labor demand program. One component of the program would give a tax credit to employers in areas of high unemployment. To provide disadvantaged workers with more targeted help, Bartik also recommends offering short-term subsidies to employers—particularly small businesses and nonprofit organizations—that hire people who otherwise would be unlikely to find jobs. With experience from subsidized jobs, the new workers should find it easier to obtain future year-round employment. Although these efforts would not catapult poor families into the middle class overnight, Bartik offers a powerful argument that having a full-time worker in every household would help improve the lives of millions. Jobs for the Poor makes a compelling case that full employment can be achieved if the country has the political will and adopts policies that address both sides of the labor

market. Copublished with the W. E. Upjohn Institute for Economic Research

Recent Developments in Operational Research

Operations Research Proceedings 2007

After two decades of rapid technological and structural change and an overall record of poor economic performance, Canadians need to take stock of the ongoing transformation of the labour market and its implications for public policy. The fundamental changes to the nature of work itself suggest that labour and social policies established decades ago may no longer be adequate or appropriate. Moreover, the continuing perception of increased instability and worsening employment outcomes, and the growing

concern over increased earnings inequality and labour market polarisation, have raised serious questions about the role of government not only in addressing the consequences of economic adjustment but also in facilitating or, worse, hampering this process. In *Adapting Public Policy to a Labour Market in Transition* leading labour market specialists examine specific areas of public policy that have generated considerable attention and debate in recent years. They provide new evidence on issues of utmost concern to the well-being of Canadians and a solid assessment of the challenges and avenues for policy reform.

Writing a Research Paper in Political Science

High school students, two-year college students, and university students all need to know how to write a well-reasoned, coherent research paper—and for decades Kate Turabian's *Student's Guide to Writing College Papers* has helped them to develop this critical skill. In the new fourth edition of Turabian's popular guide, the team behind Chicago's widely respected *The Craft of Research* has reconceived and renewed this classic for today's generation. Designed for less advanced writers than Turabian's *Manual of Writers of Research Papers, Theses, and Dissertations, Seventh Edition*, Gregory G. Colomb and Joseph M. Williams here introduce students to the art of defining a topic, doing high-quality research with limited resources, and writing an engaging and solid college paper. *The Student's Guide* is organized

into three sections that lead students through the process of developing and revising a paper. Part 1, "Writing Your Paper," guides students through the research process with discussions of choosing and developing a topic, validating sources, planning arguments, writing drafts, avoiding plagiarism, and presenting evidence in tables and figures. Part 2, "Citing Sources," begins with a succinct introduction to why citation is important and includes sections on the three major styles students might encounter in their work—Chicago, MLA, and APA—all with full coverage of electronic source citation. Part 3, "Style," covers all matters of style important to writers of college papers, from punctuation to spelling to presenting titles, names, and numbers. With the authority and clarity long associated with the name Turabian, the fourth edition of *Student's Guide to Writing College Papers* is both a solid introduction to the research process and a convenient handbook to the best practices of writing college papers. Classroom tested and filled with relevant examples and tips, this is a reference that students, and their teachers, will turn to again and again.

Research Paper

The economic boom of the 1990s veiled a grim reality: in addition to the growing gap between rich and poor, the gap between good and bad quality jobs was also expanding. The postwar prosperity of the mid-twentieth century had enabled millions of American workers to join the middle class, but as author Arne L. Kalleberg shows, by the 1970s this upward movement had slowed, in part due to the steady disappearance of secure, well-paying industrial jobs. Ever since, precarious employment has been on the rise—paying low wages, offering few benefits, and with virtually no long-term security. Today, the polarization between workers with higher skill levels and those with low skills and low wages is more entrenched than ever. *Good Jobs, Bad Jobs* traces this trend to large-scale transformations in the American labor market and the changing demographics of low-wage workers. Kalleberg draws on nearly four decades of survey data, as well as his own research, to evaluate trends in U.S. job quality and suggest ways to improve American labor market practices and social policies. *Good Jobs, Bad Jobs* provides an insightful analysis of how and why precarious employment is gaining ground in the labor market and the role these developments have played in the decline of the middle class. Kalleberg shows that by

the 1970s, government deregulation, global competition, and the rise of the service sector gained traction, while institutional protections for workers—such as unions and minimum-wage legislation—were weakened. Together, these forces marked the end of postwar security for American workers. The composition of the labor force also changed significantly; the number of dual-earner families increased, as did the share of the workforce comprised of women, non-white, and immigrant workers. Of these groups, blacks, Latinos, and immigrants remain concentrated in the most precarious and low-quality jobs, with educational attainment being the leading indicator of who will earn the highest wages and experience the most job security and highest levels of autonomy and control over their jobs and schedules. Kalleberg demonstrates, however, that building a better safety net—increasing government responsibility for worker health care and retirement, as well as strengthening unions—can go a long way toward redressing the effects of today’s volatile labor market. There is every reason to expect that the growth of precarious jobs—which already make up a significant share of the American job market—will continue. *Good Jobs, Bad Jobs* deftly shows that the decline in U.S. job quality is not the result of fluctuations in the business cycle, but rather the result of economic restructuring and the disappearance of institutional protections for workers. Only government, employers and labor working together on long-term strategies—including an expanded safety net, strengthened legal protections, and better training opportunities—can help reverse this trend. Adapting Public Policy to a Labour Market in Transition

The symposium Operations Research 2007 was held from September 5-7, 2007 at the Saarland University in Saarbrücken. This international conference is at the same time the annual meeting of the German Operations Research Society (GOR). The transition in Germany (and many other countries in Europe) from a production orientation to a service society combined with a continuous demographic change generated a need for intensified Operations Research activities in this area. On that account this conference has been devoted to the role of Operations Research in the service industry. The links to Operations Research are manifold and include many different topics which are particularly emphasized in scientific sections of OR 2007. More than 420 participants from 30 countries made this event very international and successful. The program consisted of three plenary, eleven semi-plenary and more than 300 contributed presentations, which had been organized in 18 sections. During the conference, the GOR Dissertation and Diploma Prizes were awarded. We congratulate all winners, especially Professor Wolfgang Domschke from the Darmstadt University of Technology, on receiving the GOR Scientific Prize Award.

In Writing a Research Paper in Political Science, author Lisa Baglione breaks down the research paper into its constituent parts and shows students precisely how to complete each component. The author provides encouragement at each stage and faces pitfalls head on, giving advice and examples so that students move through each task successfully. Students are shown how to craft the right research question, find good sources and properly summarize them, operationalize concepts, design good tests for their hypotheses, and present and analyze quantitative and qualitative data. Even writing an introduction, coming up with effective headings and titles, presenting a conclusion, and the important steps of editing and revising are covered. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. In this Third Edition, updated sample research topics come from American government, gender studies, comparative politics, and international relations. And now, more extensive materials are available on the web, including checklists and worksheets that help students tackle each step, calendar ideas to help them complete their paper on time, and a glossary.

Is today's language at an all-time low? Are pronunciations like cawfee and chawklit bad English?

Is slang like my bad or hook up improper? Is it incorrect to mix English and Spanish, as in Yo quiero Taco Bell? Can you write Who do you trust? rather than Whom do you trust? Linguist Edwin Battistella takes a hard look at traditional notions of bad language, arguing that they are often based in sterile conventionality. Examining grammar and style, cursing, slang, and political correctness, regional and ethnic dialects, and foreign accents and language mixing, Battistella discusses the strong feelings evoked by language variation, from objections to the pronunciation NU-cu-lar to complaints about bilingual education. He explains the natural desire for uniformity in writing and speaking and traces the association of mainstream norms to ideas about refinement, intelligence, education, character, national unity and political values. Battistella argues that none of these qualities is inherently connected to language. It is tempting but wrong, Battistella argues, to think of slang, dialects and nonstandard grammar as simply breaking the rules of good English. Instead, we should view language as made up of alternative forms of orderliness adopted by speakers depending on their purpose. Thus we can study the structure and context of nonstandard language in order to illuminate and enrich traditional forms of language, and make policy decisions based on an informed engagement. Re-examining longstanding and heated debates, *Bad Language* will appeal to a wide spectrum of readers engaged and interested in the debate over what constitutes proper language.

Precarious Jobs in Labour Market

Venezuela Before Chávez

Jobs for the Poor

A New York Times Bestseller. A “fascinating” (Thomas L. Friedman, New York Times) look at how digital technology is transforming our work and our lives. In recent years, Google’s autonomous cars have logged thousands of miles on American highways and IBM’s Watson trounced the best human Jeopardy! players. Digital technologies—with hardware, software, and networks at their core—will in the near future diagnose diseases more accurately than doctors can, apply enormous data sets to transform retailing, and accomplish many tasks once considered uniquely human. In *The Second Machine Age* MIT’s Erik Brynjolfsson and Andrew McAfee—two thinkers at the forefront of their field—reveal the forces driving the reinvention of our lives and our economy. As the full impact of digital technologies is felt, we will realize immense bounty in the form of dazzling personal technology, advanced infrastructure, and near-boundless access to the cultural items that enrich our lives. Amid this bounty will also be wrenching change. Professions of all kinds—from lawyers to truck drivers—will be forever upended. Companies will be forced to transform or die. Recent economic indicators reflect this shift: fewer people are working, and wages are falling even as productivity and profits

soar. Drawing on years of research and up-to-the-minute trends, Brynjolfsson and McAfee identify the best strategies for survival and offer a new path to prosperity. These include revamping education so that it prepares people for the next economy instead of the last one, designing new collaborations that pair brute processing power with human ingenuity, and embracing policies that make sense in a radically transformed landscape. A fundamentally optimistic book, *The Second Machine Age* alters how we think about issues of technological, societal, and economic progress.

Jobs, Training, and Worker Well-Being

This volume brings out recent developments and current activity in different areas of operational research. The topics covered include the following major areas: mathematical programming, queuing theory, reliability and maintenance, inventory and production control, statistical methods, networks and sequencing, and information technology. *Recent Developments in Operational Research* will be of considerable value and interest to operational researchers, both theoreticians and practitioners, as well as a reference source for research workers.

Economics Working Papers

This book constitutes the thoroughly refereed post-workshop proceedings of the 13th International Workshop on Job Scheduling Strategies for Parallel Processing, JSSPP 2007, held in Seattle, WA, USA, in

June 2007, in conjunction with the 21st ACM International Conference on Supercomputing, ICS 2007. The 10 revised full research papers presented went through the process of strict reviewing and subsequent improvement. The papers cover all current issues of job scheduling strategies for parallel processing from the supercomputer-centric viewpoint but also address many nontraditional high-performance computing and parallel environments that cannot or need not access a traditional supercomputer, such as grids, Web services, and commodity parallel computers. The papers are organized in topical sections on performance and tools, queueing systems, as well as grid and heterogeneous architectures.

Model research papers from across the disciplines

More and more people are choosing to earn a living at home. In *Work, At Home* explores the meaning and experience of this type of employment by covering a wide range of issues including: * social relationships * current research methodologies * statistical analyses of global labour markets * the emotional and psychological processes of self-management * home relations. Presenting statistical analyses of labour markets in North America, Europe, Asia and Australia, *In Work, At Home* provides a valuable introduction to

the issues and debates surrounding homeworking and will appeal to students across a range of disciplines, including sociology, business studies and women's studies.

Good Jobs, Bad Jobs

This book constitutes the thoroughly refereed postproceedings of the 9th International Workshop on Job Scheduling Strategies for Parallel Processing, JSSPP 2003, held in Seattle, Washington in June 2003 in conjunction with HPDC-12 and FFG-8. The 13 revised full papers presented were carefully refereed and selected during two rounds of reviewing and revision. The papers present state-of-the-art research results in the area with particular emphasis on conventional parallel systems (including infrastructure scheduling algorithms, I/O issues, and QoS), on scheduling issues in the context of grid computing, and on methodological aspects of performance evaluation in parallel job scheduling.

Leaving Academia

The international conference "Operations Research 2008", the annual meeting of the German Operations Research Society (GOR), was held at the University of Augsburg on September 3-5, 2008. About 580 participants from more than 30 countries presented and listened to nearly 400 talks on a broad range of Operations Research. The general subject "Operations Research and Global Business" stresses the important role of Operations Research in improving decisions in

the increasingly complex business processes in a global environment. The plenary speakers Morris A. Cohen (Wharton School) and Bernd Liepert (Executive Board of KUKA Robotics) addressed this subject. Moreover, one of the founders of Operations Research, Saul Gass (University of Maryland), gave the opening speech on the early history of Operations Research. This volume contains 93 papers presented at the conference, selected by the program committee and the section chairs, forming a representative sample of the various subjects dealt with at Operations Research 2008. The volume follows the structure of the conference, with 12 sections, grouped into six "Fields of Applications" and six "Fields of Methods and Theory". This structure in no way means a separation of theory and application, which would be detrimental in Operations Research, but displays the large spectrum of aspects in the focus of the papers. Of course, most papers present theory, methods and applications together.

A Research Paper

Designed to reach a wide audience of scholars and policymakers, the Brookings-Wharton Papers on Urban Affairs is an annual series that serves as a forum for cutting-edge, accessible research on urban policy. The editors seek to integrate broader research into the urban policy discussion by bringing urban studies scholars together with economists and researchers studying subjects with important urban implications. In this issue, papers examine a range of issues that are relevant to urban economics: —the

effects of job location in an urban area on residential choice patterns —the impact of race, ethnicity, and gender on mortgage lending —the effects of urban characteristics on the development of new patents
The volume also contains three papers on urban development outside of the United States: —urban sprawl in Europe —rural-to-urban migration patterns in Brazil —location patterns of industry agglomeration across Japanese cities

Research Paper NC.

Abstract: In this paper, the authors examine the impact of reductions in barriers to migration on the consumption of rural households in China. The authors find that increased migration from rural villages leads to significant increases in consumption per capita, and that this effect is stronger for poorer households within villages. Household income per capita and non-durable consumption per capita both increase with out-migration, and increase more for poorer households. The authors also establish a causal relationship between increased out-migration and investment in housing and durable goods assets, and these effects are also stronger for poorer households. The authors do not find robust evidence, however, to support a connection between increased migration and investment in productive activity. Instead, increased migration is associated with two significant changes for poorer households: increases both in the total labor supplied to productive activities and in the land per capita managed by the household. In examining the effect of migration, we pay

considerable attention to developing and examining our identification strategy.

How to Get a Job in the Federal Government

The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make

it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including:

- When, where, and what to publish
- Writing a foolproof grant application
- Cultivating references and crafting the perfect CV
- Acing the job talk and campus interview
- Avoiding the adjunct trap
- Making the leap to nonacademic work, when the time is right

The Professor Is In addresses all of these issues, and many more.
