Chartered Mechanical Engineer

Air and Gas Drilling Manual, Fourth Edition: Applications for Oil, Gas and Geothermal Fluid Recovery Wells, and Specialized Construction Boreholes, and the History and Advent of the Directional DTH delivers the fundamentals and current methods needed for engineers and managers engaged in drilling operations. Packed with updates, this reference discusses the engineering modelling and planning aspects of underbalanced drilling, the impacts of technological advances in high angle and horizontal drilling, and the importance of new production from shale. In addition, an in-depth discussion is included on well control model planning considerations for completions, along with detailed calculation examples using Mathcad. This book will update the petroleum and drilling engineer with a much-needed reference to stay on top of drilling methods and new applications in today's operations. Provides key drilling concepts and applications, including unconventional activity and directional well by gas drilling Updated with new information and data on managed pressure drilling, foam drilling, and aerated fluid drilling Includes practical appendices with Mathcad equation solutions

Air and Gas Drilling Manual

Including the papers of the Woodlands and Technical Sections of the CPPA.

Human-Centered Design for Mining Equipment and New Technology

Quality Today

Chemical Engineering Progress

Proceedings of the Technical Conference

This book introduces Human-Centered Design (HCD) and outlines the benefits of the approach for mining equipment and new technology. It is a process that aims to make equipment and systems more usable and acceptable by focusing on the end user, their tasks, their work environment, or use context. This process requires that users and other stakeholders are involved throughout the design and development process of the equipment or system. To date, HCD has not been widely applied to the design, development, and deployment of mining equipment or new technology.
