Revealing essential roles of the tumor microenvironment in cancer progression, this book provides a comprehensive overview of the latest research in the field. A variety of topics are covered, including metabolism in the tumor microenvironment, stellate cells and endothelial progenitors in the tumor microenvironment, as well as the effects of HIV, viral hepatitis, and inflammation in the tumor microenvironment, and more. Taken alongside its companion volumes, Tumor Microenvironment: State of the Science updates us on what we know about various aspects of the tumor microenvironment, as well as future directions. This book is essential reading for advanced cell biology and cancer biology students as well as researchers seeking an update on research in the tumor microenvironment.

An exciting new series that covers the five Paper 2 topics of the IB 20th Century World History syllabus. This coursebook covers Paper 2, Topic 1, Causes, practices and effects of wars, in the 20th Century World History syllabus for the IB History programme. It is divided into thematic sections, following the IB syllabus structure and is written in clear, accessible English. It covers the following areas for detailed study: First World War (1914-18); Second World War (1939-45); Asia and Oceania: Chinese Civil War (1927-37 and 1946-9); and Europe and Middle East: Spanish Civil War (1936-9). Tailored to the requirements and assessment objectives of the IB syllabus, it allows students to make comparisons between different regions and time periods.

This volume presents the most current theoretical advances in the fields of social marketing and public health communications. The volume is divided in two parts. Part 1 contains chapters pertaining to research and theory reflecting improvements and contributions to theories that help improving quality of life. It includes literature reviews, conceptual research and empirical studies on social marketing communications, models to understand individual's risky behaviors, and how to improve social interventions. The second part emphasizes applied research, consisting of best practices, applied experiments, and case studies on social marketing innovative practices with implications for quality of life.

As the muscle car wars developed in the early 1960s, auto manufacturers scrambled to find catchy marketing campaigns to entice the buying public into their dealerships. General Motors, Ford, and Chrysler, with all their divisions, as well as AMC and Studebaker, inevitably sank billions of dollars into one-upmanship in an effort to vie for the consumer's last dollar. Automotive writer Diego Rosenberg examines the tactics and components used by manufacturers in waging war against one another in the muscle car era. Manufacturers poured millions into racing programs, operating under the principle of "Win on Sunday, Sell on Monday." Cars were given catchy nicknames, such as The GTO Judge, Plymouth Roadrunner, Cobra, and Dodge Super Bee. Entire manufacturer lines were given catchy marketing campaigns, such as Dodge's Scat Pack, AMC's Go Package, and Ford's Total Performance. From racing to commercials to print ads, from dealer showrooms to national auto shows, each manufacturer had its own approach in vying for the buyer's attention, and gimmicks and tactics ranged from comical to dead serious. *Selling the American Muscle Car: Marketing Detroit Iron in the 60s and 70s* takes you back to an era when options were plentiful and performance was cheap. You will relive or be introduced to some of the cleverest marketing campaigns created during a time when America was changing every day.

This is a fully revised, new edition on the topic of instrumentation and control systems and their application to marine engineering for professional trainees studying Merchant Navy Marine Engineering Certificates of Competency (CoC) as well as Electrical/Marine Engineering undergraduate students. Providing generic technical and practical descriptions of the operation of instrumentation and control devices and systems, this volume also contains mathematic analysis where appropriate. Addressing this subject area, the domain of Instrumentation Engineers/Technicians as well as Control Engineers, and covering established processes and protocols and extensive developing technology, this textbook is written with the marine engineer in mind, particularly those studying Engineering Knowledge. The content ranges from simple

measurement devices, through signal conditioning and digitisation to highly sophisticated automated control and instrumentation systems. It also includes a brand new section on electrical equipment in hazardous areas detailing hazards, gas groups, temperature classifications and types of protection including increased and intrinsic safety and encapsulation, and up-to-date material on the new generation of Liquefied Natural Gas carriers, SMART sensors and protocols, as well as computer based systems.

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

## **Britain's Winning Formula**

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key Features A go-to guide to help you master AI algorithms and concepts 8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillance Use TensorFlow, Keras, and other Python libraries to implement smart AI applications Book Description This book will be a perfect companion if you want to build insightful projects from leading AI

domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learn Build an intelligent machine translation system using seq-2-seq neural translation machines Create AI applications using GAN and deploy smart mobile apps using TensorFlow Translate videos into text using CNN and RNN Implement smart AI Chatbots, and integrate and extend them in several domains Create smart reinforcement, learning-based applications using Q-Learning Break and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book
