Pension Finance

Essentials of Investments

In the past several decades, pension plans have become one of the most significant institutional influences on labor and financial markets in the U.S. In an effort to understand the economic effects of this growth, the National Bureau of Economic Research embarked on a major research project in 1980. Issues in Pension Economics, the third in a series of four projected

volumes to result from this study, covers a broad range of pension issues and utilizes new and richer data sources than have been previously available. The papers in this volume cover such issues as the interaction of pension-funding decisions and corporate finances; the role of pensions in providing adequate and secure retirement income, including the integration of pension plans with social security and significant drops in the U.S. saving rate; and the incentive effects of pension plans on labor market behavior and the implications of plans on labor market behavior and the implications of plans for different demographic groups. Issues in Pension Economics offers important empirical studies and makes valuable theoretical contributions to current thinking in an area that will most likely continue to be a source of controversy and debate for some time to come. The volume should prove useful to academics and policymakers, as well as to members of the business and labor communities.

Essentials of Investments

Pensions in the U.S. Economy is the fourth in a series on pensions from the National Bureau of Economic Research. For both economists and policymakers, this volume makes a valuable contribution to current research on pensions and the economics of the elderly. The contributors report on retirement saving of individuals and the saving that results from corporate funding of pension plans, and they examine particular aspects of the plans themselves from the employee's point of view. Steven F. Venti and David A. Wise offer a careful analysis of who contributes to IRAs and why. Benjamin M. Friedman and Mark Warshawsky look at the reasons more retirement saving is not used to purchase annuities. Personal saving through pension contribution is discussed by B. Douglas Bernheim and John B. Shoven in the context of recent government and corporate pension funding changes. Michael J. Boskin and John B. Shoven analyze indicators of the economic well-being of the elderly, addressing the problem of why a large fraction of the elderly remain poor despite a general improvement in the economic status of the group as a whole. The relative merits of defined contribution versus defined benefit plans, with emphasis on the risk aspects of the two types of plans for the individual, are examined by Zvi Bodie, Alan J. Marcus, and Robert C. Merton. In the final paper, pension plans and worker turnover are the focus of the discussion by Edward P. Lazear and Robert L. Moore, who propose pension option value rather than the commonly used accrued pension wealth as a measure of pension value.
