Nothing is quite as thrilling as watching superior athletes do the seemingly impossible. From Doug Flutie's "Hail Mary" pass to Lance Armstrong's record-breaking climb of Alp d'Huez to David Beckham's astounding ability to bend a soccer kick, we marvel and wonder, "How did they do that?" Well, physics professor John Eric Goff has the answers. This tour of the wide world of sports uses some of the most exhilarating feats in recent athletic history to make basic physics concepts accessible and fun. Goff discusses the science behind American football, soccer, cycling, skating, diving, long jumping, and a host of other competitive sports. Using elite athletes such as Greg Louganis and Bob Beamon as starting points, he explains in clear, lively language the basic physical properties involved in amazing and everyday athletic endeavors. Accompanied by illustrations and mathematical equations, each chapter builds on knowledge imparted in earlier portions of the book to provide a firm understanding of the concepts involved. Fun, witty, and imbued throughout with admiration for the simple beauty of physics, Gold Medal Physics is sure to inspire readers to think differently about the next sporting event they watch.

TASER® Conducted Electrical Weapons are rapidly replacing the club for law-enforcement control of violent subjects within many countries around the globe. A TASER CEW is a hand-held device that delivers a 400-volt pulse with a duration tuned to control the skeletal muscles without affecting the heart at a distance of up to 6.5 meters over tiny wires. If necessary, it begins with an arcing voltage of

50,000 V to penetrate thick clothing; the 50,000 V is never delivered to the body itself. Due to the widespread usage of these devices and the widespread misconceptions surrounding their operation, this book will have significant utility. This volume is written for cardiologists, emergency physicians, pathologists, law enforcement management, corrections personnel, and attorneys.

Army Doctrine Reference Publication (ADRP) 7-0, Training Units and Developing Leaders, augments fundamental principles discussed in Army Doctrine Publication (ADP) 7-0, Training Units and Developing Leaders. Both ADP 7-0 and ADRP 7-0 support the doctrine established in ADP 3-0 and ADRP 3-0. Army units will face a complex operational environment shaped by a wide range of threats, allies, and populations. Rapid advances in communications, weapons, transportation, information technologies, and space-based capabilities make it a challenge to just stay even with the pace of change. Because Army units face a wide mix of challenges-from strategic to tactical-they must develop leaders to conduct unified land operations anywhere in the world in any operation across the conflict continuum. Army training prepares units and leaders to be successful through challenging, realistic, and relevant unit training and leader development at home station, at the combat training centers, and in the schoolhouses.

## **TASER® Conducted Electrical Weapons: Physiology, Pathology, and Law**

This guidebook presents a new and comprehensive organizational model for the institutionalization of effective crime reduction strategies into police agencies, called the Stratified Model of Problem Solving, Analysis, and Accountability (i.e., "Stratified Model"), along with the specific mechanisms, practices, and products necessary to carry out the approach in any police agency, no matter the size or the crime and disorder levels. Consequently, the purpose of the guidebook is to present the Stratified Model in a succinct and practical way in order to provide direction for institutionalizing effective crime reduction strategies and accountability. The goal is to discuss the applicability of the problem solving process and accountability procedures as well as present relevant analytical products that can immediately be used to systematically implement crime reduction strategies. Although any police leader will find this guide informative, it is mainly written for police managers and commanders who are seeking to improve the efficiency, effectiveness, and accountability of their agency's crime reduction efforts. It will also be most useful to those with an understanding of basic organizational change and leadership principles and methods. This guidebook is not a primer to police leadership nor does it provide instruction on how to enact organizational change in a police agency. It simply presents an effective model that can be used as a template for systematizing crime reduction strategies,

analysis products, and accountability processes. A model based on the assumptions that problem solving is an effective process for addressing simple and complex problems, that crime reduction strategies can and should be guided by analysis, and that an accountability structure is imperative for enacting and sustaining change in a police agency. The guidebook first presents the foundations and elements of the Stratified Model, then provides guidelines for implementing crime reduction strategies at different levels and evaluation of these efforts, as well as an organizational structure of accountability. Although the objective is to implement all aspects of the Stratified Model, an agency may choose to implement parts of the model as appropriate or to implement the model in phases. As a result, the guidebook provides a separate discussion of how problem solving, analysis, and accountability occur at each level of crime reduction—immediate, short-term, and long-term—that is followed by a discussion of evaluation and an organizational structure of accountability that would be used if all levels of crime reduction are implemented simultaneously. At the end of the guide, the information is synthesized into a table illustrating a framework that can be easily adapted for agencies that seek to tailor the model and implement it into their own organizational structure.

### **Crime in the United States 2012**

This fascinating and original book is the first to analyse the evolution of internal security policy and external defence policy in Ireland from independence to the present day. Professor O'Halpin examines the very limited concept of external defence understood by the first generation of Irish leaders, going on to chart the state's repeated struggles with the IRA and with other perceived internal and external threats to stability. He explores the state's defence and security relations with Britain and the United States and, drawing extensively on newly released records, he deals authoritatively with problems of subversion, espionage, counterintelligence and codebreaking during the Second World War. In conclusion, the book analyses significant post-Second World War developments, including anti-communist co-operation with Western powers, the emergence of UN service as a key element of Irish foreign and defence policy, the state's response to the Northern Ireland crisis since 1969, and Ireland's difficulties in addressing the collective security dilemmas facing the European Union in the post-Cold War era. It is essential reading for anyone wishing to understand the development of independent Ireland since 1922.

Police leaders have sought alternatives to lethal force and better methods to subdue individuals to limit injuries and death. In recent years, electro-muscular-disruption technology, also known as conducted energy devices (CEDs), have become the less-lethal weapon of choice for many law enforcement agencies. CED uses a high-voltage, low-power charge of electricity to induce involuntary muscle contractions that cause temporary incapacitation. However, a significant number of individuals have died after exposure to a CED. Some were normal healthy adults; others were chemically dependent or had heart disease or mental illness. This study addresses whether CEDs can contribute to or cause mortality and if so, in what ways.

Completely revised to cover recent events and research, the Third Edition of *The New World of Police Accountability* provides an original and comprehensive analysis of some of the most important developments in police accountability and reform strategies. With a keen and incisive perspective, esteemed authors and policing researchers, Samuel Walker and Carol Archbold, address the most recent developments and provide an analysis of what works, what reforms are promising, and what has proven unsuccessful. The book's analysis draws on current research, as well as the President's Task Force on 21st Century Policing and the reforms embodied in Justice Department consent decrees. New to the Third Edition: The national crisis over police legitimacy and use of force is put into context through extensive discussions of recent police shootings and the response to this national crisis, providing readers a valuable perspective on the positive steps that have been taken and the limits of those steps. Coverage of the issues related to police officer uses of force is now the prevailing topic in Chapter 3 and includes detailed discussion of the topic, including de-escalation, tactical decision making, and the

important changes in training related to these issues. An updated examination of the impact of technology on policing, including citizens' use of recording devices, body-worn cameras, open data provided by police agencies, and use of social media, explores how technology contributes to police accountability in the United States. A complete, up-to-date discussion of citizen oversight of the police provides details on the work of selected oversight agencies, including the positive developments and their limitations, enabling readers to have an informed discussion of the subject. Detailed coverage of routine police activities that often generate public controversy now includes such topics as responding to mental health calls, domestic violence calls, and police "stop and frisk" practices. Issues related to policing and race relations are addressed head-on through a careful examination of the data, as well as the impact of recent reforms that have attempted to achieve professional, bias-free policing.
