After the Spirit Comes is for the Christian who wants the fullest possible life in Christ. This book answers the question, "What can a person expect after the Holy Spirit has indwelt his life-not only after conversion, but after being filled with the Spirit?" Jack Taylor moves from the Spirit-filled life experience to give guidance in several areas. He stresses the basics of the Christian life--Bible reading and prayer, but goes into depth concerning the expectations of that life. After the Spirit

Comes puts the Spirit-filled life in full Biblical focus. It guards the believer from becoming "at ease in Zion," and emphasizes living a balanced life for Christ. After the Spirit Comes is among Jack Taylor's favorite books. When asked why he replies, "I had more fun writing it than most. I hid myself in a lovely place by a rushing river and I seemed to be floating on a cloud during the duration of its writing. It contains some of my most joyous principles of life from the Word. This is a life-changing book for me, and I believe it will change your life as well! Oh yes, there is another reason. It contains the most popular sermon that I have preached: The Rod of God." Enjoy this message and a dozen other classics by Jack Taylor.

But Malley will not go down without a fight. She's determined to rally her fellow students to form a rebellion of their own. The government can lock these girls up in reform school. Whether it can break them is another matter entirely...

Tuesday Apocalypse

An innovative fuselage design approach that combines many desirable operational features with a simple and efficient structural approach is being developed by NASA. The approach, named METAShield for METallic TransAtmospheric Shield, utilizes lightly loaded, hot aeroshell structures surrounding integral propellant tanks that carry the primary structural loads. The aeroshells are designed to withstand the local pressure loads, transmitting them to the tanks with minimal restraint of thermal growth. No additional thermal protection system protects the METAShield, and a fibrous or multilayer insulation blanket, located in the space between the aeroshell and the tanks, serves as both high temperature and cryogenic insulation for the tanks. The concept is described in detail, and the performance and operational features are highlighted. Initial design results and analyses of the structural, thermal, and thermal-structural performance are described. Computational results evaluating resistance to hypervelocity impact damage, as well as some supporting aerothermal wind tunnel results, are also presented. Future development needs are summarized.
