Traffic Engineering: Theory and Practice  
Transactions of the Institution of Civil Engineers of Ireland  
Traffic Accident Investigators' Handbook  
The Municipal Year Book  
Traffic Control  
American Book Publishing Record  
Cumulative, 1950-1977  
Technical Traffic Accident Investigators' Handbook  
One Way Business Streets  
Business Service Bulletin  
Traffic Engineering Handbook  
Elements to be Considered in Eliminating Railroad-highway Grade Crossings, Allocating Cost of Construction and Enlargement of Separations,  
Evaluating the Accident Hazard and Determining the Relative Benefits  
Use of Shoulders and Narrow Lanes to Increase Freeway Capacity  
Solutions to the Problem of Merchandise Pickup and Delivery in Business Districts  
Effect of Control Devices on Traffic Operations  
Landscape Architecture  
Highway Traffic Estimation and Road User Benefit Analysis  
Fundamentals of Traffic Engineering  
Analysis of Traffic Movements at Rural Intersections  
Bibliography on Automobile Parking in the United States  
Origin-destination Surveys and Traffic Volume Studies  
A Bibliography of Highway Planning Reports  
Manual of Traffic Engineering Studies  
Illuminating Engineering  
Roads and Road Construction  
Year Book and Directory  
Traffic Digest  
Psychology and Ground Safety  
Transportation and Traffic Engineering Handbook  
Traffic engineer's technical notebook  
Library of Congress Catalogs  
Manual of Traffic Engineering Studies  
Traffic engineering guide for cities under 50,000

Traffic Engineering

### **Traffic Engineering: Theory and Practice**

### **Transactions of the Institution of Civil Engineers of Ireland**

### **Traffic Accident Investigators' Handbook**

Emphasizes the major elements of total transportation planning, particularly as they relate to traffic engineering. Updates essential facts about the vehicle, the highway and the driver, and all matters related to these three principal concerns of the traffic engineer.

### **The Municipal Year Book**

### **Traffic Control**

### **American Book Publishing Record Cumulative, 1950-1977**

## **Traffic Digest**

At the close of the year 1900, motor vehicle registrations throughout the United States totaled 8000. These vehicles rode on unpaved and often dusty country roads. The only problem of traffic was an occasional pedestrian or a frightened horse or cow frenzied by the roar of this new creature. Today more than 82,000,000 registrations, representing 50% of the world's automobiles, are recorded in this country. In 1963 these vehicles traveled 798 billion miles over newly constructed modern highways, expressways, freeways, quickways, and thru ways, as well as improved rural and urban roads and streets. Out of all this has sprung the traffic engineer. Today's modern roadway is an engineering structure which has been developed through sound principles of design with provisions for safety and efficiency. An example of this safety factor can be found by the exacting

specifications for cross sections, grades, roadside control, medians, and other design features. For many years, the responsibility for controlling traffic fell naturally into the domain of the police. However, as traffic increased, many problems developed which were beyond the scope of normal police work. Since the highway system is an engineering structure which requires an engineering approach to appraise operating problems and engineering techniques to solve them, the traffic engineer came into being.
